

GRIGORY GRABOVOY

Methods of promoting Grigori Grabovoy's works in social networks

2006

This book provides 60 methods of promotion. Each method provides management systems for promoting the field of information containing the works of Grigory Petrovich Grabovoy in the form of video recordings of his seminars, in the form of audio recordings and in the form of book texts. Also, when promoting, you can separately consider the management of promoting books in printed form, books on the Internet in electronic form, video works and audio recordings.

Method 1.

In this method, it is necessary to consider the position of perception of some events of the past and use these events as a positive experience so that they become the basis for promotion. For example, you can consider such a management system when you pass on some information to someone, and this information returns to you in an even greater volume favorable to you. It should be taken into account that the goal of promoting works should be realized constantly, that is, in your eternal life

- all people, and therefore the return of any information, it also has an infinite character in management.

For promotion in the social network "Facebook" you can use the digital series 914218917218. In this version of using the digital series, you need to mentally connect the first number of the series with the network address with a luminous segment

"Facebook" on the Internet, and with the first letter of the address. The address in this case also includes the symbols "three doubles in" (www). It turns out that in this case the first number 9 is connected by this segment of light with the first symbol - "double in" (w).

To promote on the social network "Twitter" you need to consider the option of using the following row - 498714819391, and in this case the number 1, which ends the row, must be mentally connected with a luminous segment with the address on the Internet social network "Twitter".

For promotion in the social network "VKontakte" you can also use a white glowing segment, mentally imagine that it connects the first number of the series with the address of the social network "VKontakte" on the Internet. The number series is as follows - 498741.

In general, management can be carried out in a generalized manner for promotion in each of the social networks simultaneously. For this, you can consider the addresses standing next to each other. That is, for example, "three doubles in facebook com" www.facebook.com, then

"three doubles in twitter com" www.twitter.com and then "three doubles in vkontakte ru" www.vkontakte.ru.

When managing, use a method that is implemented in terms of managing perception, for example, when speaking addresses. You can take into account that to speed up managing, when you perceive an address, you can skip the period. That is, if you, for example, perceive "three doubles in dot facebook dot com"

"www.Facebook.com", then the managing time slows down. If you perceive simply "three doubles in facebook com" "www.Facebook.com", then the managing time on the network speeds up.

Slowing down the time of management, it is also advisable to consider the nearest area of information and transfer in management to other forms, which, for example, are themselves targeted or go to large social networks to search for a target audience. Also considering a social network in the perception of "three doubles in dot twitter dot com" "www.Twitter.com", you can through slowing down go to the largest social networks others that are in the world.

When managing the social network "VKontakte" acceleration occurs in the following version of perception: "three doubles in dot vkontakte ru" "www.vkontakte.ru" - the control speed is maximally

high for the future and for remote areas of the Internet. When controlling through the perception of "three doubles in dot v kontakte dot ru"

"www.vcontacte.ru" - there is an increase in speed in the nearest areas, Internet areas. If you consider, perceive, mentally pronounce without periods, for example, "three doubles in vkontakte ru www.vcontacte.ru, then there is control in some separate areas of this network.

It turns out that if you want to work with individual variants, as if to work impulsively, then you need to perceive this address without dots. In general, the described method of acceleration and deceleration with a separate selection of control is also applicable to Internet addresses with other names.

When working in social networks, try to use other social networks on the Internet in North America, Canada, Great Britain, Germany, Europe, South and Central America, Asia.

Special control technique can be used in widespread networks in China. A separate control method can be the use of various networks with a Russian-language interface that corresponds to the original works.

After managing the social networks "Facebook",

"Twitter", "VKontakte" you can add a management area related to "Live Journal" (www.livejournal.com). That is, create an account, a page in "Live Journal" and manage through "Live Journal" to coordinate management in relation to information contained in the social networks "VKontakte", "Twitter" and "Facebook".

At the same time, in LiveJournal you can post, for example, a description of video works, and in Facebook you can post advertising of text works and, for example, on Twitter, briefly indicate what the advantage is for a specific target audience.

Method 2.

You can use technology when you consider all past events based on information from the past, combine them as if with future events and receive a control circuit that concerns you personally and the whole world in the direction of eternal development.

For the social network "Facebook" the control digital row is as follows - 5186147198. In this case, the concentration is carried out to a greater extent on the number ending the row - 8, and it is presented in silver color.

For the social network "Twitter" the digital series is 49167848.

In this case, the concentration is carried out for a longer period on the numbers ending the series – 4 and 8.

For the social network "VKontakte" the digital series is 539614. In this case, the concentration is carried out to a greater extent on the first number of the series - 5. After this concentration, you should fully perceive what you have placed in this network, evaluate the overall volume of information, how effectively it is promoted.

For the social network "Live Journal" the digital series is 498741. At the same time, in this concentration, when you produce it, try to examine the nearby management areas at the information level.

Method 3.

To implement this method, consider the possibility of managing for the purpose of promoting works, which is also sought by those people whom you do not yet know online, but at the same time they have at the management level the correct, already now manifested orientation towards eternal life.

Looking at this management, you can see that everyone, naturally, has this specific orientation embedded in the soul of a person, but you first of all choose the category that can quickly connect to the idea of realizing eternal life, and then through them you pass it on to everyone else. In this way, you build a management system that is based on an indefinite circle of people who can help you and make management more effective and intensive.

For the social network "Facebook" the digital series in this case is 519648718.

For the social network "Twitter" in this case the digital series is 216.

For the social network VKontakte, the digital series is 594754.

For the social network LiveJournal – 31649874181.

Method 4.

From the point of view of general management information for endless eternal development, for the realization of eternal life of all, an assessment of the state of the Internet as a whole is made. That is, you consider the entire Internet space as an area of information, mobile, really operating, with lively information distribution systems, and at the same time you immediately cover the situation that is happening all over the world. And, based on this, you find some areas on the Internet that are most relevant from the point of view of eternal development. In this case, management by numerical series is as follows:

For the social network "Facebook" - 918914 849715. When you consider the option of a gap, then here you should perceive the entire Internet network and connection with the entire outside world as a whole.

For the social network "Twitter" - 519617.

For the social network "VKontakte" management - 581491.

For the social network "Live Journal" management - 69749871.

At the same time, through the Live Journal, you can add a control system for Facebook and Twitter, simply adding a digital row - 498718.

Method 5.

Considering past events as a system of your self-development, you can see such a structure in the past that, for example, having considered your ten-year age, having looked at what children are around you, try to listen to what they say. As you, for example, could do in the past. Here you need to apply the same principle when working with numerical series in relation to social network management. Try to catch the element of the greatest network activity by ear, as if listening to the network and then, based on this platform, use the following numerical series:

For the social network "Facebook" - 519671498 84.

For the social network "Twitter" - 317581398641719.

At the same time, on Twitter you can create two or more accounts under different logins. In each case, when you choose a pseudonym for work on a social network, you must understand that you, as the author of texts promoting the works of Grigory Grabovoy, have the right to your literary pseudonym. It can be called a nickname, login, you can inform it with additional promotion systems. Specially concentrate on various technologies of the Teachings of Grigori Grabovoy to promote this information in relation to the pseudonym that you use on the network.

For work on the network, it is advisable to choose a pseudonym that has the highest control speed, the speed of spiritual control on the network, and to distribute control to everything
an endless future to ensure eternal life for all.

For the social network "VKontakte" in this case it is necessary to make a control that uses the following digital row in the conditions that the row is perceived as a whole and you simultaneously read it from left to right, the next row is 4965187198.

For LiveJournal the row is as follows: 45161.

Method 6.

When you look at past events, you need to consider their connection with future and distant consequences that concern you. In this regard, you work through future events that are favorable for everyone. You can use, on this basis, the following number series:

For the social network "Facebook" - 51649871.

For the social network "Twitter" - 58969458.

For the social network VKontakte – 53161875.

For the social network "Live Journal" - 49781317.

Method 7.

When you consider your past events, when you evaluate future events and some consequences leading from them, and consider yourself in the present tense, you can remember some period, for example, fifteen years of age, or imagine this age, if, for example, you abstract from your own events. Here you can see that when you give, for example, a treat to someone, then you put the life of another person into this treat. Extend this life to the entire infinite future and try to take into account all external events. On this platform, the control is as follows:

For the social network "Facebook" - 51431871. At the same time, "Facebook" you can create three, for example, accounts, where one supports each next one, that is, a system of mutually supporting accounts. At the same time, when using, for example, different pseudonyms, it is quite possible to make the management somewhat generalized:

For the social network "Twitter" the digital series is 61431981. For the social network "VKontakte" the digital series is 516478. For the social network "Live Journal" - 56471874.

Method 8.

When you consider through your perception such a characteristic of a person as an eighteen-year-old person, and there you consider protection from actions that may be happening around, then you can transfer the method of protection that you could develop at this age to the control system through social networks. At the same time, the works of Grigory Grabovoy, which are used to protect and save everyone for the implementation of eternal life, can be carried out in control, using the principle of preliminary protection of control systems. For this, you can use the following row in the social network "Facebook" - 49854121861.

For the social network "Twitter" the digital series is 51961481.

For the social network VKontakte, the digital series is 58431864.

For the social network LiveJournal, the digital series is 51874931.

When you create accounts in each of the social networks and show advertising of works, then here you can link the general concept of advertising in promotion into the infinite future on the management. To do this, you need to lay the interest of the next listeners, readers, create mailings, increase the system of regular readers and in every possible way maintain interest by, for example, publishing in the accounts of various most interesting texts, quotes from works. At the same time, the principle of promotion should be is equivalent in relation to each work. When highlighting the most popular works, for example, new ones, it is necessary to show that in all previous works, since they are part of the program of teaching eternal life, there is also what is necessary, and it is desirable to highlight this necessary.

Method 9.

When you evaluate past events from the point of view of the present and, for example, consider the age of two years of a person, then you can think of such a situation that you can hear about this age from a third person, what the person did at this age. So, at the age

of two years, the person also perceived himself. And superimpose this information of the person and what was said about him.

Thus, using this approach, it is possible to superimpose information from one network on another and obtain a difference in perception. Participants of one network are oriented in a certain way toward the implementation of certain projects within the network.

In order to reconcile their opinions regarding the works of Grigori Grabovoy, it is necessary to use the following series, which clearly show all participants of the network, all people who are not only in the network, but may not touch these networks, that the Teaching realizes eternal life.

In this case the concentrations are as follows:

On the social network "Facebook" - 51964189871.

On the social network Twitter – 53149861871. On the social network VKontakte – 53184158. On the social network LiveJournal – 61971.

When implementing the methods, it is clear that it is necessary to implement promotion through a specific account, that is, it is necessary to open at least one account in each network, and at the same time, other networks can already be such that you can also open accounts in them or just on them

refer. This approach in the methodology of management through these four social networks, when the obligatory level is opening accounts, accelerates management. It is necessary to develop a position when there is some general approach that implements the management structure so that you synchronize management with other accounts through which the promotion of Grigori Grabovoy's works occurs.

You can also consider the legal basis for management, which consists in the fact that it is necessary to bring the situation to the point that the works of Grigory Grabovoy are sold through the websites of legal entities or individuals who have a license to use the works of Grigory Grabovoy. It is possible to offer the owners of those websites that do not have licenses to use the works of Grigory Grabovoy, but express a desire to distribute the works or have already posted the works, to obtain a license from persons who have the right to licensedly distribute the works of Grigory Grabovoy, for example, to obtain a sublicense. This management for compliance with copyright must be

carried out in order to exclude inaccuracies in unlicensed works, since unlicensed works are also characterized by the fact that the source of their origin and how accurately the texts are presented are unknown. Therefore, it turns out that it is necessary, of course, to constantly implement management for the distribution of licensed works, since in the Teachings of Grigory Grabovoy the accuracy of the information distributed is important, especially in such systems as, for example, aircraft diagnostics; as methods that are aimed at quickly achieving results in some extreme situations, and so on. In rescue systems, accuracy or instant mastery of experience or information is often required, so here licensing of works provides guarantees that a person gets the exact text that corresponds to the originals: audio recordings, video recordings, texts - which Grigory Grabovoy personally created.

When working with accounts, you can use the technology of building future events based on the methods and techniques of the Teachings of Grigory Grabovoy, such that you build future events so that the implementation of promotion is carried out through licensed sites. When viewing future events, you need to connect these management systems.

Method 10.

In this method, it is necessary to consider events related to the past in such a way as to see that if there are sudden actions from external factors of information of the past, then these actions should be controlled from two areas: from an earlier element of the past and the subsequent future in relation to this event. Having received such a peculiar arc, where in the center of this segment of the arc is the present event, it can be connected in a certain circle. Then it turns, this arc, into a sphere. Inside are all the unwanted events, and on the sphere are already the events that are needed. Thus, it is possible, proceeding from the external sphere, connecting these information rays to the names of accounts, to carry out control. In this case, the strengthening of control occurs when adding the following digital series to the names of social networks:

For the social network "Facebook" - 519491 619.

For the social network "Twitter" - 719841.

For the social network VKontakte – 514318.

For the social network LiveJournal – 514941.

Method 11.

This method requires evaluating past events so that they relate not only to social network accounts,

which you are engaged, but also all events in general. The digital series are as follows:

For the social network "Facebook" - 614715.

For the social network "Twitter" - 814519.

For the social network VKontakte – 617489.

For the social network LiveJournal – 518.

When organizing accounts in these social networks, numerical series can be inserted into account names. There are two ways to use numerical series: either the entire numerical series or the first five digits of the numerical series.

Method 12.

When working with time information in this method, it is necessary to concentrate all projections coming from the future and from past times at the present time. Therefore, the point of the present is such that the rays from the most necessary events of the future, and from the most vivid remembered events of the past fall into one point of the present. At the same time, this point moves to highlighting the names of social networks. The numerical series corresponding to these social networks are as follows:

For the social network "Facebook" - 514819617.

For the social network "Twitter" - 593841518.

For the social network VKontakte – 318647518.

For the social network "Live Journal" - 598741219.

Method 13.

When working in this method, events related to the age of eleven can be linked to events of the age of fifteen and the age of twenty-one for a person and similar characteristics can be seen in the reaction. That is, to consider how consciousness develops depending on age, and in the goal of eternal development, eternal life, it is necessary see that the development of consciousness is constant, but at the same time, in each level of consciousness corresponding to any age, there is always the entire methodological level for the implementation of eternal life. Based on the fact that everyone has the implementation of eternal life, you can always get in touch with the entire audience in social networks. At this level, implement management for the promotion of the works of Grigory Grabovoy, where methods are clearly presented on how each person can promote. For this, you can use various quotes from the books of Grigory Grabovoy, some of the most striking reviews of books, and so on.

The number series for social networks are as follows: For the social network "Facebook" - 51487851961. For the social network "Twitter" - 614819.

For the social network VKontakte – 589741.

For the social network LiveJournal – 31978.

Try to analyze the numbers in these rows, and you can see how networks function based on the general digital laws of information development.

Method 14.

In this method, information from the past can be connected with the future so that only positive events of the future are visible, and they are realized in the eternal life of a person. In this case, one can consider the age of fourteen years of a person, when a person, for example, has certain needs, and see that these needs are resolved in the future. This system of resolving needs is applicable to social networks, where it is necessary to show that a person's need for eternal life, which God has placed in a person, can be realized through the works of Grigory Grabovoy. For this, the following management systems in social networks can be used:

For the social network "Facebook" - 318618.

For the social network "Twitter" - 514219718 648719 81.

For the social network VKontakte – 518319.

For the social network LiveJournal – 614517.

When creating an account in each version of the social network, you need to conduct such management on these rows before creating an account. Also, immediately after creation, and before starting work, it is advisable to use these rows, that is, mentally pronouncing them or simply perceiving them, or conducting concentration on them.

Method 15.

In this method, it is important to consider that the principle of management that you produce is generalizing. Regardless of age, a person always has an element of generalization. With the eternal development of a person, this element of generalization develops so that a specific technology appears. Here it is necessary to show the features from this point of view positive in the work of Grigory Grabovoy. That the accumulation of information gives the following information, which can be distributed on a very large and powerful level in management in the direction of eternal development. For this, it is necessary that people read at least for a start the basics from some works, then combine them into a system and receive a

systemic education on the Teachings of Grigory Grabovoy based on his works. The digital series with such a position in the management platform for social networks is as follows:

For the social network "Facebook" - 819641 718.

For the social network "Twitter" - 518014561.

For the social network VKontakte – 73484189.

For the social network LiveJournal – 518 414.

When promoting works through licensed sites, you need to display the coordinates of these sites on your accounts; show forums and promote them in

in accordance with the legislative systems that exist in society; and refer to the observance of copyright; that creative information cannot be limited in distribution; and other constitutional and national, general social, international norms. When promoting in social networks, it is also necessary to control that network participants comply with the rules that are accepted as the norms of communication in the network.

Method 16.

In this method, it is possible to immediately extend the development of a person, starting from one year, even from an earlier age, to infinity. The feeling of joy that arises from endless eternal life and which is projected into the earliest age is like a certain column of information that comes from a person to infinity. At the level of this joy, it is possible to spread the Teaching of Grigory Grabovoy through his works with a very good joyful worldview. At the same time, for social networks, the following number series can be used on this platform:

For the social network "Facebook" - 51649871.

For the social network "Twitter" - 31951864.

For the social network VKontakte – 31878958.

For the social network "Live Journal" - 584319718.

Method 17.

In this method, it is possible to use such reaction information from the past that only positive impulses come to the present, and they seem to screen the actions of the past. And in this case, the digital series is as follows:

For the social network "Facebook" - 51481931721.

For the social network "Twitter" - 61874851964.

For the social network VKontakte – 513584.

For the social network LiveJournal – 31971.

Method 18.

In this method, you can translate events of the distant future to understanding your future in the present, past time. For this, you can imagine the age, for example, eighteen years, twenty-eight years of some person. See that a ten-year interval allows you to accumulate the knowledge that is sufficient to transform information in the best direction and in such a way that there is a provision for eternal life. These reflections in the form of an area of information can be perceived as a certain sphere of information, a mass of bright information. This mass can be mentally connected to the names of social networks so that they are saturated.

So that this information flows into these social networks, fills them with the same volume, while it is preserved at the point where you found it. Then it turns out that those rows that you use in these social networks will be saturated with your experience of transforming the situation into management, ensuring eternal life.

For the social network "Facebook" the number series is
51831961421.

For the social network "Twitter" the number series is 58931861971.

For the social network VKontakte, the number series is 5896871. For the social network LiveJournal, the number series is 31871981.

When organizing accounts, you must use

some promotional materials, for example, advertising of books, audio, video works of Grigory Grabovoy, which are posted on licensed sites in catalogs; texts, for example, for promotion or reviews for promotion, or other materials for promotion. There is always the proposed material on licensed sites

for promotion. It is advisable to use it first of all by simply copying it to your accounts and distributing it in forums, in contacts on social networks. If you add your material, it is advisable to additionally implement it with a number series 618718, so that the general concept is revealed at the level of the promotion structure. Where the idea of eternal life is systematically united, because systematicity in promotion is important.

Method 19.

In this method, it is necessary to consider the events of the past corresponding to the age of nineteen of a person in such a way that a person begins to actively learn about his inner and outer world. In this way, you can go to forums on spiritual development, which are largely prepared and oriented towards promoting the Teaching of Grigory Grabovoy as a spiritual Teaching; where there is physical practice and implementation at the physical level. In this way, you can reach target audiences through social networks. For this, you can use the following number series:

For the social network "Facebook" - 518917 218.

For the social network "Twitter" - 61429871.

For the social network "VKontakte" - 519314 8198

For the social network LiveJournal – 69431981.

Method 20.

In this method, you need to mentally transfer the events of the past corresponding to the age of two to the age of five of a person and see that at the age of five he already perceives the events of the age of two differently. Then, accordingly, in the same way consider the events of the age of thirteen and eighteen, then seventeen. Connecting all these points with a certain ray of light, you see how the information

your real image is transformed and appears, which is in the present time, it appears in the system of connections of the past. In the same way, imagining social networks, you can see that in them the unification of information of the past creates your current image, but which can influence the processes of the past. You can, based on this information basis, use numerical series in order to use information of the past in the networks for the most active promotion of the Teaching of Grigory Grabovoy through his works. Here then will be the following series:

For the social network "Facebook" - 51861431971.

For the social network "Twitter" - 0195986131.

For the social network VKontakte – 85936949871.

For the social network "Live Journal" - 31961851.

Method 21.

In this method, you need to consider such structures of the external world that perceive you. Consider some external object of information, for example, you can consider some other person, another living creature. In this case, this person or another living creature: an animal, a bird - could perceive this person, who is engaged in management, at the age of three. You try to understand the system of perception of other active systems of the world. In this

sense, you can even consider other information of a general plan, for example, information of reaction, interaction of Internet information with a person. Based on this, you can use the following numerical series on social networks, which, on this principle of perception, most actively promote the works of Grigory Grabovoy. Here it is important to highlight the element that relates in general to the Teaching of Grigory Grabovoy about eternal life. The series are as follows:

For the social network "Facebook" - 584319641.

For the social network "Twitter" - 19878951.

For the social network Vkontakt – 314518681.

For the LiveJournal social network – 58431971.

Method 22.

In this method, you can consider such events of the past that concern the present directly in a good sense, and for this you can use, for example, the fourteenth year of a person and from there get a certain glow at the present time. Mostly some positive events of that time, joyful and so on. Based on this, the management by number series will be as follows: representing such an information platform, you produce accordingly concentration on number series when working with your accounts in these networks:

For the social network "Facebook" - 318541219718.

For the social network "Twitter" - 68938151861.

For the social network VKontakte – 39658121978.

For the social network "Live Journal" - 589398741.

Method 23.

In this method, you need to use certain discrete, seemingly unrelated events of the past with the fact that you can already mentally

connect them according to some linear or more complicated theory, build management in the future. Analyzing some of your past elements, for example, related to the age of two, then to the age of fourteen, you can build the following events so that your thinking includes a certain level, which concerned thinking at that time, and what you could now see, what you thought then.

The ability to see what you were thinking at every moment, why you made this or that decision, allows you to predict many actions in social networks that will allow you to be more successful.

actively promote the Teaching from the point of view of correctly explaining at the next level, the next step, how to react to the Teaching, what exactly is desirable in the Teaching to be mastered first by a specific person or a specific Internet community. Here the numerical series will be as follows:

For the social network "Facebook" - 58131961971.

For the social network "Twitter" - 3186871984. For the social network "VKontakte" - 589381. For the social network "Live Journal" - 386498.

Method 24.

In this method, it is desirable to first consider all future information as controlled information. To do this, it is necessary to identify points in past events, for example, corresponding to the age of fourteen or, for example, the age of five, where he controls the entire future, all future events at the level of cognition. And this element of control at the expense of cognition should be extended to numerical series corresponding to social networks:

For the social network "Facebook" - 89356149.

For the social network "Twitter" - 48759381.

For the social network VKontakte – 89384159.

For the social network LiveJournal – 31864178.

In this method, you essentially need to teach people the Teaching - as teaching activity should be - and accordingly, with all the attributes of teaching activity, you explain the material, clarify,

answer questions and in a certain way ask questions about the result of applying the Teaching. Then you somehow put it all together in forums, positive results and teach others on them. You can show some results more clearly, some results you can, for example, leave for your analytics.

Method 25.

In this method, you need to use certain templates that relate to positive information. In the past, evaluate what positive events were and what could be in the future, and see how you interacted in the past, for example, considering some age of fourteen, eighteen years, when you interacted with the past or another person could interact with the past. Consider the age of eighty-nine years and see how a person at that moment interacted with his past and interacts with the future. From here, you must determine how a person should perceive positive events, and convey through social networks that the Teaching of Grigory Grabovoy is a positive event for everyone. Thus, develop this logic through accounts. For this, you can use digital series:

For the social network "Facebook" - 589317491.

For the social network "Twitter" - 61421871.

For the social network VKontakte – 52871931.

For the social network LiveJournal – 52941981.

It can be considered as a technology that relates in a general sense to various completely different networks, in addition to those that are described specifically in the methods for promoting works.

Method 26.

In this method, we can consider a generalized action that accumulates from all known sources of information, primarily from

people's experience. When you consider experience at a great distance from you, it has one way of approaching you, and if it is close, then accordingly faster. Imagine that spheres of information with experience from other people move from far away and from close

information space to you, and try to superimpose them on each other in management. Get a single sphere, generalizing both distant and close experience. Then you will get management, which allows you to act universally, regardless of when the information was created: in the past or in the current time, or will be created in the future. That is, a universal sphere of management, which has a ubiquitous effect and, accordingly, ensures eternal life. The numerical series with this approach are as follows:

For social networks "Facebook" - 51861421971.

For the social network "Twitter" - 31841921981.

For the social network VKontakte – 53949871861.

For the social network "Live Journal" - 5397984571.

Method 27.

In this method, we can consider the principle when what is embedded in the Teaching, the information of the Teaching, it is simultaneously realized. The technology of ensuring eternal life, including the technology of resurrection of the universal and the technology of infinite development, they must be manifested in the presented materials. It is necessary to select materials for your accounts from this position, and then the numerical series are as follows:

For the social network "Facebook" - 53964189171.

For the social network "Twitter" - 31868121978. For the social network "VKontakte" - 58931428151. For the social network "Live Journal" - 361498.

Method 28.

In this method, one can consider very distant events of the future, when everything is fine with everyone, eternal life has been realized for everyone, which includes the realized universal resurrection, and technologies of eternal life have been achieved by everyone.

living. Based on this positive information of the future, which is good for everyone, it is possible to build management in the current time on social networks. In this case, management on numerical series and using the names of social networks is as follows:

For the social network "Facebook" - 318641219718.

For the social network "Twitter" - 51968121981.

For the social network VKontakte – 89549131981.

For the social network LiveJournal – 31971981961.

Method 29.

In this method, all positive information in the world, which is concentrated in a specific action for a specific person, can be used as a basis for control, and on this basis, all negative events can be transformed into ensuring eternal life for everyone.

The numerical series in this case are as follows:

For the social network "Facebook" - 318641218719.

For the social network "Twitter" - 51821871961.

For the social network VKontakte – 51831949871.

For the social network LiveJournal – 5187187194.

Method 30.

In this method, you need to use the assessment of the situation of the past in such a way that you see the future through management systems that guarantee you the achievement of eternal life at any moment in time. Then, when using such a management platform, the numerical series are as follows:

For the social network "Facebook" - 5138948971.

For the social network "Twitter" - 31649875.

For the social network VKontakte – 89458971.

For the social network LiveJournal – 5164981.

Method 31.

In this method, all events that are at the information level and that are possible to implement can be brought into a system that can always be transformed into a positive channel over time and with the presence of desire. By highlighting such a system of desire and time, managing this situation in a social network, it is possible to implement eternal life through the works of Grigory Grabovoy using the following numerical series. Then, with such a management platform, the following numerical series for social networks:

For the social network "Facebook" - 53968121971.

For the social network "Twitter" - 819491.

For the social network VKontakte – 53968129871.

For the social network LiveJournal – 21861.

Method 32.

In this method, you need to evaluate the events of the past in such a way that the impressions of the past are such that control over them now leads to positive results and actions. It leads to the fact that you are constantly acting, essentially improving the past and changing it for the better, receiving results from this in the future. In this case, the numerical series corresponding to social networks are as follows:

For the social network "Facebook" - 318781. For the social network "Twitter" - 84959471. For the social network "VKontakte" - 539681. For the social network "Live Journal" - 819417.

Method 33.

In this method, you can use similarity methods that are used in determining, for example, the properties of information. If you see some information area on the Internet, then you can use similar systems

differentiate this area and already manage, based on some assignment of information to some of its sectors. Then the management with numerical series is as follows:

For the social network "Facebook" - 31721849871.

For the social network "Twitter" - 51421961.

For the social network VKontakte – 3187854.

For the social network LiveJournal – 59481.

Method 34.

In this method, one can use the principle that information from the past intersects with future information in the best parts of the past and thus guarantees a good present. That is, a kind of level of such positivism that uses the dynamics of the future. In this case, the numerical series are as follows:

For the social network "Facebook" - 198742.

For the social network "Twitter" - 318681.

For the social network VKontakte – 598316.

For the social network LiveJournal – 59831.

Method 35.

In this method, it is possible to apply information about the future, which is absolutely wonderful, that is, it is positive for all living, and all living perceive it and understand that they can realize such a future for themselves. With such an information platform, relying on it, management is the following according to the numerical series corresponding to social networks:

For the social network "Facebook" - 193841598.

For the social network "Twitter" - 61401951.

For the social network VKontakte – 53974981.

For the social network "Live Journal" - 581219.

For this method, the following control can be applied, based on the perception of distant areas in one's own consciousness. First, consider the principle that a distant area of consciousness is what is received from distant information. The concept of distant does not determine what kind of information it is: past, future, or, for example, present. Thus, one can single out such a principle of its distribution in consciousness that consciousness is outside of time. And then control by numerical series that correspond to the names of social networks is as follows, provided that here it is also necessary to add that you single out the time when the Teaching of Grigory Grabovoy is generally widespread throughout the world. The following numerical series:

For the social network "Facebook" - 51931621981.

For the social network "Twitter" - 198681219.

For the social network VKontakte – 598317.

For the social network "Live Journal" - 198741218.

Method 37.

In this method, it is desirable to set up management in such a way as to take into account other similar management systems on the Internet for disseminating the Teachings of Grigory Grabovoy. That is, find those people on the Internet who are already disseminating positively, who have good experience in disseminating, and try to somehow organize them through your accounts that you have on the networks "Facebook", "Twitter", "VKontakte", in "Live Journal", or you want to organize them in these networks. Then the numerical control series are as follows:

For the social network "Facebook" - 197219314.

For the social network "Twitter" - 819491516.

For the social network VKontakte – 598314.

For the social network "Live Journal" - 514218.

Method 38.

This method should be used in such a way that it leads to the dissemination of information as if through the internal information systems of social networks, through certain systems where the highest speed of information transfer is. That is, to make management literally on the physical system of distribution, on the flow of electrons, on their speed of distribution with your information on the promotion of the works of Grigory Grabovoy, and simultaneously transmit it at the social level to the participants of the promotion. Then the numerical series of management are as follows:

For the social network "Facebook" - 539641891.

For the social network "Twitter" - 589748.

For the social network VKontakte – 894581.

For the social network LiveJournal – 8948971.

Method 39.

In this method, you can consider your infinite future as a reflection of the current reality. Then the management comes down to the fact that you make current actions such that they provide eternal life to everyone, and for this, the methods described in the works of Grigory Grabovoy are used. This is all explained, and then you get a lot of very supporters, followers of the dissemination of the Teaching of Grigory Grabovoy. In this way, you can recruit a very large number of people. Moreover, you can set up such a management system that, for example, the addition of a thousand people, as those persons who interact with your account, will be made in some not very long time, for example, per day or some short period.

Then, by setting such tasks, you can achieve a significant increase in the number of people contacting your account specifically for the purpose of disseminating the Teachings of Grigory Grabovoy. For this, the numerical series are as follows:

For the social network "Facebook" - 531841219.

For the social network "Twitter" - 8849581.

For the social network VKontakte – 89891888214.

For the social network LiveJournal – 61870184281.

Method 40.

In this method, distant events of the future can be perceived as a good present. Because if the future is good, then in the present there is positive information that says that yes, it is good. For example, you know that in the future there will be some specific event, some holiday, and now it is already perceived that it is pleasant to perceive. So, on this principle is based the management in social networks for the dissemination of the Teaching of Grigory Grabovoy, where it is reported that this is positive information, it must be perceived positively. All this is explained, specific methods are shown, specific results according to the Teaching, which are obtained from studying the works, from the general ideology of eternal life according to the Teaching of Grigory Grabovoy. Then the numerical series are as follows:

For the social network "Facebook" - 31874121981.

For the social network "Twitter" - 38951601981.

For the social network VKontakte – 31601921981.

For the social network LiveJournal – 58931971.

Method 41.

In this method, it is necessary, first of all, to consider the interaction of general cycles that occur in space and time, for example, with the change of seasons, when the time of day changes, and general cycles that exist: biological, informational, spatial - they are, as it were, included in the task of disseminating the Teaching. Technically, it looks like you are transferring technologies under control to those elements that are currently most developed. Man

is not sleeping, he is at the computer and perceives your information. Then the control is as follows:

For the social network "Facebook" - 68131971.

For the social network "Twitter" - 8915961.

For the social network VKontakte – 31851961871.

For the social network LiveJournal – 81978.

Method 42.

In this method, it is necessary to consider all events of the past, future, present as positive events of the whole world. The world, when it reacts to the fact that a positive event, general information of the world helps a person to align the whole direction of development towards positivism. Then the management is as follows:

For the social network "Facebook" - 514281319.

For the social network "Twitter" - 893541218.

For the social network VKontakte – 53161871.

For the social network "Live Journal" - 81931751.

Method 43.

In this method, you need to be able to evaluate the events of the past from the point of view of their necessarily good resolution for you. And then when you transmit such information to social networks that the Teaching of Grigory Grabovoy is a mechanism for improving all events for the better for social life, for a person's personal life, for his health, and so on, then this information is positively received by everyone, since people need it. Based on this, the next level of management can be implemented through social networks:

For the social network "Facebook" - 318718541.

For the social network "Twitter" - 83148541.

For the social network VKontakte – 85831649.

For the social network "Live Journal" - 317581.

Method 44.

This method can be used to ensure that some information systems concerning your personal systems of relations to your level of comprehension move to the level of decision-making and the most effective promotion of books, works, audio, video- Grigory Grabovoy. Here you can highlight separate levels of promotion, that is, in the form of books, for example, Internet publications of electronic or audio works, separately video works, and at the same time promote each area of promotion, respectively, differently. In this case, you can combine, for example: the texts of books can be promoted by composing a demonstrative video and, conversely, the video can be described by textual various advertising systems. Based on this, the numerical series of promotion are as follows:

For the social network "Facebook" - 89151971.

For the social network "Twitter" - 31658831.

For the social network VKontakte – 3168131.

For the social network LiveJournal – 3164884.

When promoting works, it is advisable to mentally pronounce the number series periodically in order to increase the speed of promotion.

Method 45.

In this method, it is possible to use the principle of systematicity in promotion, which is based on the fact that the initially embedded impulse of systematicity will be gradually or fairly quickly realized by systemic management.

To do this, as a promotion task, you need to set the task of implementing accounts in the main large social networks, through which you set the task of promoting the Teachings of Grigory Grabovoy and promoting specific works.

Since the Teaching of Grigory Grabovoy itself in social networks can be most actively promoted by indicating which specific works need to be mastered first, for this you can independently choose the works, and here the task of promotion is solved in such a way that you build yourself a plan: in which social network which account you open. Then you implement this plan and each time, for example, per day devoting some time to this, constantly move information in the direction of disseminating the Teaching of Grigory Grabovoy and in the direction of selling his works, for example through the sale of works through licensed sites and through advertising about licensed sites. Then the numerical series are as follows:

For the social network "Facebook" - 518316481.

For the social network "Twitter" - 89451971.

For the social network VKontakte – 5948139.

For the social network LiveJournal – 5396971.

Method 46.

This method is based on the fact that your perception is based on the needs of your own inner world, and at the same time you realize that others have the same needs, for example, eternal life. Try to put management on the unified needs of the spiritual plane, which realize the eternal life of the physical body, its eternal development is realized. At the same time, spiritual values, they also develop before you in the form of information, where you tell people that eternal life also gives eternal development.

The joy of eternal development is such that the spiritual values of the entire world are simultaneously learned. The teaching is precisely a certain engine of such universal development, where you can learn any spiritual values at all, feel them more deeply and see their connection with eternity. Then you perceive the integrity of the world more beautifully and

more harmoniously. Using such control, you can implement the following numerical series:

For the social network "Facebook" - 19481981.

For the social network "Twitter" - 839514.

For the social network VKontakte – 893148.

For the social network LiveJournal – 53971971.

Method 47.

In this method, you can use such an approach that you differentiate management by specific people and at the same time transmit specific information to specific people. Although there may be one work that you promote or several. Then here the following principle is also formed that when promoting all the works of Grigory Grabovoy, which form the educational program on the Teachings of Grigory Grabovoy, you can always suggest, at your discretion, what needs to

be understood in this or that work first of all, so that a person masters the educational program more systematically.

Because the task of mastering the entire educational program on all the materials of the Teaching, it is worth it in any case - this must be explained. Often, when a person goes through the initial familiarization with the Teaching on the basis of some materials, facts, then he can go through some initial course based on reading some separate book or brochure and then several books, and then the entire Teaching, then here it is necessary to explain that this complexity that exists, it just gives a general mechanism for knowing reality, which ensures eternal life for man and all humanity, and implements the laws of eternal development in general. It is necessary to show that the Teaching, it creates complexity, is aimed at the systemic implementation of all elements of eternal development, eternal life. At this level of management, the following numerical series can be used after the series 218491298718:

For the social network "Facebook" - 284908 For the social network "Twitter" - 3074891 For the social network "VKontakte" -519

For the social network "Live Journal" - 2180481889

Method 48.

In this method, you can apply control when you consider the age of a person, which a person perceives as a level when he simply thinks about eternal life without paying attention to age. When you can determine such thoughts in a person for the first time, for example, highlight a certain age - 12 years old and so on, here you can, based on the thoughts of this person, understand that he thinks correctly when he thinks about eternal life in a physical body. And here you can now put control through social networks, on the basis of such a platform, the following rows can be applied:

For the social network "Facebook" - 83149189.

For the social network "Twitter" - 51421871.

For the social network VKontakte – 53849871.

For the social network LiveJournal – 59871981.

When distributing Grigory Grabovoy's technologies, since they are generally creative, it is necessary to show that the dissemination occurs in accordance with some social, legal norms in all information network systems, and try to strictly adhere to the information that is set out on licensed sites, that this is precisely the dissemination of the Teaching, that this is education, that this is an educational program. But at the same time, the actions after education are carried out by the person himself, which contribute to eternal life. The management that you personally carry out is yours, but your task is to teach everyone else the Teaching of Grigory Grabovoy.

In this method, the task of teaching everyone the Teachings of Grigory Grabovoy, and all people without exception, is implemented in such a way that you try to understand all the internal, penetrating tasks of the soul of each person and create a common model of training that would correspond to the implementation of this task. At the level of information, it looks like you internally spiritually perceive information from the souls of all people, then build an educational sphere and highlight some independent works that, in your opinion, at this point in time should be most actively promoted to solve this problem. Then you first promote this work, and then all the other works of Grigory Grabovoy. In this case, you can use the following number series in social networks when promoting:

On the social network Facebook – 3185492197149.

On the social network "Twitter" - 81951331964.

On the social network VKontakte – 53964121981.

In the social network "Live Journal" - 53481219.

Method 50.

In this method, you can use a management system that allows you to quickly navigate in some situations on the network, when you need to react quickly. For example, you can get ahead of an event, based on the fact that the event is just beginning, you already have positive results, and you immediately enter it into management.

For this you can use the following rows:

On the social network Facebook – 31754921871.

On the social network "Twitter" - 53849121864.

On the social network VKontakte – 51482121751.

In the social network "Live Journal" - 3198154.

This method, it implements a system of general management in the direction of eternal development, therefore it is necessary to consider in networks as in abstract objects of information those areas where this task is implemented, and, having connected to these areas at the management level, already bring out management from them to the name of social networks. Then already use the following digital series:

For the social network "Facebook" - 531898941. For the social network "Twitter" - 89451821971. For the social network "VKontakte" - 5142851. For the social network "Live Journal" - 89457.

Method 52.

In this method, we can consider first of all the principle of self-development due to the fact that you work in social networks. When work occurs, you in any case have some experience of contact and communication, and this principle of self-development is such that you must highlight for yourself the positive areas of this information that benefit you, allow you to ensure eternal life for yourself and everyone. Thus, you can show other network participants that the methods of the Teaching of Grigory Grabovoy allow you to immediately orient any emerging areas of information in the direction of eternal development, and this is an undoubted priority of the Teaching, which is quite clearly manifested as the benefit of man. By showing this benefit, you can promote the Teaching on the results, on technologies, on everything that shows undoubted benefit for man. In this case, the numerical series are as follows:

For the social network "Facebook" - 53971421871.

For the social network "Twitter" - 31658121941. For the social network "VKontakte" - 54958121961. For the social network "Live Journal" - 895181.

Method 53.

In this method, the fifty-third, you can use a control system when you see the distant future as an already realized event, as if in the past. For social networks, the effect here is such that if something happens in the present time, for example, during the day in one country, in another - it may already be night, for them, according to the time interval, it may be either a past or a future event. There is a mixing of different time aspects, times of day. You need to be able to conduct training information in the layers of information between these mixtures, so that it is universal and accessible everywhere, regardless of the time of day, regardless of any transformations or situations occurring in the information networks. Then the control situation is such that you can use the following numerical series:

For the social network "Facebook" - 31658121981.

For the social network "Twitter" - 64839121871. For the social network "VKontakte" - 51428161. For the social network "Live Journal" - 5987941.

Method 54.

In this method, it is possible to use the principle of reaction of the distant future, and the one that is absolutely positive for everyone, to the information of the past in such a way that the beam coming from the future modifies the past for the better; and already from the past comes good information to the future time; and the current time, thus, is formed on the basis of the beams coming from the future, positive. That is, everything is fine with you, you have mastered the technologies of eternal life and all the people around you. Then the same information comes from the past, but it is formed by the beam from the future, as has already been said. Such a complex control system, it is realized through the following numerical series:

On the social network "Facebook" - 831549581.

On the social network "Twitter" - 64121971.

On the social network VKontakte – 51384561.

In the social network "Live Journal" - 31971984.

Here we can also use the name itself – "Live Journal" – as a recording of living systems.

Method 55.

In this method, we can consider everything that happens on the Internet as a system that has certain laws of development, its own, and compare it with the development of a person, with the inner world, with the physical world, that is, with the physical body of a person. Consider which organ and how often emits certain information, which also interacts directly with some information of the external world and also, naturally, with the information of social networks. Bringing information to some abstract control systems, that is, to those areas that mean this or that element, for example: information of some organ of a person, the physical body of a person is one volume of information; and information of social networks is another volume. These two volumes; if you mentally imagine them, as if they are moving one next to the other, then information from a person, the area of a person, it must be controlling. It must be arranged in space so that the information of the network is a controlled area, and then the following information rows for control:

On the social network "Facebook" - 513841219.

On the social network "Twitter" - 84851961.

On the social network VKontakte – 51381971.

In the social network "Live Journal" - 31961981.

Method 56.

This method requires the use of a control system.

future events so that the future, possessing absolute stability of management, when you mentally build specific events there by means of management, it is, in essence, a certain level, which is subject to implementation simultaneously. On the one hand, you built and believe that this is at the level of faith, that this will happen, and you try to do management, on the other hand, it must be implemented. The tactics of implementing such a future must be shown in social networks through, for example, management by numerical series.

Then the rows are as follows:

For the social network "Facebook" - 3185148971.

For the social network "Twitter" - 3148041.

For the social network VKontakte – 89351421.

For the social network LiveJournal – 51831.

Method 57.

In this method, you need to imagine the future of a person so that it is not just eternal, but to see that this future is connected with the real eternity of a person. Then all people get here, including you. When you develop yourself to the level of action with this idea, then your thought becomes active. Try to work on the network with active thoughts that quickly carry out the promotion of the works of Grigory Grabovoy. With such an information basis, the numerical series are as follows:

For the social network "Facebook" - 3148531. For the social network "Twitter" - 61421981. For the social network "VKontakte" - 81951987.

For the social network LiveJournal – 217518314218.

Method 58.

In this method, all uncertainties that exist in the information must be immediately brought to the management level to ensure eternal life for all people. Then

The controls are as follows:

For the social network "Facebook" - 893541.

For the social network "Twitter" - 61451871.

For the social network VKontakte – 58421831964015.

For the social network LiveJournal – 894317.

Method 59.

In this method, all events of the past, future and present can be accumulated as a level from which you can get only the events you need. Then social networks can be considered as networks from which you can get the necessary event for the distribution of the general Teachings of Grigory Grabovoy. Then the control rows are as follows:

For the social network "Facebook" - 318718519.

For the social network "Twitter" - 61421851.

For the social network VKontakte – 31681954.

For the social network LiveJournal – 51871.

Method 60.

In this method, it is necessary to consider such a position in management that the entire management system, which exists at the level of including new various methods, known methods for ensuring eternal life, is a derivative of human consciousness, from the action of the soul, the spirit of man. When the principle of this action itself, when the personality of a person acts and some derivative systems appear as intellectual work, which is aimed at ensuring eternal life is

manifested, then, knowing the principle itself, it is possible to work in social networks based on the principles of management, which are also distributed in social networks, on specified principles. Then the numerical series will be as follows:

For the social network "Facebook" - 539641218.

For the social network "Twitter" - 194016581.

For the social network VKontakte – 31401981.

For the social network LiveJournal – 51921971.

Thus, the data from the first to the sixtieth methods of management in social networks implement the task of eternal life of each person and all living things in general. Based on this task, which is implemented through the Teaching of Grigory Grabovoy, through specific works, it is possible, accordingly, to immediately organize accounts, some pages on the Internet for this purpose. In addition to those social networks that were specifically reported here and for which specific management was given, accordingly, it is possible, by analogy, to build accounts in any social networks where you consider it necessary.

You can create your own website and promote this website, where information will be presented systematically, for example, on several of your accounts at once. Then, to promote your website, which is now easy to create through automated website creation systems, you can use the following numerical control for your website to promote the works of Grigory Grabovoy.

The numerical control is as follows - 8198884898481. Then, along with the fact that social networks are used, you can use your autonomous level, but at the same time. This level should be used immediately after creating accounts in social networks or simultaneously with the creation of accounts in social networks.

In this way, you can develop a deep approach to the Internet space and see where you can promote in general. Participation in various forums can also be very effective. Or you can conduct a certain correspondence with certain areas, coordinate actions, your correspondence, where you come into contact with specific target audiences and try to teach them, promote through them,

respectively, at the same time teaching them the technologies of the Teachings of Grigory Grabovoy.

When working with this work on promoting the Teachings of Grigory Grabovoy, it is desirable that you adhere to certain principles of the implementation plan in terms of specific actions in the Internet space. That is, it is necessary to organize accounts, pages in the social networks "Facebook", "Twitter", in the social network

"VKontakte", in "Live Journal". And after you open these pages, start using licensed sites, where there are materials licensed for the promotion of the Teachings of Grigory Grabovoy, for the promotion of the works of Grigory Grabovoy. You can send information to the e-mails of these sites through their e-mail, so that you can be helped by the site administration and transferred to you, to some methods, quotes for promotion.

On your websites you can use some quotes from the works of Grigori Grabovoy, on your accounts you can also of course use them. You can simultaneously run certain positively directed forums, where it is clear that a person can achieve a positive good result due to the Teachings of Grigory Grabovoy.

The names of these accounts that you open on social networks may be such that: option one - you use your pseudonym, which you believe on a spiritual level that it most strongly promotes the Teaching of Grigory Grabovoy, namely, most strongly implements the task of eternal life for you and everyone around you.

Also, the second option - with the same goal of eternal life for everyone, you can use the number series that is given in the method, or the first, as was said, five numbers of the number series.

The third option for naming accounts could be the name you choose and a number sequence.

The fourth option for naming accounts is the method number and then the date of creation of the account in which, for example, this particular method is used. That is, it is a sequence of numbers containing the method and date, you can also enter the time there. At the same time, if desired, you can also add a name that best suits, as you think, your tasks of promoting works.

You can also simply use your name, which you have in your passport for promotion. It all depends on what approach you consider

appropriate. When using your name for promotion according to your passport, accordingly, you must take into account that information systems work that concern your name in network systems at the level of general connections, information exchange. When working with pseudonyms, which you use as a chosen pseudonym for the fastest promotion, here your information viewing works more, your movement to view future events in the direction of the most optimal level of management. Therefore, promotion through a pseudonym can be faster and more appropriate.

In general, when promoting the works of Grigory Grabovoy, the main goal is to implement eternal life for everyone, to select the most effective mechanism that implements this task. To consider, of course, the processes of compliance with legal systems, that is, copyright protection, so that there are licensed exact works through which it is possible to teach everyone eternal life most quickly. And, accordingly, to try to help everyone who is engaged in the promotion of the Teachings of Grigory Grabovoy, to exchange experiences and through the Internet space it is possible to conduct some joint forums. To try to prepare

those who promote the Teaching from new participants, from friends in social network accounts, of which it is better that you have many thousands. With a certain amount of experience, it is necessary to reach the level of coordinators who can already work, for example, at the level of training new participants in the system of promoting the Teaching of Grigory Grabovoy.
