

GRIGORY GRABOVOY
10 Technologies - Health Formula

Concentration for predictive management

Lecture 10

In this lecture I will talk about that
as per my Salvation system
transfer
concentration system
in multi-pulse

for example, having considered
case of surgical diseases
you can make a concentration
on the index finger of the right hand

but also surgical diseases are possible
heal
if you concentrate at the same time
in three positions

surgical diseases
eye diseases
ear-nose-throat diseases

then it turns out that here
addition
index finger of the left hand
little finger of the left hand
and also the thumb of the left hand

and we get
generalized concentration
across the entire spectrum of diseases
and at the same time we intersect with that
what i said about concentration
on the index finger of the right hand

i.e. the intersection of a multi-pulse system
gives specially
concentration of control
the whole spectrum of the event

How is concentration carried out?

concentration is carried out in this way

what is the task

for example, healing a sick person

health restoration

event optimization

improving events in the right direction

and the thought is carried to that point

which I am talking about

it could be a region of space

this is how concentration is carried out

you can even just write out the task

and put it in the place where it is located

focus on it

this will also be a concentration

in fact, they are carried out arbitrarily

depending on psychology

and Human Perceptions

for example if we consider

unknown diseases

i.e. you know what is happening it would seem

and then the concentration is carried out

simultaneously

on all fingers and toes

this way you get

10 - Pulse System for Healing

for recovery

if you are already managing events

then this 10 is a pulse system

can be converted to single-pulse

by simply formulating the task

transferring this task to the object

where healing should take place

.

so I moved on to the next part

which is a generalized completely

one can only think
and thus develop
your Spiritual structure

on control through concentration

those. actually concentration
this is the development of the Spiritual structure
by control type
according to the Salvation system in such an area
as predictive management

my section Teachings
Predictive management
primarily focused
for creation
real living conditions for any person

and this section of the Teaching was disseminated
for all people regardless of age

.
the purpose of this section of the Teaching
consists in the fact that
to teach a person
in any situation
receive
forecast of the development of some event
and manage accordingly

the forecast is divided first
to receive information
and then control accordingly
or logical
or informational
or obtaining those Spiritual characteristics
which would allow
at the level of the Soul
manage any events
while being, *for example,* in a state of rest
being in any place
or being
in any production activity

in this regard, predictive management
has such a status

it is universal

and specifically
in relation to each specialization
I study almost all specialties
which act in a complementary manner to them
that I give a forecast
I give a system of structuring Consciousness

I'm showing
how can you learn to manage for example
and know
what will happen in different areas of activity

I started doing this in aviation
then in the field of pilot training
which are already there
very long time on flights
i.e. those who already have extensive practice
quite a lot of experience

and this knowledge
which I got in practice
I spread
in absolutely all directions of development
that exist in the world now

How are your forecasts being realized?

·
when it comes to fast-moving events
my predictions are coming true
in fast-moving events in this way
that developed in the practice of forecasting
system

firstly, it works regardless of that
what factors do you take into account or not take into account

i.e. your Spiritual level becomes like this
what do you control while in a state
or peace
or sometimes in a state of sleep
but nevertheless the management is ongoing

if events are fast-moving
or they are, for example, problematic, let's assume for security reasons
then control is carried out according to an unconditional attribute

i.e. you already distribute it in advance
information
in its development
that you get control over almost all situations
even if you don't have full information in advance
about this situation

and when the event starts to develop
fast enough
you can manage without taking into account all events in a row

Training in various fields of science

.
in my view science is culture
which allows you to decide
real tasks of Salvation and harmonious development

in this regard, I distinguish methods in science
which allow
based on my own spiritual practice
to every scientist or every researcher
to do science in that manifestation
in which science begins to work
as a control environment

that's why i teach scientific methods
based on that
as based on
of one's own Soul
of reason
own Consciousness
be able to build the development of a model
for example, physical mathematical models

and learning happens this way
that having considered any process
for example in medicine or in physics or in mathematics

I teach a person to tune in spiritually
or directly with the Soul
what needs to be done in this direction
to get exactly the result of Salvation

i.e. either it will be a well-known science
or it will be a completely new created science
but nevertheless a person learns

First of all, to the Spiritual Administration

i.e. as from the principle of one's Soul
which has a message
with all the elements of the World

original level from the Creator
how should he build
all subsequent science
all following studies

and then such science is not contradictory
it is based on one's own Soul

and therefore it does not lead to destruction
but only to creation

These methods allow
it's quite practical to talk about it
how should this be done

if there is an element of Consciousness
which, for example, is a scientific work
then the next element of Consciousness
this is what is the task of, for example, Salvation

and the third element of Consciousness
these are the connections that need to be made

thus showing
how connections happen
between the elements of Consciousness

scientists receive
a very specific way to do that
so that no longer by means of some statistical data
get results

but already in a creative way
by direct control
and by means of absolutely reliable
and an accurate result

in this regard, my studies in science
applies to any research
which exist in science

since the practice of Salvation
that is exactly what should be spread
for the whole region
each area can give birth to a new area
which also leads to Salvation

What is the difference between my science
and a well-known direction in science in your presentation?

My science is primarily aimed at
for Salvation and harmonious development
through one's own Spiritual state

where the Soul is the canon
which allows you to define connections

not only existing ones
but also to immediately build future connections

i.e. the difference lies precisely in this

and well-known directions in science
I naturally use it if necessary

but each of these directions
gives exactly this structure of connections

when we have
just such precise knowledge of the future
in order to get an accurate result

.
