

GRIGORY GRABOVOY
10 Technologies – Health Formula

Reflected signal healing

Lecture 3

Implementing your
technology of salvation from global catastrophe
I almost discovered
what is recoverable
almost any fabric
and any matter can be restored

Thus
having completed a number of practical works on healing
from seemingly incurable diseases
or by materialization of various objects

I found a connection
and this connection was visible from the very beginning
meanwhile

as Consciousness
interacts
with the outside world

as I already said
interaction is ongoing
based on your own body

there is a principle
this is interaction
with distant objects

for example, if there is interaction with a plant
i.e. concentration on the plant
or on a stone
on any object in the environment

then you can
through the principle of reflection
find control
in the structure including health

so I will tell you now
about a specific case of healing

based on this practice

and this case was like this
which affected a fairly important organ
heart

we are talking about myocardial infarction
and about healing

through the principles of dissemination of Consciousness
by reflection from objects in the environment

i.e. actually being in the forest
or being in any place
you can focus your attention
on some object

for example on a plant leaf
and due to mental reflection
it is possible to achieve recovery from a heart attack

why exactly was the heart attack cured
through the reflection technique

because
heart as a systemic organ
the only organ
he needs to be cured
through the reflective principle

i.e. two practical impulses
at the expense of a real organ
and due to the reflection of Consciousness

so now i told
about the principle that exists
for the treatment of unpaired organs

organs that are alone
this is the heart liver
this is every cell of the body, etc.

in connection with that
that reflection is a fairly convenient principle

in order to heal
large areas of the body
This is the principle of rapid recovery

so this principle of reflection

can be used
for the treatment of acute and rapidly progressing diseases

actually methodically
you need to do it this way

concentrate on something
and by high concentration
on something
to lay down a thought
about healing a specific organ
i.e. in this case
the concentration is

it is precisely in concentration
on an environmental object
