

GRIGORY GRABOVOY
Lectures for primary level lecturers
**Technologies for the implementation of your own events
through the Macrorescue system**

In this part of the meeting ^{Means} in the second part
I'm just practically showing the technology
related to ^{exactly} implementation of own events
through the Macrosalvation system

and I show why these technologies
They ^{let's say} So maximally effective
including for private events

^{Well} firstly, because when it comes to
about Macroregulation about Macrosalvation
then you do it in this technique
minimum required action
which ensures the precision of execution
any level of management

and this minimality in action consists in the fact that
that you are ensuring the next level of your development
i.e. the development of the World in general

so when you do
namely the level of Macroregulation
then you do just the exact same action

and in accordance with this
management which will already be private
simultaneously with this precise action
is ^{Well} the most correct the most effective

and quickly achievable

hence
when we talk about that
that this is precisely the level of Macromanagement
this is the level
entering into control into control element

then first of all we are talking about that
what exactly is this level
he also provides

as a possibility of management itself in the future
and so satisfies the Laws
all harmonious external and internal connections
and naturally it corresponds exactly to this
by all parameters
so that your private management i.e. private task
was achievable as quickly as possible

considering that you are through the structure of Macromanagement
through the system of such universal creation
universal salvation
Eternal harmonious development
you are really organizing exactly that society
i.e. that social environment
which will forever evolve

then here we need to understand that all technologies
which you implement
with any structures that are built around you
or it will be a treatment
or it is the management of some specific events
all these technologies
they are really absolutely creative
i.e. they fit in with all the harmonious
again systems in society

This is a fundamental religious system

and there is the same For example just a device there

For example even state systems

aimed at protecting citizens and developing society
you connect with these systems too

because in this case you are just adding
element of actual direct participation
in the real Salvation of all
when you develop your Consciousness in this way
that from Consciousness you influence any event

Means considering that such influence is only possible for a creative
purpose

because it is done according to the Laws of the Creator, namely
creation

then you can't For example do

some kind of destruction due to these technologies
but you can actually have
absolutely real protection by simple management

where is the control it is Well like life itself
this is the organization of Reality at the same time
hence

you are in a completely real environment
which you manage and which you organize
for myself
for everyone

precisely in the direction of development
Eternal standard of living of civilization and society

so when you For example any control

you do it even without For example

Well as if primary level of memories as if common tasks

then the next level of management
it will still be the same

hence
you can do management
there For example having set the task there once
or choosing an ideological goal
this is exactly the principle of management
and then the management will still be the same

another question is that when you For example in some cases
do you want Means have more or what? General Perception
Well any specific task
then you need to highlight in this task
what acts from the level For example
Well let's assume there possible shift of events

or this there some level of macrodestruction
or this For example just a system
exactly Well variant of a unique
as if local event offset

and depending on this
Can as if again or what? recall
at the moment of control
that you are doing the Macrosalvation mission
and then you get
more as if informed more sustainable
and more Well as if reproductive information flow
which provides
exactly as if correctness in the next action

i.e. here it is necessary to differentiate periodically
What Means You Means you do it depending on that
what information do you receive
as a result of management
And Means considering that your management is creative
i.e. the action is aimed at that
that even the resolution of some conflict at the level

this is creation as if information cultivation
for all parties in a positive understanding

then how do you create information
it is quite possible to organize
An infinite number of realities
Where Means you implement
any system, even a conflict one
to the level of the harmonic system

because here the control allows even more
and create information
not only there regulate

and the main aspect is still precisely
action in regulation
as well as the action in creating information
We'll act as the Creator acts

hence
elements of creation they are actually unlimited
you can create any combination of creative events
which can be implemented in any case
if you set a goal
and for this, ensure technological advancement
or it is a temporary composition, i.e. you have time
either it is due to the element of fast or there emergency management

Means therefore it turns out
that management at the level of Macro-creation
always achievable for the purposes of the task

another question is that it depends on the time
and from tasks For example Souls of the Spirit from the tasks of society
you being at all We'll systemic or what? let's say so manager

because you take into account all the nuances of the development of the World's information

you can often decide
at the level ^{Means} conceptual states of the Soul
parallel tasks of society
tasks of some remote system

therefore, setting management goals
look
If ^{For example} this is the goal ^{Well} is being implemented
enough ^{Well} timely ^{let's say so}
then it is clear that this is how you laid it down

if you see that at the moment of organizing the goals
is happening ^{Well} a number of other events
and often have to ^{For example} do in parallel
some other control systems

then you can basically regulate
time to achieve the goal
to the level of control of simple event structures

then event-driven design control
says that this event still happens
and you determine time like this
what is it ^{Means Well} can be either increased or decreased
i.e. that this is precisely the structure of time
this is basically the system
which is included in the event information

and in this way you can get correctness

under temporary management

considering that Well let's say Here with such an introduction
system of specific control elements
already contains the Macro level
then in order to get the Salvation tasks
it is precisely the opportunity Means take control immediately
then first of all you need to tune in to that
that such a possibility exists
and it is quite necessary
for systems
or Well fast there instant transfer of knowledge
or for systems when Means knowledge transfer is necessary
without Well as if large volume of information

That's why Means when you listen to this exact part
and your task is also to convey this information without fail

and those who will perceive this information
they have a task
pass the information on without changes

actually according to the basic level of this ideological status
mandatory access
Macro- universal and real Salvation
Eternal life

and here the situation is such that the concept of "Eternal life"
often technologically at that Well as if or what? is being processed
in Human Perception
that the current life is considered as an element of Eternity

i.e. therefore
not give the opportunity
Well especially there somehow there problems

restorative processes for the body

and secondly, to ensure for the purposes of ^{there} Macro creations
real ^{Means} that state
when a person is definitely on a spiritual basis
knows
that it can ensure Eternal development

because in the conditions of understanding this process
the main element is
it is the development of the Spirit of the state of the Soul

because ^{Well as if} long-term human development
its long in time ^{let's say} development
the next element still does for a person
new element

i.e. the next second is still the next one

and in connection with this criterion of stability
and really the security of a person
namely the technologies of Eternal development
is his state of Spirit the state of Soul
which can thus transform Reality
What ^{Well} firstly there is no macro destruction

secondly, it can be solved correctly
their creative tasks
and ensure Eternal development according to the Laws of the Creator

hence ^{Here} the concept of "Eternal Development"
it's in ^{Well enough or what?} a serious component in large volume
this is a state of the Spirit
capable of ensuring such development
state of mind and condition ^{generally speaking} Consciousness

which can technologically create Reality
can be technologically regulated
almost any situation ^{Yes} around
as if external or internal
and including self-organization ^{For example} body

that's why these tasks exist and they are
besides the fact that they are ^{For example} Well targeted
they must still appear in the current time
real
i.e. to provide it now and here

i.e. you should already be in the current time
receiving ^{there} first level of knowledge
provide immediately
as if the entire component system of the Teaching

i.e. firstly, having received the first level of knowledge
either in words or ^{there} by transmitting thoughts
at a distance implicitly from another person who knows it

a person should immediately
first of all, to ensure that
what is he ^{Well} can really prevent
here are the macrodestruction systems to a minimum

and then further technologically
he must provide ^{there} realization of own goals
and ensuring Eternal harmonious development

therefore the conditions ^{Means} Well training
the conditions for accepting information are as follows
that as soon as the first level of information is received
even if only in the general setting, even in the ideological setting
knowledge on Macrosalvation is already being transmitted
and knowledge of how to perform specific tasks

hence
when you say it you must pass this on immediately

and at the same time Means technology of transmission
can be completely different
someone can perceive technologies specifically
in the form of For example flowers
and see what is happening in its control system
there in Perception in the event system

Some people may be more analytical
and consider that he will apply it somewhere later

although in reality he already applies it quite well
but believes that this action needs to be analyzed

i.e. it can be completely different
level of Thinking
which as if should be taken into account by you
absolutely must as if be fully taken into account
if possible, the level of not just Thinking and action plans
but necessarily the level of specific events of specific people

because as soon as you save
at least one there thirty years ahead
therefore, the Earth has not been destroyed for thirty years

i.e. any action is a control action
and if possible as soon as you implement control
For example at the level of their tasks
Necessarily Means look
on the state of Reality of management
because as i said this is a spiritual characteristic
which you differentiate yourself

at a certain or what? level of understanding
here you can see that any action is control
and any action is the Reality of management

you just need to be in this state
be at that moment
when you Well need it

i.e. here is the concept of the "state" of the "spiritual state"
it's not always For example as a matter of fact
Well some kind of rigid system

i.e. the state can be completely different
by sensory level
by Perception
By For example reaction level

but since generally speaking it's really going well
here is reform
such macro- in general destructive systems in essence
Means who still need to be given the opportunity
their own development, by the way, etc.

if we reform military production
then we have to provide them
the system of their further
like, well there may be conversion development

i.e. in principle the task lies with you
organization of the entire system of communications
the entire system of creative connections
for the entire control area

because in the technologies of Eternal life
you can only solve problems
by providing a level of freedom of choice
specific event participant

i.e. he must the person must choose
specifically the most favorable system
from the Creator the principle is exactly this
that everyone chooses for themselves by free will
Well the best that is best for him
i.e. you will have to create what he chooses himself

and therefore a system of creation is obtained
it is actually much deeper and higher
i.e. you take on the task
real management according to the Creator's tasks
and this task is Well everything is absolutely in order
which exists as a result of management

Well For example I have there there was a concrete fact
Means I gave diagnostics on the plane
Well Means for a certain there process
and it turned out that because I gave this diagnosis
Means airplane Here I just didn't fall

and even before that there was a fact Just as if Here the plane was flying
I gave it too, he didn't fall Means Well there could have been a disaster
it was in the company of the airline of Uzbekistan

and it turns out like this
that when the experts actually made a conclusion
what if it weren't for diagnostics For example then the plane would have
definitely crashed
Well one truth on the rise where could remain
in principle there mostly living people remained Means
but he would have fallen from a great height anyway
and the second one just flew

then here it is then in the first case in which
Well could stay
and you can see who stays if the plane doesn't crash

then the management there consists of that
what who For example sat Well there pilots
which are just Here got into the most problematic there into the fence
Means They
Well there their event construction was interrupted

hence
on the manager Yes which makes such management
even through information
the task is to ensure as if connections of future events
and the task is on it
on this person

i.e. if diagnostics are done and the plane does not crash
then the task is as follows
that events have to be built on
to the point that a person wanted to do something there
Well work there let's assume scientific

and the task is
provide event-driven construction
according to this scientific work

i.e. as soon as you make the control
which Well prolongs development
then you on yourself
but which could be destructively destroyed
you take control
related to the organization of the entire event status

it's under management it's an organization ^{there}
Well let's assume ^{there} the man was handing in some scientific work
organization
where does he hand it in
organization ^{there} states ^{Yes} health of the teaching staff, etc.

i.e. the entire control structure
necessary in certain situations ^{when here}
This mostly happens when it is fixed
at the level of collective Consciousness
it is recorded that there could have been a problematic side to the
events

let's assume the commission says
what if there was no such diagnostics
then the plane ^{For example} would have fallen

if the commission does not make such a conclusion
that course of events ^{as if} unfolds like this
What ^{Well} there is a diagnostic that helps save the plane
but no commission conclusion is made ^{For example} If
then everything goes on ^{as if} more natural
and there is no need to detail how to organize an event

i.e. here you need to choose the design
real management
this is a real system of understanding Reality
what do you control really
and therefore you provide those designs really
which were could have been

and this must be clearly understood
that as soon as you start managing
at the level of Macrosystems
So you control accurately
therefore, it is your responsibility to ensure
those systems in the same Reality

which could have happened but might not have happened

if you did it so that they still started to happen
then you are actually introducing your own management system
and we owe it to her as if ensure sustainability

due to this Means I'll give it to you now
Well these were just some of the examples
where events are reformed or they are appointed
in case of possible there let's assume disasters

but when you talk about Macrosalvation
and make a system according to Macrosalvation
therefore you must highlight some facts
where you do it and there you do it
real Macro- or there Micro-transformations

i.e. you need to understand
that in certain systems if you shifted
or made it so that the macro-catastrophe does not happen
you must as if prolong the development of the future
in accordance with the fact that your task here is
to make the next development system

and this is exactly the principle Well strong-willed
or what? managed information organization
he is exactly this principle
gives the possibility of infinite development
when you can organize any structural system
and this system in the future
as a kind of constructor to collect on information
at the expense of there technologies Thinking Consciousness Spirit Soul
and at the same time you have the implementation of this particular
design

while all people are doing all this

Well not all people can do it
then you should naturally understand
what is your level of organization
must have an educational aspect

i.e. here is the accuracy in the transmission of information
consists in the fact that
that the structure you build should be like this
that it takes into account the need to transfer knowledge

i.e. this Well no such thing can be very strong
or what? according to optical characteristics light level
which as if strongly reflects

and this is the level that even if he is strong
then he leaves the projection that is very accessible
and it basically contains
Precisely accuracy
in terms of technological information transfer

the main thing is to track the accuracy of what you should
the accuracy is still visible in what
what do you see what Means students Well Who listeners
to whom you pass on knowledge
you see that they are in their place
also accurately solve the problem of Macrosalvation

here is their event structure
that the knowledge they receive is such
what are you really sure about
that in this place their projection level is event-based
does not allow a global catastrophe
this is also one of the levels of accuracy
in the transmission of information Well etc.

there you can differentiate some personal levels

which may be as if an element of precision
in the transmission of information

and that's why I am here now How short
I will consider

Means according to one literally specific management method
which will be in the next lectures

i.e. this is management there by numbers
control through almost letters
then color management
and control of sound and shapes

and when will i consider
First of all, we are talking about
that this is only that level let's say management
which is given immediately
but it can still be just as effective
as far as Well there some other deep let's say so level

i.e. therefore one thing is this primary level
but from the point of view of the tasks of Macrosalvation
and with this level you need to be able to do Macro regulation

Means and secondly, here we can say
that these levels in the future
for special courses they will be detailed
and it will be possible for each of the levels
listen as if special course

Here so when you Well come there
and you are faced with a task
Means Firstly Well transfer knowledge correctly
then naturally the first action
we must try to do it for the listeners
Well such management

so that their tasks can already begin to be implemented
or ^{there} maybe they have already been implemented
as soon as you saw them

when you do this action in management
The next task is for the listener
seeing the action
First of all, I understood you at that level
or understood at the level of words
and was able to convey this correctly to others
and in such a way that it was
infinitely precise dissemination of information

so from the point of view
^{Means or what?} dissemination of information
here a level arises ^{Well} which in shape
it appears in the form of a number
is a level ^{Means} let's say eights

there is a concept of "level eight"
and there is just the number "8"

i.e. the upper part
this is an organization ^{as if} infinite level of control
and the lower part of the figure eight
This ^{Means} level of private tasks

and when you ^{For example} do management
through numbers
then get any next number
or ^{there} some number that is around eight
quite simple
because you can get this number
^{Well} First of all, here is a specific method
I'm already moving on to the first lecture

where the controls will be given by numbers

For example there is a specific task
Here gain knowledge be able to know Means process
and then pass it on to the Eternal Distribution
this is the top part of the number 8

i.e. you just have it in front of you in your thoughts
there is a number 8
or in your Perception

Means and in order to make management private
do you have For example private events
this is the lower part of the number 8
but the simplest level of control
is that you
and the most Well it may be effective
that you are at the bottom of the number 8
you just see the number 8 in your Perception

in the lower as if here in this circle are the numbers 8
which in the usual way
stands vertically in Perception
are you considering as if imagine those events
which you want to receive
and within the framework of these events
Means highlight the main points of events

i.e. it could be an event again
Yes Macro regulation Macro salvation
Eternal harmonious development
some kind of glowing sphere inside there

You as if look from afar in your Perception

second it is a series of events

Well which leads to your event

let's assume the number of meetings can be directly increased there

how many of these meetings are there For example Yes

and ultimately the completion of the event

i.e. you highlight as if just logically

and the selection can proceed in its own way

but the amount of discharge is limited

i.e. if it is better to work within the limits

from For example 0 there up to 9

in these numbers, i.e.

when if you have a lot of meetings

then we can say that "all meetings" For example this is the second event

and then you get

let's assume need to Means do so

so that through many meetings you

or maybe some phone calls, not necessarily meetings

or even some elements of Thinking

you can develop the logic of thinking

Means you had some specific event happen

you are inside this as if lower ring 8

lower circle

you only allocate for everything

number 1 is the sphere of Macromanagement

For example number of meetings or number of calls

which need to be done from your point of view

this is a specific amount Means

in principle if the quantity is greater

how there from 0 to 9 is also possible

you can put any number let's assume 14

and the occurrence of the event you determine
when it should happen
Well from your point of view
what is this action in the sequence
there fifteenth act or there twentieth

or is it the time of the event
here it can be different i.e. day Yes

work if possible
we need to be more careful with the day of the event
It's better not to work with the day of the transaction
and with the number of events
which must necessarily be realized
in a specific Well time Yes
time is embedded in that
that at this time it is happening

then it turns out that you are inside
Well in the most arbitrary way
You can dial any combination of events
and theirs as if these events are shown as small spheres
and give each sphere a number

and that's when you give each sphere a small number
let Well For example there will be three
one big one Macro regulation
And there two smaller ones

your task is only for a short time
there For example there some seconds
hold in Perception
or as if watch this eight from the side

which contains

Well it is precisely that part that contains these numbers at the bottom
just observe and as if remember them periodically

those. For example Well I need to implement there specific event

I need let's say Means do so

to through For example there EMERCOM of the Russian Federation

certain information passed

which can really save there

Well including from local disasters

then I just do it for everything

I'll take this eight

Means I fixate at a certain level of Perception

near the physical body

I select the bottom circle For example

and I put the Macroregulation sphere on the left next to

Well in relation to as if near yourself

to the left of your left hand

as if shift to the left

and then I build what I need

to For example my actions

reached certain levels For example in the Ministry of Emergency Situations
system

i.e. the second act This is the Ministry of Emergency Situations

this is the second action in principle the second sphere

I assign her number 2

and generally speaking the third act

that specific technologies reach the Ministry of Emergency Situations
they use them
it's generally just the number 3

but in principle I can do it like this
to Means Well just add two actions 4 and 5
take add and that's it
just in case, to take into account the positions
which are developing
from the optical form of information
because in this case we are talking about optical form
i.e. you perceive the object optically
not by sounds
namely, imagine

i.e. it is possible to perceive with sounds too
there 8 sounds there Yes For example
but in this case you imagine you see in Perception

and that's when you see it in Perception
you only record a few seconds
it just turns out that I
one sphere is 1
then 2 - the second sphere
third
and just in case I also fix it on top
two numbers - 4 and 5
which denote as if spectrum of events

you can put it into this diagram
Well generally speaking any events
reducing them to three values

beginning of action
middle of the action
and the end result

and just in case add ^{there} action development
which is also controlled by you

this method adds
what is the main spectrum of management
how do you get into the control system

here the element is exactly in that
what you add number 4 and 5 is what develops
but you don't necessarily do that
you don't necessarily develop it
and you only fix the three rigid systems

thus perceiving ^{Means} such a system
and it is quite easy to perceive in terms of understanding
you can move this eight
still in Perception near the physical body
and find the point of greatest activation
For example ^{there} in the heart area
at a distance ^{there} For example ^{there} Well 20 centimeters
and that's all

and once you've held this eight
and went through these numbers again further on
further, the number is enough
i.e. the sphere of events itself is precisely like an optical point
further it is not obligatory

i.e. the eight that is inside
contains at different points
just 1 2 3 basic elements
and 4-5 which in principle can be mobile

and so the management of the situation consists of this

that the first three and the eight stand they stand in one place
and you can move 4 and 5

and so by the way that you just move ^{there}
4 inside this circle
you do the management
in this case you can see what optical element
maximum ^{as if or what?} developed
and comes from the level ^{there} For example Macrospheres to 4

i.e. there due to the fact that you start practicing
you see how the process of connection with the Macro level develops
how the investigation is developing, etc.
you can even control development
in this case, investigative systems

simple ^{Well} example if i want to use this system
^{there} for treatment ^{there} For example from diabetes
then basically from diabetes ^{Means} as such ^{let's say so} Yes
then you can even see it yourself ^{Here}
I say "from diabetes"
they took it and immediately organized 8
and made the number of numbers inside this ring at the bottom
they just took it and did it right now
and I for now ^{Well} I'll watch

i.e. at the moment when you teach technology
try to do certain things like this
so that work can begin immediately
it's not necessarily just diabetes
^{let's assume} specifically in diabetes

Macrosphere it remains the same, i.e. the number 1
if we take 8
That ^{Well} in relation to you, i.e. to your left shoulder
costs ^{as if} at the bottom 8 inside the circle
costs

Well circles Yes inside the circle there is the number 1

it stands as it was before
Macroregulation sphere
it is a certain level that does not change

2 is the task of treatment Yes diabetes
3 that this person is cured
and 4 and 5 are the access system
or 4 you should you can so by the way so hit
in human events
those. 4 this is his event environment
5 this is the cellular composition
and work only through 4 and 5

i.e. watch focused attention on 4
you have a cellular composition opening up

and it's immediately clear what needs to be adjusted
For example in the cellular composition to regulate
just in some specific cell
quantity let's assume liquid phase
you don't have to For example consider cellular morphology
It's clear that there is more liquid there than necessary
it's simple as if you already perceive it as information
This is an information access system

and then when you need to adjust
you are back to 8 again at that level
again we get sphere 1 it remains number 1

in 2 enter the regulation task
i.e. normalization of the liquid phase of the cell
from which diabetes is then cured

and 3 is the same thing again Yes healthy person

and it turns out that you concentrate
health structure
in one local point of information

from the point of view of general connections
you really are transferring the collective Reality like that
that he becomes healthy

This as if second action in management

and the first action that you really control is due to that
all you have to do is find the basic mechanism
there regulation there For example Well there liquid phase Yes
or let's say So solid phase inside the cell
and you already have this information through the general
communications system
in fact, you transmit it to all cellular elements
inside the body

it turns out that you work in this case
not even with a specific cell
but you just work with the diagnosis itself

and when you do such an action
This is where stability comes in
i.e. the sphere of recovery point 3
she just starts to glow
i.e. you see that you have done the necessary action at this time
the number 3 starts to glow the number itself
it just becomes immediately obvious

so you made the control
By For example treatment of diabetes

as you just noticed, I didn't say it on purpose
that it was about a specific patient Means
because in general information has
universalism in terms of understanding
here is a diagnosis, it can be treated
and this treatment is transferable in principle Well those situations
when the diagnosis actually exists in real people

and here is the system of concentration by numbers
For example "Restoration of the human body by focusing on numbers"
this is precisely the universal system of regulation
which spreads regardless of who the person is
i.e. neither from age, nor from situation, nor from event
constructions
but it's just the norm
i.e. exclusion of the structure of the diagnosis
from as if general level of collective Consciousness

and as is clear here
an exception occurs
as specific technological actions there
by concentration
and the fact that at the same point
repeatedly as if the Norma system is activated

and it turns out that this is Norma
becomes averaged later

and when it is in the average version
gets to a specific person
he becomes healthy

i.e. it is basically a system

in fact, again, macro-regulations in essence

therefore any concentrations

For example in the system of body restoration by numbers
this is a system that simultaneously with these concentrations
First produces Macroregulation
i.e. regulation occurs
in the direction
preventing a possible global catastrophe
and technology development is carried out
Eternal harmonious development

so in principle

here you can in these numerical concentrations
even as an independent work

leaf through this book For example

look at the numbers Here connected

where in the enumeration of numbers in a series of numbers

For example in the seven-digit system

where is the sphere of Macroregulation

this one here so called well sphere 1

you can find it there

sphere 2 where it is located etc.

i.e. in this way it is possible to find
see the connections between diagnoses
make an analysis of diagnoses

you can create sequences of numbers this way
in order to generally speaking work with any situation
and have sets of numbers for situations
it's very simple

if you take For example this eight 8 Yes Means

and consider that this is how the numerical series is formed in
general

Means there is an eight 8
inside which is located
just for just 1 2 3 4 5

i.e. there are a total of as if as if six Well 1 2 3 4 5 and 8
inside eight (8) there are six numbers together with 8

and we have to enter one more number
Well where is the eight 8 anyway
what is it on in Consciousness
and it's very simple Yes a seven-digit series is obtained

if we want to add let's assume to this system
Well as if two degrees of freedom
and make an intensification in action, i.e. in development
we can find the eighth number
which is basically the eight itself (8)
or add nine 9
which is a development of this 8

and in principle you can do it this way
create number series in a very simple way
just to indicate everything
the supporting platform this is the number seven 7
what is it like Yes in this particular case

and how they are arranged within the projection row
i.e. if we take the eight 8 as if this one
Well shake for a long time conditionally Yes in hand
and then take all these numbers and pour them out
this is how they will lie on a flat sheet

That as if the mechanism of this one Well the shaking itself Yes
ejection mechanism

it is always the same for specific diagnoses

because we throw it on the sheet of a specific diagnosis
and while they fall
they are very strictly and specifically placed
in a specific as if horizontal version

and in principle this is not necessarily a diagnosis
it could be a specific action Well let's assume human
he wanted to go somewhere and do something
wanted something to be organized Yes

here he can as if act in a very simple way
shake out the numbers on the horizontal system
and use these numbers as controls

Means second level i.e. next lecture
i.e. you need to use it now
for specific cases that currently exist
and immediately diagnose their effectiveness

as management at the information level
as well as control at the physical level

by next time
i.e. who For example will want to use it for that
so that the questions are already formed
or somehow decide on a system
that's exactly Perception
it is best to do this right away
literally right now
before moving on For example to the next level

those. Well Just Here as a practice
take each one put your event
here is any in front of you

highlight this event
best first in the form of a sphere
I took it and put it on the table For example there event now

then took this sphere
and so that it turns into a plane into a sheet

what event do i know
I don't need it there to detail it For example Yes

every person knows
what event does he want to highlight for himself
there are no special details there, actually

Here I have highlighted as if like a sheet of paper
then I took this eight 8 understandable
she's just an eight
and inside there are five numbers

and I need to do 1 2 3 4 5

here is seven 7 is the seventh number Yes
this is the sheet of paper itself

Means and so we take
and must be thrown on this sheet of paper
this is how these numbers will be arranged Yes

if you think about this process
then basically numbers Well as if are being arranged

in fact, according to a certain Law

just take it
and in relation to the same event
several times just throw numbers right now

as soon as you
just throw it and watch for that moment
that one of the numbers is some
Well For example there eight 8 Yes

Where as if you must perceive the element
that it falls almost always
to the same local place on the sheet
one number at a time

i.e. you start throwing
and it keeps falling
to some one and the same place
i.e. it as if does not fall arbitrarily in Perception

as soon as you captured this moment
all eight 8 you have somewhere lay down Yes
start throwing other numbers

here are a few times when you are there three or four actions
you can immediately determine
sequence of numbers

Means Of course, there may be variations
i.e. some number

tries there Well as if in your Perception
get to one place and then to another

but nevertheless these are already variations
it's just necessary to tighten control over the event again
i.e. remember as if you will fix it too
system
and work in this system of numbers

in principle, the number of options
there are hard numbers, then look
and there are some that move

as an independent work
will it be possible to do this

on specific events

(Replica)

I'll finish the conversation now

the next level is like this
that I will now give concentration on Means letters

i.e. how to work with letters
to get the desired event

Well with letters actually
work there it turns out that even easier
in terms of implementation
there is no need to build spatial structures here

i.e. it is not necessary ^{there} transfer ^{For example} in a flat row
if you want to work with a flat sheet
which by the way is not necessary
you can just work with the same eight 8
in spatial connections ^{Well there} in a three-dimensional system
^{Means} or in two dimensions
but in Perception ^{Yes} do not lay on a flat surface

so here is the element of working with letters
it consists of the following
what when you work ^{For example} in Perception
and work with the number
that number in your Perception
has ^{Well} a more stable phase

those. the number is visible
and if you take one ^{For example} number eight 8
then it is quite simple to observe it in Perception

and if ^{For example} take the letters
and write some word
then it starts ^{as if} move
and keep a long sentence that
^{Well} in my memory so ^{or what?} in Perception
this is necessary ^{as if} the man still needs to train
to keep in Perception
some long phrase

i.e. the person understands the phrase
but here is to keep in optical Perception
this is already a different system
namely volitional control over the phrase

therefore in this case the space of Perception
i.e. what happens in Perception
the space of representation there is work on the plane

For example for the number
This as if it turns out to be a different type of space Here

i.e. if we put on the number
information
or there we work through digital
then translation into the plane of the physical plane
This as if certain as a matter of fact conversion
transformation from your space of Perception

then this is a fairly discrete action
and it in general happens in leaps and bounds
And Means here the translation itself requires that
that we must repeatedly as if Here
well for example the same number
output to the same place

but in order to work through words through letters
here is the system that exists in your Perception
and the system that is in the plane
they are close enough
and for a certain level of precisely fast control
often it is generally as if as one and the same
by technology of use

if in digital technology For example use of Perception
here in this method
this is the work inside this lower ring
inside the circle of the figure eight 8

That Means to work through letters
what Perception

that work on the plane
it's the same thing
nothing is needed there as if exactly activate it
from the point of view as if access to physical space

in this case it is this "sifting" Yes letters
it is access to physical space
Means and transfer to a planar system

if we talk about words about letters
that is, such a principle that Well For example such a principle
that "in the beginning was the Word" Yes

but the word what
a number is also a word in general there
"one" is also a word or there "eight"

but here is the Word
it organizes the supporting platform

as if Here the number 7 that organizes Yes
in the beginning was the Word
which as if is coming
precisely as an organizing pre-organizing system

and therefore it is possible to work with words immediately, generally
speaking
at level Well For example planes
or at the level of Perception
and at the same time For example get a comparable result
no matter what level you work at

and here the technology is as follows
what you need is just for everything there

It is best to write down the management goal
or at least formulate the goal of management

Means any there For example What Means need to buy there ice cream Yes
just any simple management goal Means

and here Well clear enough
this can be kept firstly in Perception
there "you need to buy ice cream"

is it possible? there Well if there is some more complex management
goal
can you write it out there

and then as soon as you write out or there keep in mind
then the management consists of
what are you first Means by level
That's exactly it again, Macroregulation
concentrate on the top of the letters

let's assume "need to" Well letter "n"
it's just divided there with a line in two
Well "u" there conditionally is also possible
along the axis of symmetry, simply divide into two parts
just divide geometrically as if
take a ruler and divide it into two parts of approximately equal height

And Means Macroregulation sphere
this is the top part again Well by analogy with the number

Means and the lower part is that in the letters you do concentration on
each two letters in sequence

those. For example " WELL" concentration is done below
i.e. it's as if you're holding your attention for some time

then you leave as if optical beam
you bend from Consciousness

then you take it Well make the concentration further Yes
first highlight the top part again there Macro regulation
then the bottom one

then "n o"
and you are like this as if bent this word
i.e. in Perception you got it
convex as if Push
Well arose Means a kind of lens in optics
in Perception
what did you take and bend back as if the boundary of perception
hence
therefore, since you bent it back
you got more rays inside
Well how does the lens usually work
you got more rays
inside actually systems
which organize the purpose of management

Well and accordingly we need to push these letters further
there "buy ice cream" is the same
exactly two letters

Means then when you did
one such step
then they made the second third until then
so far generally speaking these are the letters
they won't curl into a sphere
as if you must pay attention to catch this moment
if possible
that it will begin to curl into a sphere

as soon as the sphere collapsed
trace that this sphere Well as if
rose vertically upwards better

and at the level of your Perception
this sphere
there she was already transformed into this ice cream

Well This as if such a far away control
you don't have to do this
you can limit yourself to just one element
just by concentration
on these two letters in sequence

i.e. it is possible as if do not follow the development of the sphere
you can not see this ice cream let's say in Perception
but then a few times is enough
bend these letters in sequence
by such concentrations

hence
this is management, it is like that
what's here as if in principle, there is no need to invent anything at all
just take and divide the optics into two focal points

as if first focus
what are you doing bulge on one side

and the second focus
that due to the fact that this
a biconvex lens gradually appears
here in Consciousness in the World everything is similar
if you have failed somewhere
on the other side, a bulge also appears

and an ultra-high concentration occurs

which, like ordinary light, begins to spread
that's all

and you achieve your management
Well event structure Macroregulation
just on the whole topic
what did you do concentration on the letters
i.e. there are no problems there at all in principle

Means but what is the universality of this system?
what is the universality of this system
what are you doing first of all really Macro regulation
i.e. you put the meaning of Salvation of all
to the top of the letters

secondly, you get an effective system
Well without using as if system of associative thinking
no special plans
without using the system of multidimensional Thinking there

but just for everything Well the concept of "concentration"
often just to "hold attention"
on on this part of the letter
and that's all
and you don't need anything else there

if you want to strengthen
then you can use
there are already other ways of concentration as if gains Yes
enhance the optics of concentration

but in reality
it's often even easy to delay
concentrate attention

I think that this is universality
especially in what it is Well useful
and everyone can master this system very quickly
in that here only for everything are used
Well specific letters

For example Well specific element
I once handed over control in an aircraft
so that the dispatcher receives a signal in time
that the plane needs to be stopped

and considering that the dispatcher has quite a lot
Well there control systems
and the signal transmission was almost touching Yes
it was a passenger plane
and stop there Well it's quite difficult
If For example fail to provide justification

Means but nevertheless I just passed it on
Well as if such a note Means
so that the plane would be stopped
and concentrated on the letters
that's exactly it as if by pushing

i.e. by means of this pushing
this note as if it is part of the dispatcher information system
most convex
this is how you can work with documents there
you can work with the situation

firstly, how does it affect the situation?
that's how it works with documents

and in principle there is a dispatcher there
Well in fact he really is

stopped the plane there delayed the flight in general
what was necessary then
but he did it simply based on a note
what is he doing anyway Well, actually speaking shouldn't have done
In fact

Means and that's why it turns out
that it is possible to work through such systems
in general in those cases
When Here Well there to save some situation
even the system works
which as if is not included in the organization's regulations

i.e. you need there to be no takeoff
or something to achieve something specific
a kind of external help comes, external reinforcement
as soon as you log into the control system

because as soon as this optics starts to develop
there are many external regulatory systems
who start to help

and things happen that
Well logically Well there dispatcher
he actually has no right to stop the plane
according to the note
there you need to first of all as if a lot of things
to stop the plane
justification to give

and therefore, nevertheless, such cases
there was such a specific case in my practice
I passed on a note, and I didn't write the note.
I just called to write
there is an employee there Well there engineering and information center
and he took it and brought it and put it on the dispatcher's table

but even if I had written I would still have been
Well after all, as an inspector I could stop
and he couldn't at all, he just took the engineer and put it down
Nevertheless, the dispatcher stopped the plane

Here as if this system works
Well there was just talk about that
what could have been the general situation there
what is possible Well it was possible to get such a result during takeoff
what's there Well as if the glider of the plane split in one place
and it would have been a catastrophe in the air
but this was later proven true

Means That's why as if the situation there is like this
what else does the system work
Well peculiar or what? pressure from those people Yes
in optical or what? variant
who are sitting on the plane at all, i.e. they start
their forces that surround them there, etc.

i.e. this kind of external help still works
and you can even track it
if we are talking about the possible there prevention
some problem

although you can do management here
for any tasks at all
because the more you work
the more you practice and the more results you get
Means it is precisely for the Macrosalvation system

i.e. in this way you perfect your Spirit
in terms of readiness to manage the situation

Means the next level is color management

Means color management is about
what's really there as a matter of fact simplification
it gets even bigger

because you are in color management
in principle you don't even need it there
concentrate letters in Consciousness there or numbers
and all you need to do is perceive color

and here it is as if color overload
The perception of color is like this
that the principle is initially very simple
and it looks like a principle as if sowing numbers from eight 8

Means what do you take as the goal of management
in the form of For example there silver colored spheres
just take it and assign it
there as if there are no problems

they took and appointed that this is the goal of management
is located inside such a sphere

Where this sphere is located is also basically irrelevant
there at least in some galaxy
even in front of you
or in your level of Perception

but it is better to work near the physical body
better as if assigning a point

but in this case it doesn't matter
for color

Means and then
when did you form this management goal
you start Well as if sow
in fact, this is the process
that you should perceive the color of the control target

there may be more than one color there
For example there is light purple at first
then green Yes
some other shades came out

but here in this color management goal
main
just like in letter management
stick to the "it's two" principle

i.e. as soon as the first and second colors floated
we need to fix it

and here is the correct fixation
the first two flowers that appeared
i.e. you have highlighted the first two colors
and recorded
and the rest as if they took it and cut it off

Well i.e. they did not allow this plot to develop in their
Consciousness Yes
as the movie was taking place, the VCR tape was turned off

Means this is management by objective

first you do neutral
silver- For example white
in the goal

then you leave this sphere in front of you
and wait until it floats out of there
the first two there stripes let's assume first and second color

they just float out
they can then expand infinitely
Well and let them expand
The main thing for you is to remember these two colors

memory works here
remember the first two colors and that's it
you filter out the rest

and these two colors as if
already translate it to Spirit
The spirit remembers, he knows that there were two colors.
there is no need to even keep it in memory any longer
then the management takes place
just through these first two colors

Means and is being implemented further
there is simply nothing to do here

because color in human perception
has the property of Infinity
color For example when did you perceive color For example there blue
but we don't say what size the blue color is

it's one thing if it's painted somewhere ^{Yes}
on some board ^{there} specific
it's clear what the approximate size is

but color has no size
it is closest to the spiritual Perception of information

so when we talk
about the structure of art culture
We can convey very strong control through color
because the color still has forms ^{Yes} some finished ones
inside ^{there} some work of art, painting, etc.

^{Means} so here is the control
here it turns out ^{Well} completely simple
A ^{Here} principle why "two"
because this is a principle that comes from the Creator

When ^{Means} we are talking about the second ^{Yes}
this is the whole development of this ^{Well} all development of the world

The Creator is the One, the Universal and the Whole
He
All He had to do was create a "second" something ^{Yes}
the second particle of some kind ^{there} "any second"
it turns out that the entire technology of the World is embedded here

that's why we work for real
this is how the Creator works
one
two

^{there} two letters ^{there} two colors
and this is the principle of the Creator's work

and why exactly "second"
this is really the whole technology
to create at least one microelement
then you need to know all the technology of the World ^{Yes}
development of the world

that's why we work in this case
exactly by two elements

^{Means} next level i.e. next lecture
this is work through sounds and through forms

^{Means} working through sounds and through forms
includes some generalization and some unification

^{Means} or what? Well total more ^{as if} general prevalence
greater depth and development

^{Well} here are the levels ^{For example} works through color
^{Well} including through numbers ^{there} letters
because the form

^{For example} when we work with a letter
we have to perceive it somehow ^{Yes} or ^{there} word ^{Means}
or even color

i.e. it is something that should already exist somehow
manifest ^{Means}

and if we work with form ^{then we can} or sound ^{For example}
^{Means} we can work ^{Well} to a greater extent in form
at a level where there is no organization yet
any ^{Well} as if ^{perceived} system

that's why it turns out that on the one hand
This ^{Well} it turns out to be maximum simplicity

in development in For example let's say access

because working with systems
which are not needed there remember there
or not necessary For example fix them somehow
quite simple
i.e. it turns out that as if no problem at all
work with the system that exists
even before the organization of information
it turns out to be extremely simple on the one hand

but on the other hand, in order to organize it
some resistance must be overcome
some system Well pressure of this internal environment
Means that exists around work Yes

because where the system is not formed
it turns out that
and to work
you have to have super high at the same time Yes
have an extremely high concentration of Consciousness
by the logic of the action and by the task of the action

because it is generally possible to work from the start
through the form organizing the information itself

and here is where the peculiarity arises
in this principle of operation
on the one hand it is very simple
on the other hand, it accumulates the maximum concentration
which can be For example create
by using the same technologies
there works For example on the word Means digitally or by color

i.e. the principle of operation For example on sound
consists in the fact that
that first you define the pre-sound
pre-sound system
here's to the system
i.e. you just take
and set the goal of management in this way
what is this goal for you Means you are taking out
into the system Means which exists before sound

this is what organizes sound

Means Well It's clear For example it could be
there some tape recorder Yes For example
in the logical plane of Perception
among the elements of the physical World

A Means from the point of view let's assume information
what organizes sound
Well or there you can hit a guitar string Yes
For example sound organize
but this is again an element of the physical manifested World

so here it is as if situation of control of elements of Reality
physically exists
because the control that I give
this is the management of all elements of Reality

most Well it's clearly visible here
that's exactly what's in sound control
we come to the question of what Means
What control as if consequence, i.e. element sound
we need to create a tape recorder there first
or find this guitar somewhere with at least one string

Means and it turns out that here
a very simple Law of creation of matter is visible
creation of Reality in general
by level as the Creator does

to create Reality
you need to have it first of all Well that structure Yes
that state of the Spirit is the state of the Soul
i.e. to have a Soul
created by the Creator Well what is created by the Creator

because the sound
it is organized in this case from something

Means if we can perceive color For example Yes
How Well color of the sky
sound is basically sound too there

but in human perception
this is exactly the element created

and that's when we'll look at it here
this aspect is more profound
then we will come to that
what is the creation of sound
this is a sound form

i.e. we can create sound
form
in your Perception
and when we take the form of light there
we just select the shape of the light
and create sound

then due to the movement of the form
Can generally speaking create a melody
and this melody is as if control

i.e. maybe not a melody, maybe just a sound there
For example intense sound
this is the solution to your problem
where form is the goal of management

and here is the connection of form and sound
you get a connection
"two in one" Yes vice versa

then we used the "one and two" system
and here it's "two in one"

This is a principle from the Creator
it all comes down to the Creator

and then it turns out
that we receive control precisely by the goal

therefore as
just make such control now
take any task of yours
and make it so that the sound intensity
which you perceive
and you see the shape of this sound

i.e. by adjusting the shape you change the intensity

it's already very loaded as I said
this is the second element of the load
it is the density of the control flow

here you feel and see
you perceive that as some kind of wave
here it even presses a little
this wave
but this is concentrated management

you can take the same task again
and catch the sound that corresponds to the solution of this problem
on on Well let's say So hidden Perception
on mental Perception

and at the same time move that form
which corresponds to the management objective
Just Well any form
here even the form of the management goal is precisely
it may not be a circle or a circle
namely the real form in your Perception

here in this management the main thing is
in the first act
catch sound intensity of sound
Well How it's just the intensity it can be
there high sound low any

the best thing is the sound
multidimensional sound it is distinguished by the fact that
that it is not necessarily a specific melody

then you can translate the sound by the way
into a famous melody just into a famous one
which on the spiritual plane you remember her
but you may not even remember specifically

or you can simply translate it into a famous melody
and fix this melody

and then
form of government that exists
i.e. in the form Well exactly as if some kind of peculiar cloud
in Perception
I don't necessarily say that there completed form
simply by moving this form
adjust sound
Well like a guitar there are setting up
adjust there Well any tool Yes
just adjust the sound so you can see
what is being implemented

it is possible to carry out control at the same time
For example supplement control
Well there through Perception you must see and as if to realize
that this control is actually happening
at this sound

and here's the thing Well a peculiar simplicity in the future
of this management
that in the future you will simply be on everything
you can specially work out the sound there no
the sound is very easy to remember

and this is the control
which has a long lasting effect
i.e. having found the control sound
you just go on Well how do you do any business
and then you can just see the sound
in Perception

and by the way, the perception of sound is on a physical level

is perceived precisely Here Well For example there with a specific ear

i.e. this is exactly the thing
which is perceived
close to the physical body
and is formed in this way
which is also according to the Law of the Creator
that the element of Reality forms precisely the human body

i.e. it is a very harmonious system
where management simultaneously forms
your health

in all other cases
management also forms
your normal health

and as an independent simple work
you can watch this

but in sound Means it's clear here
what sound does a person listen to
and he For example listens with the physical body Yes

external sound
simultaneously
internal sound

it turns out
external
creates inner Reality
i.e. the human body

so you can see
how is the transition to the structure of Eternal development going?
where the principle of development is laid down precisely in Eternal development

that every action is such
that it is directed towards Eternity
because it is infinite
and at the same time forms a local system
you i.e. a person
as well as its external surrounding appearance

Well level there

For example World

people
social status, etc.

Means as a practice

Now I advise you to practice
on various issues

Well just to practice right now there

to see

how does the system work in terms of Well some tasks

using one system or another

which Well to you For example do you think

it is the most effective for you

i.e. you can work right now

and based on the task
that the transfer of even one level of control
even minimal information
there should be control anyway
affecting macro interests at once
i.e. the principle must be realized in Macrosalvation

i.e. having listened to even a short introduction now
you should already be able to do Macrosave

already know how to do it now

but you can also say yes to a certain extent
this is happening to a certain extent
because the next second
exists ^{there} Earth no destruction
it means you did something right somewhere
i.e. find this system in yourself
your individual
and see what exactly you did

as soon as ^{Means} you will do these actions
now it's clear what needs to be added and built up there ^{Yes}
either situationally or technologically ^{there}
what specific courses ^{there} amplify listen
what additional information to find

i.e. create an algorithm ^{as a matter of fact} in many ways even
self-educational
on technologies of development of Consciousness
in the conditions of Macrosalvation
and precisely that from Consciousness
you can regulate the whole Reality

i.e., actually, to make up
a unique educational plan

which is then implemented depending on the goal

as i said they exist ^{Well} various techniques
more ^{Well let's say} extended in-depth
by various concentration technologies

here it is important to decide on that
^{Means} what is immediately most effective

and it is important to track the specific result
as at the level of what if you see
that you have shifted the events precisely according to the Macroplan
and you didn't allow it ^{there} macrodestruction
perhaps this should be recorded and noted somewhere ^{Yes}
in writing it's even better

and the second
This is a must-monitor management
private events at the physical level

because it is this management
first
it is in many ways the most important
because the shift of macro-problematic events
this is the main goal

main goal
prevent macro-destruction
prevent a problematic event
or improve ^{Yes} current positive event

^{Means} and therefore here is the management at the information level
In fact ^{it} it is generally more important
in the plan ^{Here Well as if} strategic ideological

but so that such management is always carried out
you knew it for sure
you need to control very correctly
physical level control
to see that your actions are on a physical level
^{Well} They ^{as a matter of fact} lead to the same thing ^{Yes}
control is carried out at the physical level

^{Well let's assume} I ^{there} having made a series of diagnostics over four
hundred

there for certain types of expert opinions
in one airline alone
national airline of Uzbekistan

all 100% confirmed
precisely according to the conclusions of the experts who took it into
the safe

I For example Well then diagnosed in space technology
and now I'm diagnosing

and at the same time it is an absolute coincidence too
but this is space Well it is located further away as if
in a logical sense

Well then i diagnosed there let's assume surface of Mars
I think there was a newspaper publication in 2000
"Development option - "forecast" in my opinion in this newspaper

and although at that time orthodox research
including optical type
Satellite systems believed that there was no water on Mars
but I gave the diagnostics that there is water there
and moreover there is a certain form of vegetation

in March of this year too Well was published
that American satellites found water on Mars
and I think April 7th was also
Means information on central television
what did you find Here green areas
they think it's chlorophyll, i.e. vegetation And

but although with those research tools
which are powerful enough in general
satellites are long enough Yes flew around Mars

at the orthodox level everyone believed that there was no water there

i.e. it was as if 100% proven
from the point of view of optical systems

but nevertheless for some reason Yes
they found it after all
but I did give a forecast
although Mars is even further than that, there is some kind of space system there

so the situation is like this
what is important to determine first of all
exactly as if access level
and try to work Well regardless of the distance of course
regardless of as if some level of implementation

but to work precisely at the expense of practical systems

i.e. the technology that I worked out on airplanes
I basically use it
those. as if no problem
I take and do the same action
I look there and I know for sure that it really is like that on Mars

but I can, in principle, and I know that Yes
i.e. actually, we can say yes
there is simply clairvoyance Can
but we need a precise control tool

and what is exact is analogy

and therefore having worked

Well there on a plane that you can touch Yes

can we diagnose further?

the same principle applies to space systems there some planets, etc.

Means That's why as if here is work on a physical level

i.e. confirmation at the physical level

quite an important element

although I'm not saying that it's there for all occasions

or is there something extremely important

but it is quite important from the point of view of that

that you will have your own instrument

that you can at least rely on Yes

when it is needed

of course there may be cases

when you can't lean on anything at all

then it's still necessary

Means stability of spiritual perception

diagnose

but it's better to create systems as much as possible

and practice as much as possible

simply in all cases of life

just in all

then you dial Well colossal experience

which speaks volumes about that

that global catastrophes do not occur

and one hundred percent is provided

Eternal development of humanity

and Eternal

under conditions in the same physical body

Where

for everyone

Means so that's where I'll end it
the first introductory lecture
