

GRIGORY GRABOVOY

A course of lectures at the Russian Emergencies Ministry Agency on monitoring and forecasting emergency situations on the topic

**Irrational methods of prevention  
global catastrophic processes  
posing a threat to the entire world**

(4)

14, 21.09.2000

QUESTION :

*But the Universe was born right, yes  
what is it called it manifested organized correctly  
i.e. it didn't seem like that to me initially  
i.e. a child is born there born dies  
there is some kind of cycle after all*

G. GRABOVOI:

The thing is that regarding cyclicity  
yes reproduction of matter  
at a time when global destruction is possible  
i.e. a change in the historical form of the development of information  
there is a very simple principle  
The Creator created natural forms there  
the same birth of the Universe  
in order for there to be reproduction

because here there is the principle of the Eternity of the Creator  
i.e. the Eternal creates the Eternal

The Eternal Creator originally  
must create Eternal structural elements

This is the Law of Information which can even be proven mathematically.

at one time at certain levels of research  
so, well, somewhere it went through the patriarchy  
and even one of the journalists  
which we assume was in the form of a man  
who was in contact  
between representatives of religious organizations

let's say with the patriarchy

he said that from their point of view  
Here I am, for example, in one of the formal things  
actually proved mathematically  
the existence of God

the existence of God is like the Eternity of elements of information  
i.e. existence means Eternity of elements  
The Eternal, according to the Law of Connections, can create the Eternal

and therefore when the threat of destruction arises  
as if a predetermined cycle of development  
then here is precisely the concept of cyclicity  
i.e. in this concept we assume for a person  
this is a possible, let's say, biological death  
falls away as a kind of development goal

because in this case it is clear yes  
that when this point exists  
then it turns out that this point leads to macrodestruction already  
and to logic  
logic generally changes as if to the opposite side

so from the same point of view  
creation of the Universe there Macrosystems  
one must always imply periodic logic so let's say yes  
current logic

REPLICA:  
*but there is a Norm, whether it is cyclical or not*

G. GRABOVOI:  
yes Norm which is from the Eternity of the object

QUESTION:  
*I also wanted to ask, at least I liked it  
when you were talking about transfers  
well at least in technology, in anthropogenies, here  
now it is very wide for creation for example there  
some expensive drugs there medical  
biotechnology is being built into genes  
well, some elements in genetic engineering of these very  
when they do, for example, insulin  
which is in very short supply there, very expensive, etc.*

*there are technologies when yeast cells are taken  
and in their apparatus hereditary  
include an element that produces insulin  
and makes them work and do  
Actually, this is some kind of biotechnological direction  
it is here in your works, in your efforts  
it is somehow present*

G. GRABOVOI:

Well, the thing is that I give in practice  
universal technology  
which of course is aimed at creating biosystems, among other things

i.e. first of all  
you can do self-regeneration  
restoration of any biosystem in general and not only biosystems  
and we can call restoration that there  
any information system

so from the point of view of biotechnology  
even assume in a specific application  
using the same crystal module  
led to the fact that, for example, we did tests there  
managed to achieve the Norm of cells

at the same time they were primary there  
so far we have managed to achieve something there  
well, like in small quantities  
and outside the body these were cells

so they were taken there in the field of view there are three cells  
which had the appearance of cancer cells  
when using this crystal system  
managed to achieve the Norm of cells

those. in biomanifestation  
Well, to put it simply, a device that simply regulates the system  
and that's all  
from the point of view of the Eternal reproduction of life

therefore, as well as in order to regulate earthquakes  
so that there are no earthquakes  
normalize the environment  
health can also be standardized

in this lecture

I will show the formal apparatus  
which allows the achieved structures, for example, management  
I would say do it in batches

i.e. for example you have some kind of management level  
or have developed a management system  
from the point of view of your Consciousness or let's say the hardware level

and then the problem arises  
synthesize or combine  
for example, technologically some levels  
either they are completely different or they can be of the same type

but to create a package means control impulses  
to achieve a specific goal  
i.e. I would call the control level package that way

since it is a packet technology it means that way  
what you can do as i explained  
create from levels completely distant  
i.e., for example, solving a problem in contradictory ways  
or in similar ways

and what's more, you can  
for example, take packet technologies  
using possible future situations  
or using hypothetical or real past situations

i.e. in this case under packet technology  
I call them large arrays of information  
which are used in synthesis or in combination  
in order to solve a specific problem of Salvation

in connection with this, the structuring of your Consciousness  
should be like this  
to be on the same level  
were located  
perhaps even mutually opposite controls

and for this  
you must create the source in such a way  
so that it functions  
depending on the control pulse

it's on this principle

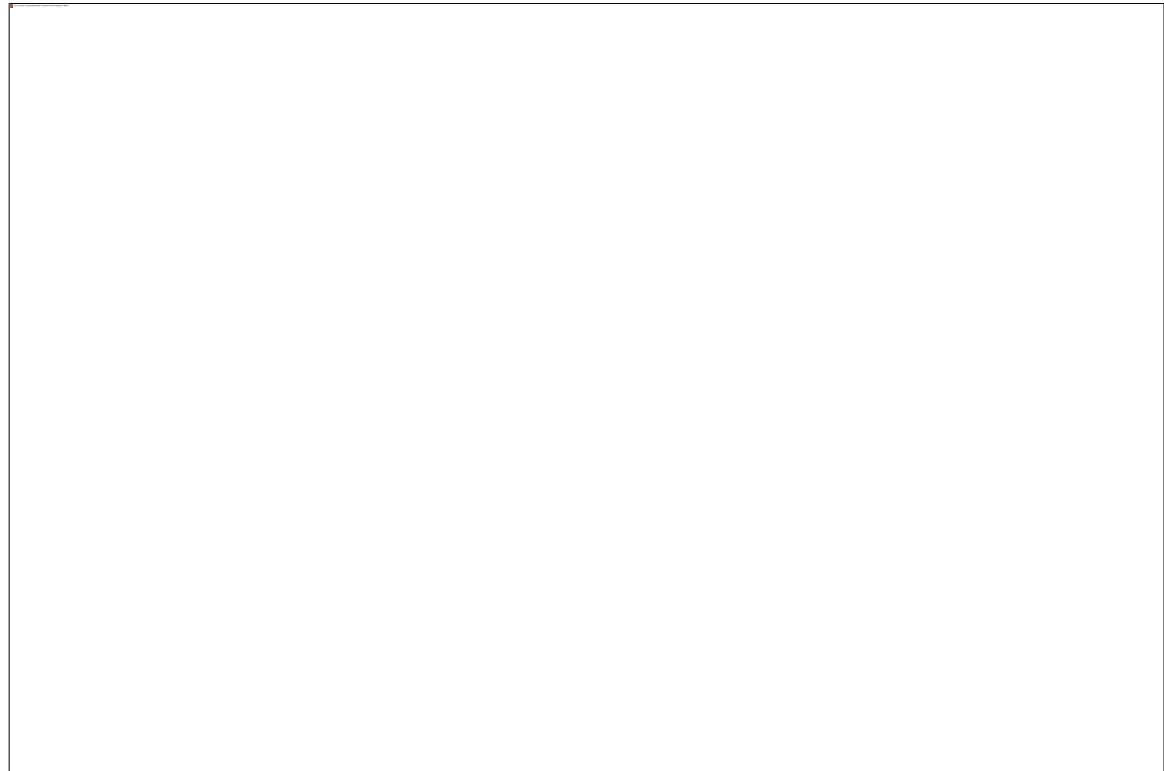

this technology will be built

so to explain at the first levels  
on the model plan  
batch control technology  
which is as I explained  
synthesis of already known and unknown systems

then I'll write it down first  
in model form  
control area

in this case  
for example, taking the control plane  
which implies the presence of internal tasks  
I'll call it the letter B

and for example external tasks  
I will call B with index B

then for that  
so that the control area is implemented

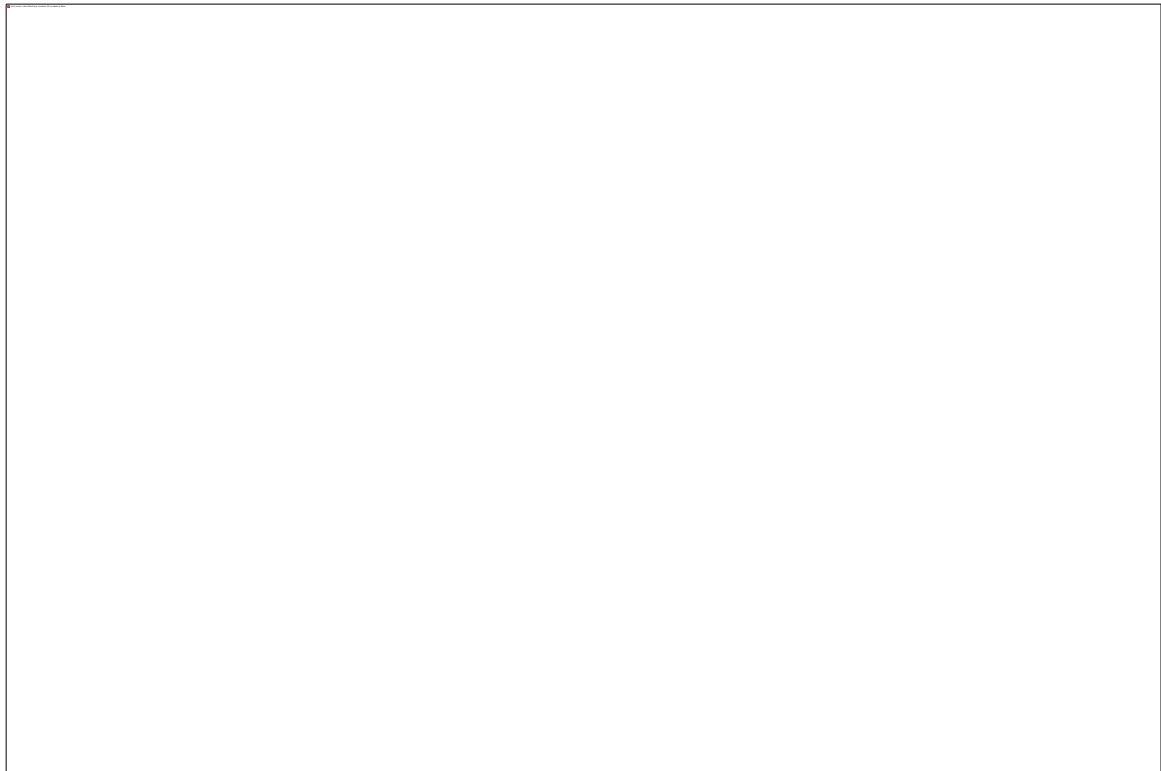

you must according to the design of your Consciousness  
here I am postulating it again  
because it can be achieved technologically  
for example, including tensor analysis

but nevertheless in this case  
you have a real course of management  
so they just have to know this in this case

in order to get  
Compatibility of tasks  
external and internal level  
by management objective

you must  
thus organize the boundary conditions

for example I will call the boundary condition  
segment A from B with two indices and A, for example, from B

so that the properties are satisfied on the boundary  
the properties were satisfied  
the properties were satisfied

intersection of any boundaries  
internal region and accordingly  
mutual adequacy of the boundaries of the outer region

means intersecting  
this meant geometric parameters  
which say that if the circuit is closed  
then they will intersect somewhere in any case

and the second level  
this is the level of the superstructure of your Consciousness  
which allows you to switch packets

i.e. you can from the external level  
to actually assign, for example, control over an area  
introducing the substantive part of management  
the one you need

i.e. let's assume if you have  
well, in the form of an objective function  
so don't allow let's assume the first level is packet  
prevent a forest fire, let's say

then we can have a matrix  
next content

which implies that  
that on the boundary conditions of control  
then you have a combination  
external levels of your Consciousness

the point is that it is necessary if possible  
write out the index system more carefully

i.e. each sublevel  
it is located lower in this matrix

then accordingly  
there are some N members here

so when you have for example  
this control matrix  
then your Consciousness, for example, is based on the index K

for example in this member A index B index B index N index K  
may be just that link  
where are the levels of external control  
combined  
with the level of internal management

in this case I postulate  
the principle of control through Consciousness  
because Consciousness is structured exactly like that  
that just concentration at this level K  
allows you to prevent a fire, for example

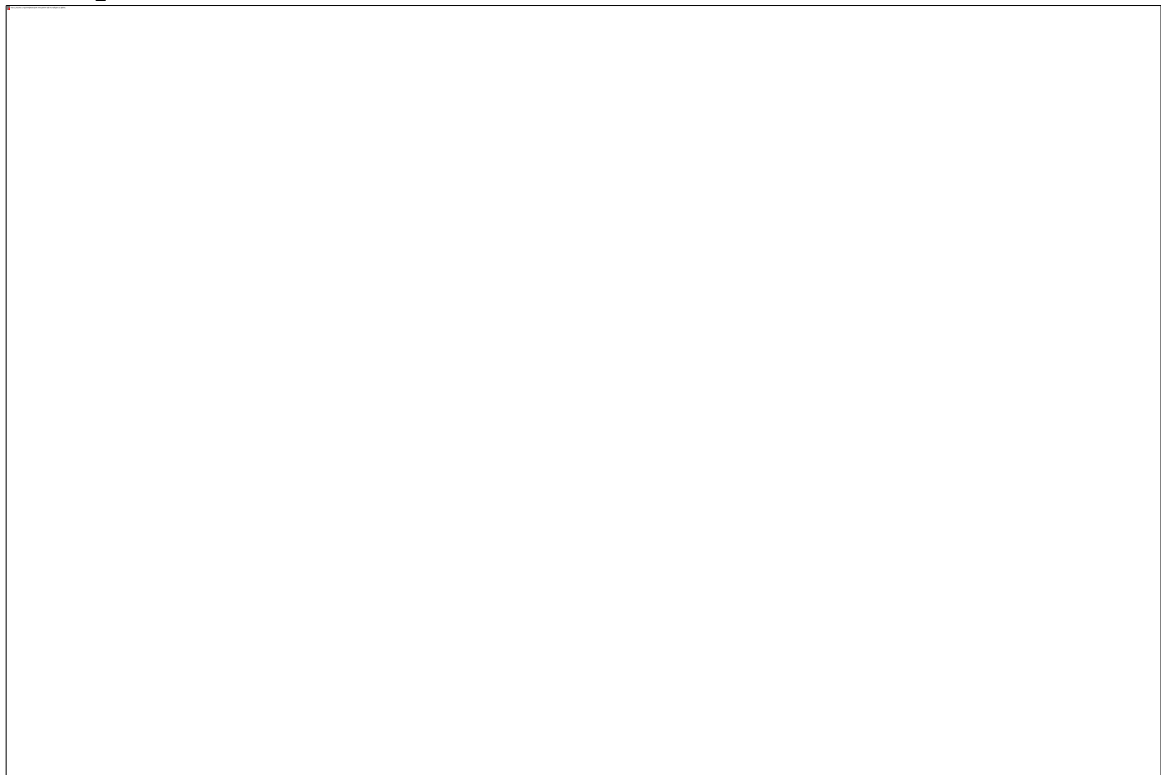

i.e. Consciousness can reduce, for example, temperature

and it turns out that if you have this matrix  
then for management  
it's enough to concentrate even on a sheet

and put the program here  
fire prevention  
or for example stop the disease  
then the treatment will work

or to prevent, let's say, an accident, yes  
then it will work out  
you are interfering with management  
and do not allow accidents to occur

if we take and denote this matrix  
like  $A_1$

then you can get  
batch management level  
or control through a generalized domain  
as follows

that the determinant is the determinant of the matrix  $A_1$   
this is a constant  
divided into the generalized control region  $G$

so considering what we took  
matrix determinant  
in the usual sense of this word  
"determinant" determinant of matrices

and we have a control level constant  
i.e. this is in principle  
any system you want to organize

in this case  
a constant is simply a norm of events

and putting it forward here, for example, in the form of a constant  
the absence of, let's say, the same fire  
or there is the absence of disease

then concentrating simply on the G index  
just on one symbol

you get all the model solutions within A 1

in this case you can  
get to develop your own clairvoyance  
controlling clairvoyance

when concentrating on G  
you can see inside  
at the level of your Perception  
real events that happen in Reality  
and which, for example, can be current  
or future events

if you look, for example, at the end of the first volume  
there is a protocol from the mission control center  
so there I gave a forecast, for example, of the functioning of the computer  
I said that it will function there for five days  
that's how it happened, that's how it really happened

and the whole package of tasks  
how many tasks were there  
That's how many answers I gave  
they all matched

as well as in technology  
everything that was deposited in the safe  
it all came together

i.e. all expert levels gave an exact match  
by forecast phase

i.e. it turns out that the task of real Salvation  
still appears when necessary  
absolute i.e. one hundred percent accuracy

and for this we need to form  
multiple accesses  
and fixation of, for example, some static phase

in other words, at a multivariate level of events  
you should get a specific event that is being recorded  
which is what you need specifically  
and decide

let's assume if we consider  
there I also gave a forecast for the docking of Atlantis, for example  
due to engine failure  
possible deviation on "Atlantis"  
and in general about the docking  
all forecasts matched at the batch level

look how I did it  
how did i get these results  
at least for example in the field of space  
if you take what is written at the end  
and at the same time, from this point of view, consider the technique

then you need to look at it from this point of view  
how did i get this

i.e. for this you will need  
then into the constant region  
enter  
The norm of the required event

let's assume that the docking means  
should be realized let's assume

and the G Control Standard  
i.e. what in your Perception is the Norm  
for the docking to occur

i.e. it should be  
the telemetry system is working normally  
for example, there is no connection between meteorites , etc. , yes

in this case you must  
examine this picture visually  
look back in time  
within the framework of this determinant

when you look you will see  
what if we have index K  
look how they intersect

for example, I specifically recorded this entry this way  
that as soon as we are in this index  
add a constant  
for example, with three-level indexing, yes

i.e. in fact we are saying  
that each level of Consciousness  
we can consider  
as a nested level of a higher superstructure

and then it will work out  
that in this case the index K  
he walked like a fourth level

here after the index K there is a constant

and if we consider  
it's like the fourth index already  
in the form of a determinant of the matrix itself

then we get  
the same generalized function G  
but which works within the system

means that we can work  
inside let's assume in the internal control area  
practically working only  
with external signs of this control

to put it simply  
if you have in Perception  
something there in the form of Thinking  
in the form of information objects  
then you can control any system  
which is outside this area

if we consider the inner region  
like any external system

i.e. changing the structure of the meanings of Consciousness  
we can achieve control over any system

and it turns out that it is enough therefore  
have what you have  
at the level of Perception  
but at the same time gain control over any system in principle  
renaming any internal system  
as an element of an external system

i.e. depending on that  
what is your goal in the control add-on  
that's how you get control  
for example in this batch management level

So this is the level that I described  
in the form of a certain formal mechanism  
and a plus that has the status of real management

i.e. putting control there  
you get real control

i.e. you can do it in a similar way  
get for example multipackage level

as a thought  
This will be your homework

although I of course reflected the components  
actually multi-package level  
i.e. we can abstract  
and receive nested systems

but I'm interested  
what exactly from the autonomous unit  
as an independent work  
try to find technology  
multi-package control level  
in private applied problems  
which can stand in front of the rescuer  
or just even in ordinary private life

so, i.e. one of the properties of the package control level  
this is access to the system, let's say control at any point

let's assume if in order to do management  
in an intensive system  
let's assume there are some possible disasters there

then this is a special task  
which is naturally manifested quite significantly  
in the general information system

if you are solving a private problem there

on which, it would seem, a possible catastrophe does not depend, for example

then the batch control level  
gives access to these tasks as well

this means, for example, tasks related to any characteristics  
such as, let's say, the characteristics of some future events  
which are not catastrophic

i.e. in fact it is a forecasting system  
which must be implemented in any case means

and the next task  
you will record this somewhere  
is the translation of the batch control system

for the management of any private  
uncharacteristic or characteristic events

this is for your own reflection

certification occurs in this way  
that you write your specific thoughts for example  
or you are already writing a report on real management  
and then I do it based on your report  
certification

considering that this technology  
it's about mastering the Salvation system  
and it is transmitted as a conditional  
i.e. symbolic or verbal level  
and unconditional

then you must pass the certification in any case

therefore, as a rule, after submitting the report  
if for example I think that something needs to be added  
then I'll add some techniques  
but you will pass the certification in this course in any case

's why maybe someone a little earlier, someone a little later  
but I think you will get about the same

's why in this practice  
there is another principle

what about the Salvation system  
technologies of Salvation  
must be transferable  
either instantly or necessarily

i.e. and this third level  
as homework  
it will actually look like this

then it will be necessary to prove it at the level of Thinking  
or at the level of formal presentation it means  
why are you anyway  
must master this material to the level of that Norm  
which is necessary for the performance of the act of Salvation

in this case, you need to touch on the characteristics of your connections  
i.e. in the general information system

for example, the Earth did not explode a second later  
were you involved in this plan in any way?  
i.e. connect with your level of information  
where did you participate  
and why this system of knowledge  
necessarily transferable unconditionally  
i.e. either instantly or conditionally  
but definitely

so in this case, in this formal expression  
I would say it almost symbolically  
I have finished this part of the lecture

Additionally, you will need  
as homework again

construct a function B from A and  
B from A and again from A

i.e. you just take and at the level of Consciousness  
it is advisable not to describe this function  
here it is in formal form

put two dots  
Well, basically you already have them

and since here A, for example, is from B

then when you write B from A and B from A and from A  
at the level of Consciousness what will you perceive

i.e. I need  
so that you receive at the level of Perception  
any particular optical element

What  
in this case  
if we assume you are just concentrating  
on these functions  
you see either this letter as it looks

if you write like this  
what changes <sup>yes</sup>  
in relation to this point in your Perception

see how the optics change  
<sup>how</sup> does the symbolism change  
maybe it will just be a light form etc.

i.e. look at how it is in this case  
the management system is changing

so in this case  
the formal view that I painted  
he will now be developed in a certain way  
at the level of verbal technologies simply

this part of the lecture  
she defines  
how can you  
using your Consciousness  
bring about the management of private areas

and in this way  
so that the private domain can be decisive  
and through the private area  
you can get control of the global system

in fact, we are talking about that  
to get

unified access  
to the global governance system

including  
through a particular value of some system

in order for this task to be clear  
in terms of in terms of adjectives  
and could be solved, <sup>for example,</sup> from a technological point of view  
already which go according to the type of reflection

I can put it something like this

if you have <sup>for example</sup> the task of catching fish

somewhere <sup>there</sup> on the sea or on the ocean  
and this task implies  
that in order to catch a certain amount of fish  
you need to have, <sup>for example,</sup> networks and similar systems  
in order to catch this fish

but when we set a task in our Consciousness

and how can we influence, <sup>for example,</sup> that  
so that in this environment, <sup>for example,</sup> marine  
there were no environmentally problematic emissions  
let's assume there was no nuclear explosion

then we can as an intermediate object  
examine the fish  
just fish that <sup>may not have gotten into the net</sup>  
and in general even be located in any other place  
but we know that fish swims in water, <sup>for example</sup>

then the only clarification  
that it should be, <sup>for example,</sup> marine, <sup>yes</sup>  
for structuring Consciousness

so when <sup>for example</sup> you take  
control point  
and concentrate on some object of information

this object may have generalized characteristics  
which connect  
or conditionally, <sup>well,</sup> how is this clear to everyone  
either unconditionally  
two or more objects <sup>yes</sup>  
or an infinite number of objects

i.e. if we are in Consciousness  
we record that fish are swimming in this area  
then it is clear that she, <sup>for example,</sup> was not caught  
but theoretically a ship could catch it <sup>yes</sup>  
the next structure of Consciousness

but at the same time  
some nuclear reactor nearby exploded  
because there are fish swimming <sup>there, for example</sup>  
and we structure this constant  
in the generalized control domain

what does it mean that it is not destroyed, not infected, etc.

those. actually a technique  
which I now told you in words  
it is based on that  
what you should find in the structure of Consciousness  
those elements  
Of course I brought fish as a general element

which can connect  
or conditional  
either direct  
or even in an associative way  
any objects of information

and through these objects of information  
you must take control

so this principle is very important from that point of view  
what you can see here very specifically  
that once you can find control  
through any information object

then naturally you will in any case  
achieve control  
at all levels of information

i.e. in the entire field of information

so when we talk about that  
what is management for your Consciousness  
we are talking first of all about that  
so you can invest  
special level of meaning and control  
into one or another object of information

for example, when I concentrate on fish  
as if on an optical element  
which in Perception simply means fish

in fact, I laid it down to prevent it  
for example nuclear destruction yes  
there is a nuclear explosion  
or that there might be a ship floating somewhere nearby

but which was also not destroyed by a nuclear explosion

i.e. it turns out that I have already introduced the third level of the Norm

and this is the level of normalization and regulation  
which could be from anywhere  
I'm looking at the table let's say  
and I invest in the system  
again, like batch management  
when in each development structure  
I put a standardized meaning

in fact, if you look at it  
I have a method of digital objectification  
which allows to identify  
these are these information-geometric optical forms  
which I am talking about

there you can see how Consciousness develops  
once you have done this installation  
on the standardization of related elements

i.e. Consciousness is arranged this way  
what if you enter let's say a certain element of the Norm  
in management  
then you can develop this Norm

but if you, for example, develop it in this way  
then it's quite simple to understand here  
that once you find  
means the level of infinite reproduction of the Norm  
according to your purpose  
then you achieve it anyway  
Rescue Management

and for this you need the first option  
or to increase and develop so much  
structure of regulation

in simple terms it's like thinking  
means or on understanding the communication processes

it means to develop the Norm in this way  
to get control, for example, at the desired point

but at the same time it is necessary to use, for example, elements of vision  
i.e. you must know exactly  
what do you see correctly

so here is the exact knowledge of that  
what are you developing correctly  
standardization of the control process  
is that you must  
in the process of developing the normalization of the situation  
find phases of stability  
or I will call it , let's say, the points of stationary regions  
your Perception

so you will write down the next part of the lecture  
it's called  
points of stationary areas of your Perception

from the point of view of Perception  
points of stationary areas of Perception  
these are elements of the same information object  
which we call Perception

i.e. the points are stationary  
if you take and look  
again with a superstructure with a higher one, as it were  
or more hierarchically arranged  
to view the area means

then you see that in Perception  
point of stationary region  
this is actually a specific area  
having a specific form  
but within the form of Perception

let's say I have a table surface there  
and I for example call it Perception or reaction area yes  
reagent area of the table  
in relation to, for example, a microphone or a telephone

then for the reaction region  
or there for Perception  
what is the stationary region here

so firstly a stationary region  
is a communication element

at least with these three objects of information

therefore the point of stationary Perception  
this is the point of connections manifested in your Consciousness

It's better to write this down

it means the point of stationary Perception  
this is the point of connections manifested in your Consciousness

hence the element of Consciousness  
in this case it is defined

as soon as we enter at least one area  
which we will call, for example, a stationary region  
we define the element of Consciousness  
i.e. what is more general, etc.

i.e. if we consider  
stationary point of Consciousness  
which contains Perception  
we can find the structure of the Spirit  
which defines this area of Perception

or we can find the Soul level  
which records or reproduces  
this point  
precisely the stationary point of Perception

i.e. we can generally speaking  
and knowing some well-known ideas of people  
or for example creating your own ideas  
which may be completely different or completely new

we can build  
means description on a multi-level plan  
those processes that occur at this stationary point

and then we get that all Perception  
we can reproduce  
from the point of view of analyzing only one point

i.e. I give it to you specifically  
this technique of knowledge development  
in your Consciousness

that as soon as you start doing it  
some fixed area  
then inside the region  
and in the development of meaningful relationships in this area  
you can get the whole knowledge base  
including knowledge of Salvation

and it turns out that in reality  
when we talk  
about such principles of Consciousness  
as remote control

these are also principles  
which allow you to actually register  
so firstly your impulses are targeted  
and including from target impulses  
get the control you need

in your specific management task  
this is actually a theoretical and practical part  
which I told about  
it should only come down to this  
to get control at a real level

i.e. everything that I told in this lecture  
must be used  
to specific always Salvation technologies

i.e. to think about them abstractly  
this means simply creating new structures of Thinking

I'm interested in real management  
i.e. real access to Reality

and for example, having looked at what is in these three volumes  
(The Practice of Management The Path of Salvation)  
which includes technology, substance management, medicine  
and as some generalized areas of events

we need to look at each specific case  
how i used that knowledge system  
which you received in this management course  
using your Consciousness

and where these technologies were demonstrated  
i.e. what is the manifestation of these technologies

It should be taken into account that these facts  
specially selected for this purpose  
so that when you look at the fact  
you can get technology even from facts

and at the same time you can get technology  
of course my own for example  
but I am interested in this when considering this three-volume work  
application of the technology that I told you about

although as I explained this is only one of the levels of management  
however, look at the appendix to these facts  
and give if possible  
either a short or a full explanation  
try to do it within the same month if possible

i.e. you can choose any one of the facts  
and give application to the technique that I told about  
in the form of a symbolic representation  
or in the form of, for example, a lecture, i.e., a verbal part

i.e. I will still be interested in the analogy  
simply put, how I did it  
from the point of view of this approach that you have now received

so that's the whole lecture course  
which consists of management means  
taking into account, so to speak, orthodox mathematics  
and for example certain new mathematical methods  
which are still explainable in orthodox mathematics

and plus concrete practice  
which was used here  
in my personal practice for example  
plus a general analysis of specific systems  
irrational rational  
that's what I tried to present here in this course

now as well as a continuation  
you can say this course  
there will be a part that will still come in the form of questions

i.e. I'm interested now  
if possible, if of course you have one  
but if possible ask a question

so now it's your part  
depending on how you ask these questions  
I will give you answers  
this will be real work

the course of lectures also consists of this  
that your events can be seen ahead  
i.e. I see specific events  
there, for example, each of you has  
therefore a generalized level is created  
the question is put there  
and you understand it in a certain way  
each of you understands any question in your own way, meaning or answer

and moreover, your task is to spread this knowledge

i.e. into this system of questions and answers  
a knowledge transfer system is being implemented  
at a level that is still understandable

you need to be able to convey it in ordinary words  
and when there is little time  
or when there is a lot of time  
you must be able to convey the system of knowledge on Salvation  
either instantly quickly conditional unconditional way  
either there with mathematics or drawings there  
in principle, there are works of art if needed

i.e. you must be able to transmit the Salvation technology  
with almost any instrument or telepathy

so here you go now  
start asking questions  
from this point of view, be sure to monitor  
what will happen, for example, as a result

let's maybe start with you then yes

QUESTION:

*Track the result in advance*  
*i.e. look at the specific result right now*  
*track or track there in a week*

G. GRABOVOI:

The result should be monitored in this way  
here is the information center

where does it say what is needed  
have Eternal reproduction of life  
this is the information center  
as if some center of a conditional or specific sphere  
from which the information comes  
She returns there as if in an exchange circle

you must control  
real security of the entire system

so we are not talking about that  
that you are learning something somewhere now  
or write a report for example only after a month  
maybe in three years you will have certain  
completely new methodologies  
what will they have to do with you specifically?  
which will give an opportunity to a new direction there  
synthesis of different sciences, for example

so try to perceive it here  
it is global after all  
from the point of view of solving the main problems, yes  
Eternal reproduction of life

and then we are ideal  
and concretely and realistically  
we solve a particular problem

i.e. we really save

so this question needs to be looked at more deeply  
because I described only part  
I pass on you pass on  
but in reality why are we transmitting

in order to actually provide a control system  
according to the knowledge of Salvation  
and not, for example, declaratively and not through propaganda

i.e. this is where the task lies  
what are you or if you want to promote  
but if you don't want to  
you can control directly

if we consider, let's say, my practice  
then I use both methods

so here is your task

Always monitor the norm  
in the Eternal reproduction of life

it is actually a certain level of vision  
when you see for example there is a planet all realities  
and you see that everything is going well

this is your own diagnostic status

and in relation to this  
in general, it's already quite simple, everything is being built  
what you need to know now  
what to focus on  
what should you lay in your future  
how to build your own development system, etc.

QUESTION :

*How to see these spaces for yourself  
how to outline them to know what to put where and where to look*

G. GRABOVOI:

From the point of view of seeing space  
it is necessary first of all to determine  
that in spatial understanding  
for you is management  
i.e. from the management point of view  
how do you see the control space

for example YOU can  
if there is a fire or illness there

the source of the fire imagine it or see it as if from above  
then it will turn out that you have  
control space is a real picture  
for example, a forest fire

and in order to determine already  
access space for example  
you can basically just use a local image  
and simply draw the contours for yourself  
contours of information over this fire

if it is a disease  
just consider , for example, the same person  
or just a specific organ

and consider the system of connections  
in the form of certain silvery threads or something  
and place it where you already track  
that as soon as you intervene and bring it back to normal  
you get the Control Norm

it can be in space  
Well, there could be up to five meters around you in a radius  
basically in front of you

then in front of you and in front of your face

and if you have the same fire  
as if in the form of some kind of picture  
for example, if you take a specific thing and look at it

then the information contour that is above  
this is a line  
well, let's say an information line  
but you can see them  
in the form of streams of light or segments of some kind

your task is simply to take first  
through Consciousness to designate access  
it's actually from your body for example  
so to speak ray may emanate  
which connects and gives control  
i.e. the fire stops

but you have to  
or call and get the fire stopped  
or so that there is no disease  
or use then the formal apparatus that I gave  
and make concentration  
having laid the meaning of the absence of control

if you use control  
in a sort of regressive phase, i.e. absence of fire

and then it turns out that the formal apparatus  
this is the space that you just see yes  
from a piece of paper for example or remember  
if you remember then it is located anywhere

in other words, if you remember these formulas  
and use them as active parameters

then you get control already as if outside of space  
the flat version that you perceive  
as if from a board  
and that's all

and it is enough for one point, which I was talking about  
speak , to put pressure  
those. enter the meaning of the Norm there  
then it turns out that this is space  
for you, strictly speaking, it actually exists  
only as a goal

for example, a fire, you don't need to see it  
you just need to put the meaning of the Norm into the formula  
or make your own formula then, as it were  
then we can derive the spatial domain

so from the totality of this  
you can just build a control space  
where you just have access to the control point

then you just find yourself in space  
point  
just one point  
which for example is the norm

and as soon as you make access there with Consciousness  
you really do Norma

This is the principle of impulse control  
which is used, for example, in treatment often  
there in the ultra-fast diseases  
some crisis conditions  
or so that there are no fast-moving situations  
like there was an instant nuclear explosion, etc.

that's why  
actually control space  
of course it can be varied  
what I said is like some of the parameters  
which you can perceive

but in reality you can of course describe  
based on my imagination  
basically any space  
which you like for example  
that you understand or feel

in your Thinking  
and use it to control

actually the number of methods  
naturally it is not limited

what I'm saying is already completely  
proven control system  
and gave a concrete result

but of course you can develop your system  
this is as an answer

QUESTION:

*Whereby  
we must exercise control  
through your physical body or in some other way*

G. GRABOVOI:

So clear  
i.e. by means of which it is necessary to carry out control

so in this case the answer is quite simple

because in this case I give control  
only on the logic of Thinking

that's the same way you think  
in fact, on any aspect  
that you encounter in your life  
you also manage

i.e. you only control that  
that you are the logic of Thinking among other things  
reproduce  
in the form of special optical images of visual images  
which are located at the required points in physical space

then there is a possibility of control  
at points that do not apply  
for example to the concepts of physical space  
these are the so-called conceptual areas of management

i.e. you are always understanding understanding understanding something  
come to the point where the Norm arises there

but it's not  
this is the space of Thinking  
which is not located in a specific physical region

although if you want you will see this area  
let's assume that we are near ourselves  
or it is infinitely distant

so it's about what you use  
or control in the physical domain  
when you translate the system of Thinking  
to the level of certain symbols of specific images  
or even just light optical elements  
and manage according to that principle  
which I described

There is of course a principle  
which I just said about him again  
this is the principle of understanding  
how should management take place

you probably noticed  
that sometimes for something to be positive  
internally you somehow tense up as if

but if you looked at how you strain yourself  
then you would see certain optical lines  
some kind of light there

if you think about the meaning of these lines  
you will then get the same  
already have their own management system

therefore management  
it doesn't necessarily happen, well, let's say , with the body, with some part of the  
body  
and since in information they use such a concept as Consciousness  
there is a Soul, there is a Spirit and other concepts  
which, for example, do not relate specifically to the body  
and you as a manager  
you should work with these concepts too

i.e. in fact you owe for the basic level  
from which you can build  
management  
take any existing concept  
for example grass galaxy occultism strict science mathematics  
anything you like

any information  
may be a reference point for you  
for management

and what do you control?

if there is such a thing as Soul  
which, for example, in the theory of reincarnation  
it does not depend on the body

then it turns out that you control , well in this theory yes  
within the limits of this theory  
autonomous region  
you control not the body, for example, but on the basis of the Soul

and therefore in this case

we are talking about Consciousness  
which means which is a consequence of the Soul  
it is a more rigid system

and on the basis of Consciousness we can control  
collective Reality  
for example, external elements of Reality  
some internal levels  
well which ones you want  
including feelings such as emotions

and based on Consciousness  
you reproduce  
including one's own physical body  
or some element of the World

it turns out that your body is a consequence  
and it really is so  
i.e. you can restore yourself  
restore another person  
a consequence of a certain form of reason in fact  
which is well in a more general sense  
Consciousness of your personality

and therefore we can say  
that you will achieve in any case  
correct management for Salvation  
and you will be indestructible

if the control position  
was built on functions, for example, only the body  
or on the functions of only one concept of some  
or there are many concepts  
then you would still have instability in a given system  
dependence on some static systems

in this case i am talking  
that on the basis of Consciousness  
you can play whatever you want

and therefore read in the context of this question  
for example, by looking or studying carefully

these facts are in the three-volume work

in general, try to highlight this line  
where the structure of Consciousness itself determined Reality  
for example in materialization  
where for example in materialization  
I used a reference point  
and what is she like  
was it connected at all, for example, with the physical body  
first of all  
in any case with the physical body  
as with the manifestation of the fixed phase  
from the point of view of the Eternal reproduction of life  
everything must be connected

but it is connected like this  
that you must build the physical body yourself

i.e. it turns out that the reference point  
of course your Consciousness must appear

so in the context of what was explained  
again I will share certain parameters  
to clarify this picture  
in a special way , so to speak

means spatial control  
within the space around your physical body  
but at the same time Consciousness works

if you see certain elements coming out  
and so it is there  
in the form of light elements from the physical body

then this needs to be considered from the point of view of that  
how do you build your own body  
how do you build your body anyway

and the second is the control space  
means that it is not connected, for example, with physical space  
but you may wonder  
and this space in physical space to find

i.e. when you think you don't always see

or you can even be there, for example, in very distant galaxies  
in your Thinking, basically anywhere

but where is this space  
is it in physical space  
and how it intersects with this space  
space of Thinking

at the level of crystal optics  
I found transition levels  
you can also find through Consciousness naturally

but then generally speaking, having designated some area  
what is this control space  
this is another principle

and a more important principle  
what you should on the basis of Consciousness  
build any system  
including the system you want to manage  
and the system from which you want to control  
and even that system, so to speak Well, basically from which  
you can build whatever you want  
in your Consciousness

when you develop it on a creative level, for example  
as we say the Creator laid the foundation for the development of the World  
then you don't have any problems there

i.e. you can create such systems  
and see their real control capability

so from the point of view of this question  
I think that's enough

QUESTION:

*This is how I understood it*  
*There are many management methods*  
*to solve a specific problem* yes  
*so how can a person find a method for himself?*  
*how to find it*

G. GRABOVOI:

To find your own method  
First of all, we need to consider  
methodology already known

i.e. here I presented it to you  
and factuality and formal apparatus  
which is used, for example, partly formally  
orthodox mathematics

and there is a device  
which is easily proven by orthodox mathematics

i.e. I have now presented to you only what is being proven  
for example, there is tensor analysis and other methods defined there  
for example, a function of a complex variable  
mainly the theory of generalized functions

I can prove the formal apparatus that I presented

i.e. he explains, let's say, certain principles  
for all people who know, for example, mathematics  
and they can make their decisions based on this  
i.e. create control logical areas

so, but in essence the control that I am giving now  
and invested in this device  
it is straight  
i.e. using the device you can control  
and use, for example, only this device  
in some situations

but firstly by analogy  
you can naturally create your own device  
so working practically

i.e. changing some functional signs  
changing the form even there is not necessary  
For example, this could be a matrix system

if you want don't take the determinant  
and take the trace of the matrix  
and do the control through the matrix trace there, etc.

this means and therefore it is not even necessary to take the matrix  
take for example a function of a complex variable  
and see what you can

and as I explained if through physical models

but in principle under management conditions  
to create a device if so in essence  
instant control for any situation  
you should of course do this constantly  
on a spiritual level

i.e. translate any situation into projection  
or is she already  
generally speaking it has been translated  
but why do i say "translate"  
because I'm kind of reintroducing what's there  
to the optical level of fixation  
I would say so

and develop this level, well let's say so  
by lever system  
not allowing events to develop means  
into negative status

as if holding such a status on an internal spiritual level  
that you can re-reconstruct all of this  
even if the event happened in the past

i.e. and for this you will develop in practice  
I call them my own  
flow-light lines  
or lines of contact with an event at the information level

and depending on that  
how do you contact and how does it happen  
for example, the rearrangement of control levels  
and how does it actually happen

and you will be able to track it very quickly  
then you will see it right away  
that this impulse led him to control

if control is delayed

look why  
because it is the task of the Soul  
there are more often complex tasks  
which along the way you will constantly solve them

therefore , the individual principle of management  
first of all, it is still the use of , for example, in this case  
here is my basic level tested

then based on the analysis  
this is a creation  
or logical  
or symbolic  
or means the optical level of its own  
be implemented in practice

and at the same time you can create  
generally speaking any level  
not necessarily optical

i.e. if your Perception allows you to control  
for example, just even with musical notes yes  
having distributed a certain melody  
you can get a control impulse  
it makes no difference to you in principle  
what is more accessible to you

then you will get it

the main thing is to monitor and develop  
here is the status, here is a kind of foreknowledge of a future event

and the status of foreknowledge as I explained  
you can have access to it  
in any case, what's the matter

i.e. you can know  
how the event might develop  
and therefore, changing the principle of leverage, in fact, he

i.e. somewhere emphasizing Consciousness  
at some points in space  
in front of you, for example , or somewhere in the distance  
you get the control you need

naturally it must be taken into account  
that there is a Macroenvironment harmony of the external environment  
it is such that many phenomena are in principle normal  
is no need to manage them <sup>there</sup>  
Well, the tree grows, let it grow

and <sup>therefore</sup> so that it would not be destroyed  
so that within this structure  
the events you needed happened  
then we need to highlight it

from a generalized level  
just learn  
identify systems that need to be influenced

Well, imagine a big stone there on the mountain  
to move it, a small lever might be enough, <sup>yes</sup>  
and he starts moving

it's about the same

you after some time  
when you start using it constantly whenever possible  
you will immediately come to the conclusion that you already know how to do it  
and then you will continue to build the same structures  
which will be needed for specific management

and after some time and maybe often right away  
it is a certain spiritual state

and it looks like there is a different level <sup>there</sup>  
there is a level there, <sup>let's say,</sup> of some kind of <sup>direct</sup> viewing  
everything is visible, so you can see that it's normal, <sup>for example</sup>  
the corresponding spiritual state <sup>yes</sup>  
if you change something somewhere  
you can change it along the border of the region

if you are starting to work with new systems  
then you set more general tasks <sup>there</sup>  
then you have different constructions, <sup>yes</sup>

time passes, situations change, others  
more global design

then the management can be like this  
as management as mastering a new system, so to speak  
sometimes it takes some time

i.e. then you will change maybe and as if technologies  
if you want

but often the technology can be exactly the same

for example, on this concept  
optical control  
when you can see through optics  
actually how to manage an event

This is the simplest  
but he can solve almost all issues  
if you develop it

that's why individualization  
Of course it is diverse  
and you just need to make sure to use the basic level

i.e. what has already been done  
what can be done  
and here's how to do it  
that you can eat all this  
in my level of practice and theory and instrumental implementation

and now your task  
just having the tool already  
well and adapt or develop

so actually this is the answer

QUESTION:

*It's like when we were talking like this  
spheres are sort of highlighted*

*for example, we imagined ourselves as an inner sphere*

*and in order to manage*

*this is how to combine this is how Consciousness needs to be brought out  
to the management level*

*and in this case, here is the inner sphere*

*i.e. here, on the one hand, Consciousness needs to be brought out*

*as if to the control level  
and on the other hand, imagine yourself  
in the form of this inner sphere  
and how to combine all this in this case*

G. GRABOVOI:

I understand

here the principle is first of all that  
everything is created within your Consciousness

i.e. for example when you are solving a problem  
then you decide accordingly on the terms of such  
what kind of goals do you achieve?

so to clarify and give

Well, a more general interpretation of this answer  
I'll just give you a specific example

for example, managing the same so that the same does not happen  
well, like a fire, yes or the one I was talking about  
or, for example, considering such a phrase  
"so that there is no fire" which I spoke about yes  
but I didn't say the word "that"  
or so that  
and it would be even better if there was no fire at all  
which would be problematic  
or in general which would be harmful for example

and then

and then I go further into the word "fire"  
it is considered that this is some kind of uncontrollable situation

i.e. fire for something there for heating, that's understandable

and so, for example, I came to the conclusion that  
as a first approximation  
I built some kind of one form of information  
second third etc. fourth

and how can I designate the process in my Consciousness  
then that's how it will be

here is the canonized system that I gave  
and which yes you considered it correctly  
in terms of the task of actually entering the external sphere

here are the technologies that happen inside Consciousness  
if we answer this question more deeply

then the part you indicated  
in the control area  
it is generally speaking no different from that  
how control information is actually structured

realistic from a practical point of view  
this is what you achieve  
through certain structures of Consciousness

therefore redefine the whole Reality  
in order to manage  
symbolically possible  
you must have the right entry points

and yet it all depends on that  
how do you put it in Consciousness  
and since you work only on Consciousness  
the answer is of course clear to you <sup>yes</sup>  
it is understandable at a certain spiritual level

but <sup>what is</sup> important here is that  
how technologically  
combine  
with Reality of two orders

firstly with you on the physical level of your events <sup>yes</sup>  
and in order for this to be achieved, management  
what do you want

then it turns out  
that the tasks are, <sup>for example,</sup> in the same area  
where you are focused in the inner area  
as <sup>an example of</sup> one of the projections <sup>after all</sup>  
this is still one of the projections of your Consciousness

means to bring to a projective control system  
where do you have, say, that projection base ?  
in the system of general Consciousness  
where is your ideology it is realized by Salvation

i.e. it turns out that the task is like a transition  
communication task output task  
although you build everything within the limits of Consciousness  
it is still technologically preserved

i.e. you asked a question that says that  
what is possible from the inner area  
let's assume that we move to the outer one without crossing the borders

for example, I conducted experiments on teleportation there at Moscow State University  
from a closed vacuum system  
it was possible to output the element

although the walls are rigid, physical, for example

the same in Consciousness

and you can, knowing the possibilities of Consciousness  
then already on such a spiritual understanding  
means to build any structures  
including associative

i.e. if you don't translate  
through the reconstruction system  
some on a physical level  
do not translate the element for some reason  
not because you can't do it there, for example  
as a rule in Consciousness you can naturally do everything  
the main thing is time for you  
because it is your own Consciousness

maybe you think  
that this element is not effective there  
translate some systems from one to another

and then you can use  
just an associative meaning  
of this connection  
and it is he who can be the manager

although you may not even show it

i.e. for example you drew the design of a sphere  
which was just asked about

and the control part  
she can do nothing at all, even verbally or even in Perception  
not to be expressed  
but she can manage

so when you want to know later  
what worked in the management  
Of course you can do an analysis and see  
that the association was quite strong here, for example  
which you can then review  
that she was in your Consciousness

i.e., for example , you are considering management  
from your goal, for example, to a real task in this way  
that you are considering some piece of information

which you perceive, for example, in the form of optics  
or some images

and the real connection is in the information  
Of course it is diverse  
and much does not need to be included in the Perception system, for example

because you are only interested in that  
what do you think controls  
but nevertheless external elements can naturally  
be managers

here in principle it's pretty much the same  
how is the management area generally built  
how is it different from just the area of Thinking

the fact that, firstly, in many ways  
the area is being assigned in the right ideology yes  
for you the closest

secondly, that this area is still  
it really exists  
because it allows you to really  
transform space

this is an element of the development of the whole world

when from the system of general connections

some next element appears

i.e. there are certain fundamental Laws of information  
or development of information  
which includes the development of the physical world , for example

so when you work  
necessary to find generalized areas

i.e. in principle you can do an analysis  
what are the generalized areas  
even in abstract Thinking in associative Thinking  
were managers

you can do it if you need to

those. you can find  
what was in control at that moment  
but that's up to you

so the main thing is of course that  
that you work only within the limits of Consciousness

and naturally within the limits of Consciousness  
you can build any structure  
including connections, but they are not necessarily direct  
one does not necessarily follow from the other physically, etc.

QUESTION:

*I have a question like this  
we've always talked about the fact that you can control it  
as if what we see, yes, as I understood correctly  
let's say we don't touch on the topic  
or it just so happened that it shouldn't be there  
is it possible to control somehow from a distance without seeing the object here  
and let's assume that I'm self-medicating myself*

G. GRABOVOI:

Well, I'll explain now  
the thing is that I said certain things about management  
here in this same lecture course  
for managing objects with unknown characteristics

i.e. principles of object management  
and they are there in mathematics

you just  
and in the lecture course

you just need to listen to this part specifically  
what are you  
in particular your question it says that  
what if you don't translate into the optical visible spectrum  
then you can of course control these objects

then you'll just have to  
build your own system  
if at the level of Perception already

then we must build our own system  
which would allow you to know for sure  
what will you have as a result  
what you want from the object  
which you do not translate into visible Perception

i.e. in this case you need it anyway  
introduce a system of control or a Standard for the object

Well, the first Norm is like the current Norm.  
which you have formed as if a priori it exists  
and that suits you

then you don't need to translate it into a really visible system  
and the maximum number of elements  
it does not need to be shown at the level of Perception  
in the form of some kind of optics

but let's assume in a number of elements  
some Norm may arise  
which one exactly do you want to receive?  
but you don't want to visualize the object

then you should just manage the Norm element  
and at the same time the element of the Norm  
it can be removed from you  
or you don't want to fix it, for example

you know somehow on a Spiritual level, for example?  
that it should be like this  
but don't make a construction of events

i.e. you don't visualize

so your question is still in many ways  
this is already a kind of continuation of what I gave in lectures  
in many ways it means that it gives the opportunity to see such a picture

how to move from visual  
i.e. the perceived level of control  
to the Spiritual Realm

and in the Spiritual realm  
there, in principle, you do not consider any images  
if you don't need it  
Spiritual control is simply a state of the Spirit.

of course you can see from the side  
it's like some kind of light stream there  
which for example is in the area of your body  
depending on what your spiritual state is  
the stream has different levels of color, for example

but nevertheless, this is certainly not just a change of flows  
because this is already concentration  
which contains many visible images

from the point of view of the Soul, this is generally  
we can consider the World as a creation  
continuous creation  
in fact, all elements of Reality

then we get control  
it's just that here you can still reflect an important part of knowledge  
management of information objects that have not yet been created

then of course you don't transfer them to Perception  
because they haven't been created anywhere yet, for example

but nevertheless you need to manage them

and that's why it turns out  
what from the point of view of this answer  
the technologies are still the same  
still the same

you need an object that you don't see, don't register, yes  
somehow reproduce  
on any boundary region  
and define it by functions of the boundary region

for example, here is a table, for example, I can say  
what I concentrated my attention on here  
and for example on ten nuclear reactors  
there was no explosion

but I don't need to see ten reactors for that  
and somehow reproduce them at all  
I just took the physical area  
looked at her  
and that's all

i.e. I reassigned and reconstructed the Perception system  
and that's all

but this is of course one of the examples  
which you can use if you want yes  
but then you become dependent on a physical object  
or from some level of transition

I think that either you do it  
fix the Norm in the future  
or you make some kind of transitional intermediate level  
as I showed

this can also be done on information  
not necessarily a physical table

you simply declare what is in your Perception  
there are ten digits, for example  
the fifth digit is the norm

and keep an eye on her  
if, for example, she begins to move in Perception  
so somewhere it's not normal where you're aiming for example

but what exactly it is doesn't matter anymore  
you may not see the object itself  
and that means that this form of governance of course exists

for health to restore health

any techniques are acceptable  
because health is just rationing

This is a normal physiological norm.  
and the Norm of Events

therefore everything that related to the management of Salvation  
naturally relates to health restoration  
and if you for example want to manage

there is just a small nuance  
in health management  
those processes that you do not see  
are some diseases there  
but you don't need them, you don't need to see them at all

i.e. if you suddenly record information about a certain disease  
it's like a health problem

since your question can be turned around like this  
what to consider from that point of view  
which is precisely the goal of health management  
is not to record information about the disease anywhere yes

it turns out to be a different technique  
prevent negative event status

and then you have to do the reverse task, so to speak  
see or understand the Norm  
i.e. you can understand but not record

even in the projective part  
you need to know exactly what's going on  
in an area for example that you can't see  
you still have to perceive it  
and functionally see the scope of its control  
at least somewhere  
or on the symbolic row as I explained  
or in the projective part

then this will be the answer to your question

so now there will be such a training  
after all these questions

then you will create  
certain mental constructs  
and so these mental constructs  
to implement

and then I will treat you accordingly  
so in the field of management  
to set up in a certain way, so to speak

so that's why we'll start with you again  
take a particular problem  
for example, liquid purification

it's just that in front of you there is water, this is specific water  
go into the structure of real water  
here somewhere on the floor  
and take on the task of water purification  
i.e. bringing it to the Norm  
so that there are no suspended particles there  
according to the same control scheme  
do this task  
then we'll sort it out

while you do it, I'll watch over you

Well I think that's enough you know now I  
again from the point of view of all external relations  
as if a common understanding  
I am now introducing this kind of external surveillance

from my point of view what have you done  
so you took , well , first of all , for example, from the tap  
some real segment of water  
stretched it out for example in the form of information  
and then converted into information  
and placed it in the area of a small sphere

and this little sphere  
it is located inside the big one  
began to move there in such a certain way  
and enter information Norms

i.e., to put it simply, you worked in the center of a large sphere  
how did you perceive it yourself

what were you doing mentally

ANSWER:

*Well, that means I mentally took water and tried*

G. GRABOVOI:

let's do it sequentially

I also said that you took water and real

then they distributed

what did you do next?

ANSWER:

*Well, I think I put this water in a small sphere.*

*i.e. information about it*

G. GRABOVOI:

oh yeah yeah into a small sphere

Where was she at your place?

ANSWER:

*it completely filled her small sphere*

G. GRABOVOI:

no, I understand

the small sphere where it was located

ANSWER:

*in the center*

G. GRABRVOY:

in the center after all, so I understood correctly

i.e. it is obtained in the second iteration

you already work more precisely like this

because i said the same

that you worked in the center of the sphere

and certain elements of the function of this sphere  
did you clean it?

well, they kind of brought it back to normal, yeah

in the sphere itself

I considered it as, well, yes

as a kind of reflected element inside a small sphere

and you rationed water in this way

then do it

Well, there are basically no comments for you here  
because you did it technologically accurately  
as I told

you took it and translated it into information  
and entered into the center of the sphere

the main thing here is  
that this Macrosphere  
When did you cross the border?  
you did not violate its integrity  
i.e. technologically you made the right element

big cube on top  
inside the cone is smaller it is inside the cube  
and inside the cone there is another small cube  
where is the water purified

your task  
just throw it over, it's already cleaned

throw it back to the taps

when you transfer  
see how the geometry of each figure changes

so you know I'm still at the intermediate iteration  
Now I'm stopping you again because it's necessary

so this is how I saw the process  
from the point of view of general connections

you are a small cube that is inside  
it started to kind of pulsate in you  
and to turn into something more like a spheroidal object , etc.  
like this process is spheroidal spheroidality there  
changing and crossing different lines  
in all figures  
he became so complex  
and as if a generalized area began to appear  
so, well, which in some places reflected, for example , the base of the cone  
pieces of some figures

but you don't have any hard figures  
everything has become dynamic  
How did you perceive this process?  
how we did it ourselves, to put it simply, mentally

ANSWER:

*The cube has transformed  
into an absolutely smooth body, volumetric, without kinks, without bends*

G. GRABOVOI:

well the inner cube yes  
transformed into a completely smooth body

ANSWER:

*yes, in such a free form without breaks and without edges.*

G. GRABOVOI:

Absolutely smooth body  
I see how at first he began to sort of bend towards the border  
then something like a spheroidal thing started to appear

ANSWER:

*Without breaks in the sense of without edges*

G. GRABOVOI:

well yes yes yes well then it looks more like a sphere  
spheroidality

you correctly considered the principle in the second iteration  
what you got is actually a change in the contours of the inner cube  
it really is a process  
already as if a reverse transfer of water

this can be explained on the same principle  
here are the internal and external areas

means that the internal area is realized  
need to change the boundaries of the outer region  
you as from the ideological point of view of today's lecture  
did the right thing

why can everyone be taught

because

Well, it's the Salvation technologies  
from the point of view of general connections

because there is  
completely rigid forms of functioning  
in the form of specific Laws even of the work of Consciousness  
which are the same for everyone

and now you are almost at the second iteration  
to this level

let's go now  
so now there will be such an option

so imagine an infinite plane  
of course imagine an infinite plane  
like any infinity  
Quite conditionally it is possible  
it seems so yes

but nevertheless  
you need to imagine an infinite plane  
which on the one hand  
has a kind of bright optical glow  
well, it kind of emits white light, for example

and emits it locally  
you kind of see it from the outside  
and it's not that white light covers everything, but white is just light  
and that's all

on the other hand, well let it be blue  
it means blue color

so now the first question  
how did you see the blue color  
look at him carefully  
then just tune in to this blue color on the other side  
while constructing an infinite plane

and look here is another task

on the light surface  
the ball is running

in this ball

well, such a small spherical one  
for example, with a diameter of two centimeters  
on the white part of the infinite plane  
the ball is running  
and there is information about that  
that the water is absolutely clean everywhere  
everywhere and always

just as there may be information about that  
that it seems like everywhere and always the norm

basically it's almost the same thing

Well, let's start with water after all  
and here is this white ball  
it means he should get to the side, that means that  
where is the blue area  
where is the blue color

so first of all, watch this system  
it may not necessarily be in front of you  
and anywhere in general

then watch carefully, don't even imagine  
namely, observe, feel  
how the ball goes to the surface where the blue color is  
as if on another surface of an infinite plane

it would be desirable to see it of course  
how does it not break this surface  
i.e. he ends up there  
according to some Laws of its movement

so let's do it this way first  
I'll tell you my point of view now  
you will tell me later

so the first thing is when I said about the first question  
see the blue color there  
so in my opinion you saw it as if locally  
in the form of a certain strip at first  
well, for example, something like the projection of a cone there

on the inner surface

i.e. how would you see it first  
local area of blue color

then it began to spread  
Here's what you saw for yourself

ANSWER:

*I saw, well, sort of so to speak, not everywhere is blue  
but only in a certain place*

G. GRABOVOI:

*Well yes, locally it is correct*

then the second when you then again  
what i see from my point of view  
why do i say that i am considering it

Well, I have such a concept  
I have clairvoyance, for example  
I see how Thinking happens  
from the point of view of general connections  
or from a private point of view it is possible  
in this case I'm interested in general connections

and so as I see it, what you did  
for example, from the point of view of this ball again , or maybe a sphere  
where is the ecologically clean water

it is important to understand that  
what is the difference in the level of clairvoyance of the manager there  
from the level, for example, just Thinking

that if we take into account the maximum number of connections  
that's what happens and what arises  
This is precisely the concept that is called clairvoyance

it is possible to develop targeted clairvoyance  
i.e. for example what you specifically need  
in chemistry, for example, in the physics of micro-bodies, etc.

so now you will have a task  
the first such element  
take a small sphere where there is ecologically clean water

and in general the Norm of all events in general  
exactly Norma

to open this sphere in such a way  
so that firstly the water doesn't spill  
didn't spill

and secondly, so that from this open sphere  
from the boundaries of this sphere, as it were  
get some so to speak planes  
some stable systems for example  
that could hold this water

and this water, generally speaking, is without a specific form

the task is basically of this type  
you must therefore imagine  
well, some kind of plant, let's say yes  
which could actually personify this form, something like this

so you do it now then

basically you know you have it  
this information

so what happened to you now  
when I said you did it almost immediately  
so that's why when I looked at it  
Actually, there was such a process here  
when it is revealed this is my point of view  
then you will say yours

this sphere opens up  
Well, water is in the same static form.  
i.e. she doesn't move anywhere where she was

this means that some such parts of planes appear at first  
which as if downwards they increase in size and recline  
so in principle it looks like that  
like, well, what do they call it, lotus or lily, yes  
it all coincided for you, yes, in my opinion

yes, but that's basically it  
you found it right, you found this form right away

so here too there is one important principle in this whole technique  
that certain forms that we see in Reality  
this means that they are actually a certain Norm

a certain Norm  
from the point of view of, for example, your Perception and more general systems

i.e. we see the world in its manifested form  
as a certain system  
including management standardization

i.e. it is enough for you to lay down this form  
you will have in principle the Norm of water for example  
even if it's there, well, it doesn't seem very clean to you, for example

Fine  
then in principle the only thing that can be added there is  
as a second task  
this is for independent management

take this form and fold it again  
and instead of such rather conditional events you will get yes  
all the seemingly normal events of the World  
inside this little sphere  
and in plus minus infinity

in this case your task will be  
see where there is more glow  
in the outer sphere or in the inner

do it do it what difference does it make to you  
this is information  
all events of the world are normal plus minus infinity

especially since you've already done almost half of it  
while I was speaking  
how would you do it almost simultaneously  
and now look how I looked at your work

so first your outer surface started to glow more  
then as if from your point of view  
it's somewhere on the right that only one part is saturated  
more white color

as if the shades began to equalize a little

yes, gradually, I guess  
so yes you saw  
yes, in general I think it's right

technologically correct  
just use this element for that  
to output, for example, the packet level, yes  
I give information  
you can pack it in a bag  
infinite amount of information  
what difference does it make to you  
yes you take and assign an infinite amount of information  
it's not really difficult  
in the form of one level and that's it

let's move on  
then your task now will be that  
what was cleaned, transformed, and arranged  
and brought back to normal

so all of this taken together  
as if within the framework of what we are doing now  
To connect all this information means  
with all the information of Reality in general with all

and at the same time connect in this way  
so that it would be similar  
well, something resembling an hourglass

kind of put information in one direction  
i.e., to put it simply, you capture the good  
what we have done here now  
invest

this information is sort of filtered  
through one part of the hourglass  
and arises in another part

so now it's your task  
look from the other side of the hourglass  
how do you see this information  
look  
in the form of what

so from my point of view

At first you saw these kind of glowing dots  
then sometimes like rays and at the end dots  
like a projection-section  
You saw it yourself

ANSWER:

*Well, I imagined this hourglass  
then like the bottom  
when they said to look from below  
that's when information yes information when that's when  
in the form of I don't know I imagine in the form of bright ones I don't know how*

G. GRABOVOI:

well, points

ANSWER:

*yes, most likely the dots*

G. GRABOVOI:

Yes, okay.

then the second element will be like this  
fold this clock in the center in the center and fold the clock itself  
and get the image  
everyone present in this room

so the image is well understandable  
it's not like in the photo  
you need to get an image  
in one area of information  
for example at one point

Well, the principle is similar to holography, for example.  
but it's not exactly holography  
because according to your question  
you shouldn't perceive  
you asked questions  
how to manage but not perceive

get image  
you must understand that there is an image of all  
but don't look at us like in the photo

then you should get this point

now the function of this point  
in this area, let's even say so

from my point of view  
first of all, look, observe them, observe them  
rolled up this hourglass and got it

you know that all our images are there  
including all the people there, the movie camera, everything that is here even

and this point starts to sort of  
develop in a certain way

when i just said like "all of us" yeah  
you perceived, for example, those who are sitting among the listeners

ANSWER:  
*Visually*

G. GRABOVOI:  
yeah, well I saw you scattered visual images  
they began to move there chaotically in a certain way  
then I said get it means so  
so that you can get control without registration yes  
The norm for everyone

then it started to kind of pulsate in you  
as if they were expanding  
well, it's like there's a feeling of pressure

i.e. well, it began to increase, to put it simply, in size  
and some have some yellowish, well, some shades

How did you see it?  
did you see that the dot doesn't seem to fit  
and it starts to grow

ANSWER:  
*yes, it seems to make small vibrations*

G. GRABOVOI  
yes, there are fluctuations

ANSWER:

*At first there was a very small dot  
then it seemed to acquire some kind of geometric forms*

G. GRABOVOI:

yes yes yes and it began to expand  
vibrations began to appear correctly

so and when I already said  
not only there we will say who are present here people for example  
and also all external objects  
you have such white shades  
as if more fixed form yes

ANSWER:

*Yes*

G. GRABOVOI

everything is correct, yes correct  
Fine

so basically that's what it looks like  
already almost on the second iteration

you come to management  
through the system of general connections

's why first of all the symbolic apparatus that I give  
plus lecture  
he set you up for this  
all previous time

secondly, it means you have already received  
in fact, this management is already called  
what you did  
you did it really in the control system

if I do it now  
I did such things in Novosibirsk, I did such works  
take water measurements  
they will be much cleaner, for example, than without this control, etc.

so naturally as I showed  
also collective management  
for example, management without registration of the object

this is as you have just noticed  
these are certain changes  
as if changing the shape of the perceived object  
and that's all

you don't need to see images  
but you make the Norma as if for everyone

i.e. in this way you actually showed it practically  
which is already on the second iteration  
you showed me  
Login to management  
it means natural and moreover real control

so since it mattered  
and the lecture part  
and for example symbolically  
and your own analysis  
and plus the fact that all future events  
were nevertheless laid down by knowledge  
including, for example, in this lecture course  
and in your current management

you will have to in the future  
just for example like develop management  
it's technologically advanced there

for example, technologically similar  
as a practice  
within a month, for example

and further  
since the goal is, in fact, Reality  
according to information  
and control of physical processes

just when you write a report  
if possible, write a link

first type of report  
what control system did you use  
for example from my lecture course

and the second option  
what control system

It's even better if you use your own  
for example yes create  
It's better to do this on a separate sheet of paper

but you can only use mine  
in fact, this is equivalent  
you just have to choose  
create your own technology  
then determine if possible  
where does it grow from the point of view of my technology  
means finding the connecting points

if you want just refer  
to specific parts of my lectures, formulas, etc.

those. as a reporting base  
will be mandatory identification  
using the technique that I gave you  
including which now  
at the moment of real practice

and the part that will be yours  
then where does it come from from my point of view  
because in the general system of general connections  
you just need to find the projective component

and find by analogy with what  
or in contact with what area of my information  
you build your own

at the same time you can  
make an independent individual area  
but the contact system  
by the system of general connections  
always exists

i.e. even from this point of view

so this is where I end this lecture course  
you will have enough in the future, a lot more literature  
I will leave it here at the department

as I explained, in addition to the report, you can ask questions  
because in principle for certification  
there was a requirement to show practice

you have already shown it even now

but in addition you still need to practice  
and show, for example, that from your point of view  
where did you get control  
in your understanding  
informative or at the level of physical events

and then I think about it  
what if we are talking about some answers, for example to questions  
Sometimes you know I just take questions  
sometimes I even respond telepathically

i.e. the answers seem to come to you by themselves  
and then you, for example, start to see them

If necessary, I sometimes give answers to questions  
in the form of an audio recording

in any case always through the department here  
can you connect with me

well, for example, even in absentia or in person  
when I have lectures or seminars there

so that's enough for now
