

GRIGORY GRABOVOY
Structuring of Consciousness
**Technology of structuring Consciousness when you can restructure
from current time information
information from the past**
(12)
20.09.2001

Good afternoon again
in this lecture
according to my system of Salvation and harmonious development
I show the technology of structuring Consciousness

when you can
restructure
from current time information
information from the past

i.e. the principle of this level
according to the Macrosalvation system is that
what if in the current time
you get the coordinates
about a possible global catastrophe or problem
then you can change the design
even in that case
if on the structure of the current Reality
but in remote areas
Well, this problem may be starting

in this regard, based on this scheme
you highlight
current time segment
what is the current time in your Consciousness
highlight the structure of past events
as a connecting medium
current time area
with the area means the beginning of some problem

i.e. the area means future problems
this area
also reproducible means in Consciousness

but at the same time it means it is not located
as if in constant contact
with current time element

i.e. all events of the current time
stand out
as a moving dynamic system

this is done consciously and is done by an effort of will

if you consider , for example, the attributes of will
what is for example will in Salvation technology
then will is a skill often
impart dynamic characteristics
for example static environments

if we assume you are looking at the current Reality
as for Reality let's say so
harmoniously built type
then by an effort of will
if some problem is brewing
this Reality can be protected
giving it to her
super speed characteristics
or dynamic characteristics

then it means the projection in this Reality is like this
that Reality still doesn't change

and in this case only the event can change
which could be a possible problem

therefore it means Well as if
in the ramifications of this ideology
based on the principle of optical control level

you can control from the current time
on static objects of Reality

i.e. static objects of Reality
it's like a system that means it accepts
Well like a reverse wave
from
your impulse of Consciousness

and this wave will stabilize
and the events that are problematic are not realized

and here is an element of the past tense
here it plays a role
well, a kind of substrate
what is all this happening on

i.e. the scheme that I described
I described it quite quickly now in words
several times if possible
for example, when reading or listening to a lecture
look at this diagram

and her well as if modeled specifically
to understand the logical meaning of this diagram

then there is a logical meaning
I don't reveal it fully here
because I'm interested
Spiritual knowledge
elements of the past tense

i.e. as past tense
can be functional

i.e. sampling of the time parameter
from the already past Reality, so to speak

for example a second has passed now
then all the elements of Reality
including this table
they have the characteristics of the past tense

where is this time

Means Well for example on the same table yes
so where does archiving take place
there is no such thing as past tense

this is as an independent work
so you will have to find these coordinates

and that's why I didn't go into detail here
rescue access principle

as if from the point of view of disclosure
in algorithmic or, let's say, logical schemes

so i said it quickly

second level
which concerns the level of self-regeneration

at the level of natural
or controlled harmonious development
is that if we consider
level of natural development

then the management consists
Well as if in static at rest
in condition means Norms so to speak Yes
then it turns out
natural development

controlled development i.e. management of the Norm yes
control coming from your Norm

and managed development
requiring some kind of correction
this is the activation principle
well, some special areas
which are not related to the concept
let's assume the existing or current Norm

in this regard, the principle of management means
subject to its own self-regeneration
in this case it is that
that you are in the elements of the past tense
put it well so to speak, unique acceptor points
or points of special concentration
which are functioning
as a special access area
when the regeneration process is underway

i.e. the regeneration process is already underway
on a spiritual basis
that you have these points
which they created themselves

pay attention

on the Spiritual component, so to speak, of this management
what do you do yourself
and at the same time you do the same
in the elements of the past tense
i.e. where access in principle can be minimal
and this design is quite stable
and this is also the source of self-regeneration
under conditions of harmony we say
external or internal development

when you consider such a position
as internal development

then the position of the past tense for example Yes
in the internal environment

let's say if we take an organism
is comparable to that
what if some processes are happening
well, in some part of the circulatory system, let's say
then these processes
through certain known
by the speed of blood flow, for example
time reaches some point

blood particle
who was there five minutes ago
it is approximately for a certain period of time
reaches some place in the body

when you look at
what does this situation mean
for Consciousness means for Perception
it means in the complex and in the whole organism

then you will see
what is the principle of particle regeneration
it is often associated with speed

sometimes this is the only connection
with the speed of reaction of Consciousness
for development
structures within the body

i.e. I am talking about the concept
as if the internal content yes

if in a physical sense
this is what is inside the body

if we speak
about the internal content of the Spiritual system
then in relation to the functions of the body
if you take it and do it according to the similarity scheme
then we can also define
units of development of the Spiritual structure
in what time will she be in what place

i.e. inside
Spiritual system of development
concept
I use the word inside again
there are elements as if well, of a legislative nature

i.e. although it can be considered
Spirit as an infinite system
well, by analogy with the development of the organism
we can say
that there are special points inside
means the development of a special area of development
which are reflected in your Consciousness

if you are looking for example
where are these reflection points
you regenerate yourself in conditions
external and internal harmonious development

i.e. the search for these points leads to the fact that
that you at the same time
and manage
and recover at the same time

and you control it
in a phase of, as it were, external internal harmony

here are these points if you look at them
the area of, say, a person's forehead
at the level of Perception
then they are visible
how the elements there are singly glowing

and when you bring Consciousness closer
i.e. I show the diagnostics of these points

when you bring Consciousness closer
for example to the physical part of the forehead
then the points are infinitely removed
become even smaller

then they leave
in a size that is minus size
i.e. there is such a property of Consciousness
diagnose systems
which are not manifested
as if in its positive characteristics

i.e. we can perceive light
for example, light by analogy with ordinary light
through Consciousness
and consider that this is management
means coming from the presence of, for example, the mass of light

but if we ask ourselves a logically simple question
and what is the opposite of light mass

then we get
infinitely receding in Consciousness
a plot of land in principle of the same world
we are talking about the Light

and here is the dynamics of the movement
this is a characteristic of this process

dynamics perceived
namely the Spiritual basis
in this regard we can build management
on the Spiritual content of logical concepts

if you for example Well, you dive into the sea
and there are , let's say, some corals, there is plankton
then we can say
something that is outside the corals
so this is an environment where you can, for example, yes to swim

and in connection with this it means I 'll draw this analogy
you can mean as if Well, comparing the corals
let's assume with the logic of the process

you can around the logical part of the process

define functions
and as if means
development of the Spiritual component
and moreover coordinates

if you visually see corals
then you can immediately tell where the water flows yes
i.e. Spiritual content how to develop

having for example such an analogy
you can do the management
through the structure of one's own Consciousness
based on border areas

means border areas
well, which are located
between the outer surface of the coral
and as if the first particle of liquid

this is where Consciousness meets
with spiritually oriented content
management process

this area always raises a question in Consciousness
Well, if you ask yourself the question
we have a particle of liquid
and for example it comes into contact with coral

then this is how much detail you need to go into
this particle of liquid yes
in the field of logical understanding
to find some intermediate boundary

from known laws of physics, for example
there is evidence that atoms exist, let's assume Yes
intermolecular systems
but it is no longer a liquid as such

i.e., deepening the analysis
so it translates
into the system of the next level of known knowledge

by analogy in such management
you can do exactly the same

i.e. you can receive
a qualitatively different level of management
it means having the characteristics of known knowledge

"known" I call even knowledge in principle
which you can
as if artificially or independently so to speak Yes
create
artificially means
artificially reproduced image
or can you put some sense into it in principle?
art of creation

and not artificially in terms of
let's assume that it is applicable to the usual logic of Consciousness yes

and therefore if we consider
these two positions
in verbal interpretation
then you will see the manifestation of the Soul
where is the word that has a purpose in implementation
manifests itself as a property of the Soul

so these are the points where this Reality occurs
these are control points from the Soul
that come directly from your Soul
but at the same time they are visualized
as at the level of spiritual perception
so at the level of logical Consciousness
and at that level
where in Spiritual Perception
exists
logic of Consciousness

while listening to this lecture
be more careful
here in relation to that part
where does spiritual perception mean

where is the part of Spiritual Perception
is considered as the logic of Consciousness

as an independent work
I'll have to find this element
in the system of one's own Spiritual control

and you will see
what is control stability

as per logical phase
and according to the phase of presence of your Soul
in the control element

Means well, those phrases that I am putting now
if possible, analyze them
in terms of generalization
or branches
to various control areas

third control
when you control from your Consciousness
any level
means distant or close Reality

i.e. direct control
from the system of one's own Consciousness
is built in this way
that direct control can be
including
and management of past events

at this moment it matters
who is nearby
and how it is formulated around, for example , this person
Wednesday

and for example Well, this person may be
this is basically some kind of situation

as in this situation
the element of Salvation is being formed

and depending on this element
you can give answers

this is a system of behavioral development of the control system
i.e. if you have any conversations, any conversations in general, yes
including everyday conversations of a domestic nature
which do not contain a supporting structure
logically identified element, for example , Macrosalvation

then in the direct access element

you can lay this structure
as by analogy with the system well let's say corals and water

it means the phrases that you say for example
by the purpose of logical control
this peculiar system
again, let's say, conditionally corals Yes
in such a very much more schematic approximation

then the Spiritual Directorate for Macrosalvation
this is the whole superstructure
which exists beyond words
or outside there for example, tasks and conversations

then it turns out
that conducting a conversation in this case
it is a series of logical lines, so to speak
revealed by light

and that means what concerns the Spiritual part of management
what is around

and in accordance with this
if you increase
Spiritual status of management
then, for example, in an infinite way
you get control over the same events
first of all, which are you talking about?
and the same ones that are yours
there are strategic plans there yes For example
in the following days or in the following time

based on a special concentration only
this Spiritual component
Well as if a kind of rarefied environment
which is outside the logic of the conversation

but is located as if from the outside

In practice this element is very useful
what if you are, for example, having some kind of conversation
then the outer region
is necessarily thematically governing
and is the manager of the Macrosalvation system
and at the same time provides access

in any event of Reality

straight from your Consciousness

straight from your Consciousness
in this case it means that
that the image is an element of your Consciousness
and the event is located
in the same place

as an independent work
find by analogy
which I just mentioned
why does the term "directly" imply
in this case it's actually the same thing

so it could be
what in response to this question
there are many different answers
Please select an answer if possible
which one well for example, you liked it there better

and when this answer is given that you like
you will start to unpack it
you should get
as a system for diagnosing accuracy in work
the same parameter you started with

i.e. any answer
if you start to delve into its semantic connotation
well, by various methods of research
through the systems of structures of one's own Consciousness
should be the same
what was the original object

well, let's say the canonical meaning of this
and these actions
consists in the fact that
that the Creator created Reality
at his level well let's say there is no special control there
or the level of complete freedom
which is also a method
as if special controlled development
according to the Creator's goals by the way

this is complete freedom, this is controlled development
according to the purposes of the Creator
about the True Eternal Reality

and here the world develops like this
what you say in the infinite future
ideally or in the current future
if we consider the infinite
as in the system of Consciousness
as an element yes a single element
revealed by Consciousness

everything strives for the image and likeness of the Creator

here the element is basically similar
and in this regard, analysis
from the point of view of comparison with the work of the Creator
does not raise a question

another question is that as I said
infinite element of development
may be finite in the elements of Consciousness

because in Consciousness you can simply ask the question
and where is the end point for example?
let's assume the first impulse is infinite
and identify, for example, a local element of infinity

here in Consciousness a principle arises
in the work of Consciousness
what situations can be allowed
in principle, infinitely many

and it turns out
that's when the assumption
or when the work is well on your mental logical level
comes to the supposition means to management

then here is the control element
during the production part that I just mentioned

i.e. if I say
what for example is infinity well in this case
this is some kind of segment in my Perception
light segment
it is finite

then the element that matches
development of infinity

i.e. I can, generally speaking, in a logical representation
simply means nothing Well how can I let it go or organize it?
element of Consciousness
or to lower the element of Consciousness to
for example, the development of infinity

this element of Consciousness
let's assume some point A
starts well For example there to move away infinitely

but I can at any time
take and for example assign point B
which is always ahead
but the designated point B is near me
in this case
she doesn't move
although for example the first one is always deleted

i.e. in the structure of Consciousness there are levels of access
where are the moving systems
such as the receding point A
means completely definable from, for example, one point B

what i say
this is the Law of the Development of Consciousness

and point B is quite convenient
She is standing next to me
and in general it doesn't seem to present any problems

but activation of point B
always allows you to control point A

and here is the intermediate area
which is basically
content as spiritual
and logical
and the presence of the Soul

this is the intermediate area
in this case if you do
parallelization in this case

control systems
it is definitely stable
according to the Macrosalvation system
and access to any element of Reality

this formula, let's say, is verbal
if possible you can
if there is ^{such} a temporary opportunity
write it down on paper and look at it
from the point of view of the so-called
weight characteristics of Consciousness

i.e. giving the properties of weight
elements of Consciousness
consider where the maximum concentration of weight is
or let's say the maximum density of Consciousness
in this case
this is not the maximum concentration of weight

maximum concentration of elements
Well as if the weight elements of Consciousness
this is another characteristic for Consciousness

density of matter
it is a physical characteristic
this is what exists for example yes physical Reality

in Consciousness the elements are different
here be more attentive and look
how does the difference happen

first element of distinction
is based on an axiomatic principle
What
Consciousness is a structure
including organizing Reality

therefore the processes that occur
for example in physical Reality
may be secondary

but the processes occurring in physical Reality
can interact with Consciousness
then the circle with an infinite number of connections
closes

and here we find the point
what does everything that happens ^{mean} in the world
is already infinitely manifested

i.e., just reasoning
well, roughly as I just said
it turns out
each element is infinitely reproducible

then we get
point of infinite control
in any element of Reality

and the point of infinite control ^{yes}
any element
this is also a necessary event

therefore you choose
just two dots
first point
this is the point of infinite control
this element of Reality
i.e. an infinite number of ways

and the second point is that
what is target management
and as I explained in the preliminary diagram

first point
then you activate it with Consciousness
and you give it , so to speak, some kind of super-possible
very fast infinite speed

and the second one is next to you
and the event is realized

in this case it is realized at the point
which I spoke about at the same point
where the management takes place

This is the question I asked
that the control point exists there
where the event takes place

if you start developing a system

from the point of view of organization

Well as if a logical shell of this control

in this case

management can be mainly

in the Spirit phase

and the phase of control from the Soul

where the Spirit is manifested as a mental structure

i.e. the structure coming from the Soul

look where the Spirit is manifested

as a logical level structure

i.e. where you have, for example, logic developed in the Spirit

when you listen to a lecture

and for example, you set these tasks and analyze them

you get control

which comes from that

that logic is a shell

which is formed by the Spirit

but at the same time you can

to form in a controlled manner

from the same logical phase

logically it looks like this

that you have a task to make management there

using the Spiritual Phase

which has super fast speeds

and the task is known

for example, you need to cure a person

or make sure there is no explosion there

let's assume a nuclear reactor or a nuclear bomb yes

then you have this logical phase

which exists

as an element of external Reality

i.e. the existence of a certain bomb, let's assume a nuclear one

and the second

that the control logic is such

what do you think i.e. you use thought

as if of high concentration

if we talk about that

and how does management take place in the Spiritual phase?
and how about this
the logic of the following control is built
then you can make the transition to the next plan

what is control logic
which is the next element of development
this is practically the development of the Spiritual phase

i.e. well, imagine , let's say , consider, imagine
what is in Consciousness
can be modeled by representation

i.e. elements of the development of Consciousness
can often be modulated
and generally speaking, develop in the same way
how does it develop , let's say
element of the supposed physical Reality

and if we consider
well, some kind of orchard there
and in one place there is a fruit tree
in another in this orchard
Well, there is a tree that is not fruit-bearing, for example. Yes
let's assume pine

then we have
for the purpose of maximum information volume
let's assume there is an orchard there is land there
where is the orchard
we have a single tree
let's assume well there is a pine tree

and it turns out
what can we consider
orchard
as outgoing
from the point of Consciousness
which is related to pine
as a certain individual characteristic

and we can count
that there is such a big fruit garden
But there is a pine tree inside
how to go from a larger volume to a smaller one yes

look at this development of Consciousness

you get it means

in the comparative development of Consciousness in analysis

you get availability

very large quantities

well, peculiar logical spheres

i.e. this is how on a Spiritual basis

logic is being built

when you analyze these two positions

you see the development

a large number of logical spheres

in the optical range

they are from the area of organizing such a logical phase

start to grow

well, like a kind of balloon

fly out

into the space of Spiritual control already

while forming in the form of a thought

i.e. in this case I am talking about

how the next thought is formed

behind the first level of management

so in connection with this

you do it right now in the current tense

such management

in front of me there in radius for example

if we consider that the center of the sphere is near me

is located within a radius of two meters there is a sphere

and here in front of me there is the border of this sphere

then you need to be on the border of this sphere

like on some screen

build two types of control

i.e. the first type is logical

the second type is logical which arose from that

what do you know how your logic comes about

and build logic on a Spiritual basis

i.e. the first type you build a logical phase

because you think logically

another type
when you build logic
organized by your Spirit

and on this surface of the sphere
build management of those events
which you consider necessary

and I'll just watch

management objective
obtain from the combination of two processes
endless vertical light column

as we say, a kind of approximation
or the development of these flying out logical spheres

i.e. the goal is this
what you should get on optics
vertical endless column of light
in terms of optics of perception

if the management causes a lot of thoughts
try to highlight one thought
and work with one

having made such control and having received
well, let's say a high concentration of Consciousness is enough
at the level of knowledge
in this area in front of me
build a model of the organization of the human body
from systems of intercellular interactions, for example

i.e. we take two cells
the first cell exists i.e. you perceive it
the second cell you build it
i.e. well as if you were performing an act of management
in relation to , for example , the second cell

and from the interaction of these two cells
build a human body
there is yours or who are you treating
this needs to be done quickly
there in a matter of seconds

when did you build the human body
that means the vertical level of a person
i.e. here is the vertical and light size
it should be more clearly manifested

i.e. the vertical component
mainly in relation to the left shoulder, for example
it should be more clearly manifested

so when you well like a person
it doesn't have to be
exactly there as in the anatomical atlas yes

and here is a vertical light column
expand as much as possible
so that self-organization of organs can begin
inside this person

i.e. there the heart, for example, creates the liver
liver, let's say kidneys, etc.
mutual and duplicative system
organism reservations

now get that point inside the body
who organizes all this
but inside the physical tissue of the organism

i.e. one point
where is there information about all these processes

human organization point

now this point
clothe in a logical phase of knowledge
here I say, for example, clothe it in a logical phase of cognition
then you just need to take it and clothe it

take the element of Consciousness
which is called the logical phase
and how do you wrap this image, yes

then now find the Spiritual content
as reflected from the logical phase
inside the liver for example

where is the Spirit inside the liver

how does he build a liver like
look at the development process
as if it were a kind of crystal

i.e. this crystal develops yes
and you get a liver
but the liver comes from the Spirit

if you
from your Spirit

if you go higher
then there is an element of the presence and development of the Creator yes
His ideologies

if you go towards the walls of the body
you will get the same liver
from the logical phase

so now you
it doesn't have to be just the liver
could be any organ

in principle, any event can happen
if you work in relation
to this built man
in the outer region
i.e. in the external
in relation to skin, for example , yes
i.e. not inside a person

then you can work with any event in the same way
and also build

and that's what happens in this case
that the event is an external system
but the control is inside
i.e. movement there development
some organs and systems
on a spiritual basis
you build external events

the logical transition is very clear

i.e. any internal processes

cause change
in the external space of event Reality
ordinary Reality
i.e. physical as well

so as homework
according to a similar scheme
look how it happens
control from external, so to speak, objects

if you know the existence of objects
as if their way of organizing
what is their point at all
depending on that
what do you know how do you organize yourself

so as soon as you know
how do you organize yourself
you see that in each object
there is a meaning, a governing meaning

then the management consists of
that you are entering the information object
and you see well so let's say the deep meaning
there is such a concept as, for example, a thing in itself
yes or substance True substance there
for example, in the semantic understanding of some object

let's assume there is a sphere in front of me
where did you do the management
also as an object of control

go to the management that is not registered
namely, for example, on the physical plane

i.e. work with control systems
which are designed, let's assume, as thought forms
as elements of Consciousness control
and you will see that the approach is in principle
he is the same type

i.e. a task and a homework task and a current one
Now you have to understand this right away

i.e. enter the control like this
that this must be understood immediately

made the management and you understand
that the current task is
mandatory finding of unification

i.e. one and the same Spiritual or mental
control impulse
which leads to the management of any system

for example you can do management
so yes , information content
let's say it with our thoughts
which lead to the following management
in Reality

and you can do it
control of physical Reality
let's assume there to heal or change the event
prevent a nuclear reactor from exploding

but at the same time you have
control impulse
must be the same

this technique means it is like this
What
impulse of primary organization
he is alone

i.e. the Creator once, for example, created everything
and in principle this must be understood
that this technology also needs to be studied
and know how it's done

therefore the impulse is uniform
which gives rise to general or universal governance

so in accordance with this so to speak task
you will need to do it now
Well, it's a kind of training
which consists of
what you will have to model in Consciousness yes
or so to say, modify the elements of Consciousness
or give the next element to development
To one's own consciousness
develop Consciousness in the current time
Thus

what would be the impulse I spoke about
was in the form of a sphere in front of me
there at a distance of the same two meters
modeled by you
let it be an impulse
Well there which looks like a sphere
For example there are 20 centimeters in diameter

and you must have this impulse
make it unified
from which all control comes

the impulse is formed
it's best if it's inside you
it was formed
you took it out
they put it here and showed it
you can basically put it as a tool, for example Yes
back to the same point

but at the same time make the management
on my own tasks again
according to the tasks of the hall, for example
or for general creative purposes

do the management right in front of me

I'll watch

when you do such management
look where the sphere of others is

The thing is
that I specifically gave one point yes
some more general point
but this is the development of precise clairvoyance training

i.e. targeted spatial clairvoyance
including
manager

look where the sphere of others is
and put the sphere well it would be better if it were nearby
and don't try as if Well, should I push it out ?
another sphere

and naturally
the space begins to fill up
because there are many spheres in front of me
but the task is within the limits of one sphere
and you can't fill the whole room with balloons

solve the problem
what kind of clairvoyance should there be then, as if introverted
I said that there is light in the minus region yes

build introvert
i.e. clairvoyance that goes as if inside
in the same area
Well how would you create just suppose there is the next dimension yes
some and that's all
but in the same area

so when you do it
Be sure to learn in parallel
here is a multifactorial mechanism
what is introverted
i.e. independent of external space
clairvoyance
has direct control access
or infinite access

i.e. for that
to overcome space
For example yes on Consciousness
it is not necessary to overcome it logically
there accelerating there For example Yes
Spiritually or by willpower
but it is enough to create space
as if in minus space
and control from it

which is much easier
because there is no need to move anywhere

and this task is about the same
i.e. as soon as you receive
compaction in space
in mutual spheres
you begin to feel them, see them
and you see that the sphere begins

as if rubbing against each other
then you just do minus area
and enter it there let's say let's call it a measurement yes

and in general, as a dimension
it is visible on Consciousness
in the fourth dimension yes
measure with a meter and a centimeter
take a logical roulette
put a centimeter there

It's better if you have one like this
Well like a cloth type tape measure

put it in one space
then to another
there the centimeter is lengthened

in Consciousness it is visible
that space is lengthened

this way you can grow
For example there bones to lengthen or growth
or in general how to grow organs
and as if the arrangement of cells
between cells
to make standardized
if they are very compacted

i.e. this is among other things
mechanism of tumor resorption

so if you for example do management
by human organization
i.e. we are talking about resurrection in this case

that resurrection
in this case it looks like
as a manifestation
introverted level of control
those. minus space
in the field of ordinary, i.e. saturated optics

where the optical element is
very concentrated
for example, there is physical matter

manifested for example there is water there
and some other microelements

i.e. it turns out to be the Law of creation of man
just for nothing
this is the level of knowledge in management
organization of ordinary matter

where the management is such
that everything is organized by the person's own Soul
originally created by the Creator

so the level is from the Creator
it is always obligatory

in any management try to find
level from the Creator
as a primary-next level

when you enter the control logic
if possible, if you think so
or you are going at a very high speed
look
how does the creator work
i.e. how does the Creator do it in this case

and here to watch
as the Creator does
i.e. as he teaches , he does it
i.e. shows means teaches
to see is to learn
in this case

then you just need to create a system
Well as if mutual values or something
in the development of your management trajectory

Well, it 's a peculiar path
you will see the weight characteristics

that at such a concentration
you need to see the structure of the Creator
how does it do
you can put this on the logic diagram

This can be diagnosed first

secondly, you can just look ahead
and see that at high concentration
contact with the Creator
must be assumed Well there in the logical phase yes

at such and such a concentration of light
could be more precise
or similar to a cone-shaped level
and there is a level
according to the hourglass

then contact with the Creator
mostly happens on the Spiritual level

direct contact

and when you type
for example levels well there is no direct contact so to speak Yes
you have an image of the Creator
which is in charge
this is that world
which you control

i.e. as far as possible
find the presence of the Soul
in the logical phase of control
where you think
there is also a Soul
and the Spirit
and the Creator is present

and then it will be clear
how thought is organized
for the next one

i.e. I just showed you
mechanism of organization
well, including during this lecture
next thought yes
based on Spiritual Administration

and here's an idea
which is organized after the following
it might be a different technology

because in space
it may be a more remote structure

how to approach the idea
which is organized
for example let's say that the second thought is yes
third or tenth there

then this is what you need to figure out yourself
and if possible see
that understanding and the process of cognition
it is the ability to organize
each subsequent remote object
so much
that understanding by all current objects
well it arises as if by itself

i.e. if you read a newspaper there
and the meaning of the whole newspaper is clear
because you well for example, we saw it on TV, yes
more distant thing
and this material

that glow of what was seen
can be carried simply in the logical phase
light
and then you don't need to read the newspaper
you just looked and got it
Spiritual knowledge

for example from one word to several phrases yes
or one image

the principle of this knowledge
consists in the fact that
what can you build
control cognition system
because you build further and deeper as if Yes
and more expanded and more technologically advanced
than those objects
which, well, which you have to manage

i.e. the principle of stability is that
what are you building around well, it's much better

and here is the light coming
i.e. the glow coming from these objects
it is like this
that it certainly contains all the information
including the object you manage

and then the control lines are like this
what you are not obliged to build
direct control trajectory
it's enough to build
everything that is clear to you around

hence
control an object through your Consciousness
direct control of Consciousness
can build like this
that it is enough to build
any clear control
light up this control
and you will control the object
which may not need to be understood

it follows from this
that all objects can be controlled
even super complex
that means any kind of artificial ones
there are recreated structures
in principle, any design

and therefore management
for example related to direct access
also fits into this logical scheme

once you can control known systems
then it turns out in principle, it is possible to control the entire system yes
the only question is the technological management

i.e. any system
at any time
and in principle asking any question

i.e., for example, I can ask a question
in this system
what do i need to achieve there Means well, Macrosalvation yes
for specific periods of time, for example Yes

I can put the dates here

Of course the question of training arises
i.e. the presence of free will of all people

but in principle this is also possible
as if to place it in the outline of the terms
and the deadlines must be
to be able to prevent, for example
Well there for example, a possible global catastrophe

then I can teach
I don't necessarily need it
often suppose to delve into
into the system of preliminary training of students
in this case

I can build
for example, their areas of management
which are understandable to me

and these areas of management
highlight so much that I can see
that the listeners' experiences have changed
in terms of Macrosalvation

and this person or people who are listening
they will definitely be saved
but having received knowledge in his own way

so or can definitely
just like I say yes to receive

you can also pass on education
to any category of listeners
according to this scheme

i.e. it is enough to construct known structures
means to highlight areas that are understandable to you

in information transmission technology
Well , this may look like this
as a system it is not very complicated
and thus pass on knowledge

here is the scheme

as an independent work
you need to convey the knowledge of today's lecture
what you understood

Means well, the maximum number of listeners, so to speak
straightaway
and then to everyone who will watch videotapes
who will listen to this lecture
as if in an infinite future

teach them all
But on my own behalf
and in that context
how did you understand this lecture now

therefore the principle of obligatory understanding
as I said
the principle is relevant here
mandatory understanding
but understanding for example there in its own way yes

i.e. understanding
shades of understanding are not limited in any way

enough to track
direct control principle

and this principle is the control coordinates
which are mentioned in this lecture but are not mentioned explicitly

highlight implicit functions
about which, well, I didn't say anything explicitly
i.e. what is the target control structure
or the criterion of the Norm or the correctness of management
if there are a lot of control systems

this is such a difficult question
but that means it needs to be answered
in the context of today's lecture

and while working with today's lecture
if possible, identify those structures
which would be very quickly understandable to you
understandable for example

well if you use some analysis yes
or else there let's assume some deep analysis

and with the help of today's lecture
do it this way
so that all all positions
which can thus be considered
they would be the same
by control speed
by design of the control
in terms of quality of management

the point of technology is that
what is often required for Macrosalvation
instantaneous i.e. as if spontaneous
or very fast control

then find some kind of deeper design
there is no time there, yes

and then any design
should be the manager
the same as very complex structures
or some very developed one

and here the same technology helps
highlighting developed structures

This concludes today's lecture.
Now

in the context of today's lecture
I will answer questions
this means that some of them were still formulated
as if on such a physical level
in the form of specific notes

and some questions will be
Well as if questions that I myself model
i.e. I'm watching
questions in the future, for example
and the so-called simulated questions
and the answers to them

i.e. what kind of questions might arise, for example?

in the course of development of a lecture course, for example
not necessarily only in this lecture
maybe in the context of connection with other lectures
or in principle in relation to this lecture

and in connection with this
I mean , first of all, now
In the first part I will answer questions
which were notes well before
and those who are lying here today

for example, one of the questions was like this
how to restore Means
local blood pressure in the leg

there was talk about the right leg
from the point of view of diagnostics there
it means for certain reasons
this means that venous pressure rose
including the arterial blood supply system
and there was a question
like if a person considers the process well for example in yourself
in such a way that he thinks
what *needs to be restored*
according to his so-called diagnostic data
then how to do it Means

from the point of view of today's lecture
Firstly, there is the question of the diagnostic plan

Means Here is the diagnostics
in the primary impulse of Perception
where there is an infinite set of solutions, for example
and the information of this kind that is manifested
that in one local leg the pressure is increased , for example
which sounds quite unusual
let's assume from the point of view of well let's say orthodox diagnostics

although it is natural with thrombus formation
such things happen yes
and they are quite common
but in this case, according to those data
which I have
there they were talking about a different process
associated mainly with activation
Well as if masses of matter

and in a certain place yes for example blood
and is simply connected with a small
very small, physically unnoticeable
level of difference

i.e., by conventional means, let's assume there then with a tonometer
it would be impossible to detect this difference
but the man put the question that way

so here is the answer to this question
is that when the primary diagnosis
perceived by man
Well as if from within oneself

i.e. it turns out
he perceives his own organism

and then the question arises
in general, what does he perceive

that's when the question is put like this
then the first level of iteration
as if by access of Consciousness
it's the brain as a rule yes

it is considered what does the brain mean
processes
Well as if the maximum amount of information
therefore it is
governing body in many ways

second level if you consider
then from the point of view of what is no longer social Consciousness
i.e. not collective Consciousness
in terms of known knowledge

i.e. knowledge about that
that the brain is the control system
this knowledge well as if in many ways orthodox

and this is what it means that the pressure in the right leg is high
this is knowledge of the Spiritual content
this is a different glow

the glow is local in nature

specifically, for example, in the right leg
but at the same time it is located
in an area narrower than the right leg

i.e. at the first impulse of Consciousness
this glow seems to cover the leg
and when you approach
it ends up inside the leg

i.e. diagnostics of the Spiritual component
in the control process
consists in the fact that
that when approaching well how would you attack
like in a movie camera
on the information object

that when approaching the object of information
your area is shrinking

i.e. the area of Perception becomes narrower
actually just a light level
becomes smaller in volume

this speaks to that
what do you perceive on a Spiritual level

therefore Spiritual diagnostics
there is a diagnostic of oneself
but on the Spiritual level

there is , as it were, a logical level
current phase there Reality of the organism
where logic gets its information
about the normalized state
For example yes of all organs

in this regard, logic shows
that there are no problems there
like a normal state
small local fluctuations
increased blood flow
this is natural in principle with a large reserve
is even the norm

but for some reason

there is a task
in the space in front of a person
balance this process

so the reason is that
that when I was talking about that
what if we consider it as a kind of yes
Coral Consciousness
and the Spiritual basis is like air in coral
then the rigid system is the manifested system
harshly manifested
it's there Well for example, the logical phase in Consciousness

and that means that the spiritual is such an amorphous system
like water

then considering the principle of existence of coral yes
Coral grows in water
and Consciousness is also organized
including from the Spiritual system of the logical phase
logical is a system of investigation

then following this logic
space outside of man
outside the physical part of man
creates man among other things

it is clear that the Creator creates man
but that means the Creator is present in space
in front of a person

the logic is this

The spiritual content is as follows
what does Creator mean on the Spiritual part
exists in every element of man
in the infinite level of Spiritual development yes
Here Spiritual status is simple

and when you put all these positions together
you get
level of development of the Soul at the logical phase
into the system where there is an imbalance
Spiritual well identified on Spiritual diagnostics
the state of this right leg

where physical criteria are very insignificant

so following this logic
so it's clear that for a person
the task was set
knowledge of a given local area
how to do a Spiritual Diagnostic
how to balance the system and why

I already showed
certain phases of this process

so that future events
were harmonized

i.e. the element of influence
future controlled event
and even well-managed yes
for example, it hits the right leg

then the event element is linked there
with information legs
imbalance of some event
Well there are extensions in implementation
causes irregularity
albeit at a small level but at a physical level

if we consider this construction in reverse
then you will get that
that the body is formed in such a way
that he reacts to specific events
and many diseases can be because
that this is a unique system
Well as if the body does not differentiate
and here are the future events
they start to change the current system
the current structure of the body

so from the point of view of treatment
in this case the general conclusion is this
that treatment is also that
that you are normalizing the signal from future events
who is coming to you

then you get Norma
firstly, event-driven management

and the Norm for regeneration
i.e. by own restoration

in principle this is related
not only to you personally
and it applies
but also to everyone

i.e. here is the answer
from the point of view of today's lecture
he's basically like that
just look where in this answer
contains the current time phase ^{yes}
phase of the past tense
and where are the acceptor points placed
which form this explanation

this is as an independent work

so the second question
which I would formulate
from the point of view of that
that it may need ^{some kind of} answers
consists of
what if you consider the element of Consciousness
how ^{well} did your system manifest

for example you think and say
here somewhere is my Consciousness
for example, illuminated in such and such a place

that ^{means} optically it means illuminated
at optical levels x

then the neighboring element of Consciousness
first of all why is it located
^{well} at some specific point

secondly why is it called
neighboring element
and an element of another Consciousness

and based on this, how ^{to} do it like this
so that the management ^{would} be common
creative in terms of always having places, ^{let's say} yes management
always areas of management

and there would be no problem with the presence of concentration there
as I showed by the number of spheres
by the concentration itself
in physical space

so here is the answer to this question
that when you organize a system
i.e. look
how your body is organized
analyze
see how the event is organized

then here is the commonality
in the organization of any element of Reality
the concept of "community" in general
this is a sphere for example yes information sphere

this is the sphere
or simply the space of information of this type
that all the transitions exist there
and all levels of knowledge

and here is the concept
revealing another structure of Consciousness
This appointment includes
and the purpose means another design of Consciousness
in this place

i.e. you see the work of the Creator
to create this element of Consciousness
if you go deeper into the system

you see for example
Well let's assume there is one sphere
2 meters away from me
2-2.5 meters yes

I make differentiation
I see that another element of Consciousness
First of all, I can appoint
say that this is an element of another person's Consciousness

and at the same time I can ask
unified approach personally from myself
i.e. to make a Spiritual impulse of the same level
Well as if there was access yes

i.e. the same signal yes
for example Spiritual Scanning
spiritual knowledge there

and then I get
that in principle the Creator works
it's the same everywhere

i.e. what difference does it make for the Creator
which whose element of Consciousness
where is it located

so when you go deeper
well, in comprehending this level of the Soul
through the logic of the development of the Spirit
pay attention
the level of the Soul through the logic of the development of the Spirit
then you see how the Soul manifests itself
in your physical body

and the organization of that point
Here Well, let's say assemblies yes man
that point I mentioned
around which it gathers
all information of a person
already looks iterative
i.e. in a logically consistent manner

when you look like this for example
you will see answers to many questions
according to today's lecture

when you ask every step
as logically manifested

i.e. you have nowhere to rush

each element of analysis
it won't run away from you

so you set about doing some analysis
it is fixed
the fixation system is even more rigid
more reliable , as it were

in principle it is absolutely reliable

for example, there is no conventional system of physical spaces

and therefore try to work
always systematically focused and calm
in the areas you are involved in
but on this basis
which I just mentioned

but why exactly this way can still be thought out
and find the appropriate level there
there are or are there several answers
or the plane of the whole answer that awaits
or the next answer or question

here is the ending I gave for this answer
not clearly shown
as if by fixed phases of Consciousness

i.e. there are hard phases
which are simply recorded
and that's all
and you understand the single digit value

and can we understand generalized phases
i.e. they did n't form into a concept
but you can understand them too

Basically, it is the understanding of the Soul

and try to manage
develop this understanding
understand with the Soul

do not translate into logical phase
don't even transfer to the Spiritual phase
and understand with your Soul

that's what I would count
that it is useful in mastering lectures
where is the mechanism of understanding
often it is polysemantic, i.e. multifactorial

and such technology will help

in this case, I am now answering the question

which is in front of me
and that means it has this content

my son has problems at school and in the yard with children
Means *he's* here further I'm already reading
Well, first *of all, he's afraid and doesn't want to defend himself.*
and that means *they don't play with him and beat him*
that's the problem

so from the point of view
technologies for managing this situation
associated with creating a normalized development of the son
I first of all mean to call him Vasin Sergey

First of all, I suggested this characterization
I specifically identified this coordinate
like such as first name and last name
what is important in this case
using collective Consciousness
because it happens in society

i.e. some elements
there is no need to conduct it as if possible
through remote control, so to speak
when you don't reproduce

if there is an opportunity to say it is better to say yes
for the students to rule
this is that case
because it concerns social systems

i.e. diagnostics
It is not always unambiguous of course
you don't have to say anything
in this case I counted
what is better to say

so that's when specific systems are identified
you just work now
Well, let's say together yes on this occasion
and work as follows

that you need to install the system
means the development of the Creator's technologies
throughout the school

from this system
to develop for example there Well there in Moscow
then around the world
and it turns out that it shouldn't be
Well as nowhere oppression of anyone ever

i.e. this is a completely general construction
do it right now in front of me

from something so seemingly local
but a fundamental case
because in control technology
it doesn't happen as a rule
there are no private or some minimal cases
every case always has the same
Well like the value or something, the same status
as a rule

that 's why the management is unified
and the meaning is that for the Creator
then any situation is the same
in essence, the control impulse

and you study the technology of work
this is how the Creator works

therefore, according to this technology
you do it now
with an exit to the Macro level

use all the components of today's lecture
Who understood this how?
and this needs to be done right now

and here is an element of your understanding
as you understood
output as a sphere
i.e. work in the sphere

the sphere is in front of me
near the floor plane

and the sphere of understanding
is located at a distance of 2 meters

isolate the area of understanding "how to work"
this is other information

and I'll watch

i.e. you are solving a specific problem
with the Macro sense of management

at the same time you can solve in parallel
that arise in your course of management there
own there for example, problems, own tasks, etc.

if a control problem arises
along the trajectory own task
or the task there is well its own task
this may be the patient's task
it turns out to be your own too

just associatively
on the street you saw something somewhere
as if completely apart
decide anyway

and the iterations of the solution should be like this
what is at each level
logical development of management
you should get the exact solution everywhere

pay attention to the details
i.e. if a task arises
related somewhere you saw
there is some kind of harassment on the street
children, let's assume Yes
include all this in the management
just children who are homeless
include in control

those. normalize everything
in the course of seemingly only one management

and that's when you get to the control center
i.e. you reach the control with a signal, let's say
to the goal yes
optical control target

then solve the Macro-problem again

i.e. disseminate the identified
or there are applied Laws for Macro levels
including endless development

and now look
it means through inner vision
Spiritual vision clairvoyance
look at the difference
areas where management took place
into the realm of understanding

and do it like this
but make it Soul
that the spheres are the same
they are no different

your area of understanding
and the management sphere
it's the same thing
for the Soul

this needs to be done
The soul must work now

it is a tool for work
i.e. not at rest
we work through indirections
and specifically the Soul works

right in front of me again
or in the space of the Soul

more precise characterization
Soul spaces
Soul Management
Soul space

and now when you do this work now
Well, in many ways we almost did it
I'm just speeding things up a bit

did you see
that in the future this will still be revealed

there, for example, in a few minutes, yes

that this is the manifestation of the Soul

everything you did in this space
this is the manifestation of the Soul

and the manifestation of the Soul is you yourself
including yourself
I repeat the word "including" many times
here in today's lecture
I do this on purpose

leaving the following meaning in knowledge

and so when you do
collective well let's say goodness and collective salvation
on one particular case
extending to the Macro level
you get yourself

i.e. the eyes of the Soul
if so, well let's say yes speak
from that point of view
they see you yourself

i.e. any creative management
any creative action
you get yourself right away

hence
means any private management for creation
How is that
firstly, real and development from outside
any system positive development
Well For example there is a solution to this issue
according to the norm
so that no one would hit
so that he can develop socially normally there, yes

this person
which we were just talking about
and in relation to which work was carried out

and at the same time you get

in every impulse of creation
as ourselves
and so is all external management
but the impulse of creation occurs
from the Soul initially
for example located
inside your physical body
you can look at it like this

and then that principle
What
and management
and the control object
and the primary control impulse
are in one element of Consciousness
how i asked the question during the lecture

in this case it goes to that
what is this located
in one element of the Soul

the body is in the Soul
or is there even a Macro sense then?
i.e. development towards the Creator
level of universal love

or is located
in the level of one's own development
for example, the ideology of creation

Well, what about the ideological goal?
in infinity
it's the same thing

the next question is this

Means *I used to*

Well so here the question concerns some kind of prehistory

Means *I used to fast for 10 and 21 days*

but after getting out of hunger

weight is restored with a sign Well *plus* let's say so

your attitude to fasting

and recommendations on how to maintain weight loss

Well, first of all, if there is time, let's say so Yes

and there is a possibility
to deal with some other systems

such as physiological or something
no problem who likes to fast there
he can naturally

There are, however, restrictions associated with this
what in this case

It's better to have specialist consultations ^{here}
as if not every fasting can be, first of all, useful

my attitude is related to that
Well, I treat it like a system.
again well as if of a personal plan and personal ^{yes} Perception

and I think that it is still possible
that means including during fasting
need to use
the system of structuring Consciousness
related to, well, in terms of your development, to that
what you should understand
what happens during fasting
at the level of self-diagnosis of self-perception
your self-development

and in principle if ^{there is} a starvation effect
well, it is connected with some specific level of the goal
If possible, still follow up
how is it done
due to the structure of Consciousness

i.e. I am still a supporter
track any process
on Consciousness
and so that Consciousness has information
^{it turns out} your immune system understood
what's happening

and in principle in this case
immune system
then it can regulate ^{then}
Well, what about your further development?

those. your information
does not develop discretely
when you can control everything
Consciousness

i.e. in any technologies I advise
after all, technologies of control of Consciousness
to implement

Means *the next question is this*
the baby had a rapid labor
increased intracranial pressure
complaints of headaches

well in this case
technology needs to be applied
from the point of view of today's lecture
this is to divide
just for example the left hemisphere
consider from the point of view of processes
which were in the past
there a second day two well two weeks ago
such a volume of information to consider and

i.e. the left side of the head
you can even take it
but the left hemisphere of the brain is better

and in Consciousness to highlight that part of the processes
which are related to these events
related to the brain

those events that relate locally to the brain
you don't necessarily have to track them
it is possible to trace it
what about this hemisphere last week
related

if we speak
about the corresponding [...] framework of Consciousness
then here are the elements outside this level
this is a logically rigid framework

and the elements
which you reveal in Consciousness
this is a logical phase
manifested in the Spiritual plane

in the right side of the brain
precisely in the right hemisphere

we need to consider all future events
and in the conditions of, so to speak, endless development
and consider the level of docking
these two levels , so to speak, yes

i.e., to put it simply
current time element
how is it manifested at all

i.e. current time
if the left hemisphere is past events
and the right one is the future

with such an appointment

of the child look like then
there or all the people around
and how they are manifested from the point of view of the Norm
this is what is the norm at the current moment

i.e. firstly there shouldn't be
yes, some antisocial events, various explosions
those. should not action
which means what you are doing now
must provide for
that the future element of the child's development
once means it assumes and establishes
besides what it suggests
really establishes and asserts, so to speak
absolute norm of social plan

when you consider such technology
then you will see
that the signal from the future is normalized

i.e. it normalizes the approach
simply the Spiritual development of this situation
when selecting a logical phase

when you did this you got Norma
which came from that
what the Spiritual phase worked on

and here's how the Spiritual phase worked
this may not be observed

if you want, watch
there is pressure of the Spirit there
to a peculiar similarity
like atmospheric pressure or something
to the logical phase of development

it turns out that when you learn
and logical phases are set
mixed with the Spiritual plane
you get it specially
Spiritual pressure characteristic

this characteristic is formed by the Soul

if you go higher
or so to say, you ask yourself a question
next level of knowledge

you see how the Creator works
in the same part

then you can just from knowledge
by means of optical reflection, as it were
get the same

i.e. I think so
what in this case in the lecture plan
we need to apply this technology
in today's lecture plan

and look
what else can be detailed
from the point of view of this conditional distinction of mine
what is coral
and there is water
what techniques can be added here

you can work this out yourself

the question is quite relevant here
related to that
is the control correct?
there *according to my technologies*
using my terms
or else Well *some correction is needed*

in this case, the correctness of management
this is an achievement
real systemic security of development
let's say yes elements of the development of Eternal life
as an ideal and real prospect

and at the same time achievement
own control systems
for example privately

in this regard, technologies
used as if in an ideological sense
this is one type of technology
and they must be spiritually differentiated

i.e. correct management
this is the Spiritual-logical phase
also containing
and the phase of the Soul in the space of the Soul

which is revealed from a light source
as the goal of Macrosalvation management

i.e. it's like some kind of ray
endlessly coming from you
and signifying the goal of Macrosalvation
then you are managing correctly
so according to the Macro sense

those. Soul Spirit all concepts
which are used in management
focused
Well for example coming from your chest
like a kind of ray
which is directed to infinity
and this beam has a mission and meaning
and the Macro Save function
in optical terms

i.e. correctness can be diagnosed
even in optics
if the beam starts
well, deviate or narrow
or get more into specific tasks
and not somehow relate to the goal of Macrosalvation

or to decrease in intensity means
you just add a goal

i.e. the meaning is this
that you remember periodically
what do you control
from the point of view of Macrosalvation

It's better to remember this the first time
then it will still happen automatically, as if
and any method of my management
already contains this

but here to have
Well like a kind of lighthouse or something
this needs to be done
I think it's useful from time to time

and the second level
correctness of management of the following plan
a private level
finding
basically better on a spiritual basis
but logical connections are also possible
with this beam
in your private management

so what about the technologies you use
you can apply it in different ways
the criterion I have indicated
well, built as if on the optics of Perception
he is one of the criteria

Macro Rescue Management Goal
maybe it's different in general
maybe, well, maybe there is
it's just not manifested in the Spiritual content
and in the form of some kind of optical system
on Consciousness

but at the same time on a Spiritual level
you know for sure
what do you manage for Macrosalvation
This is private management and communication systems
it's already clear that they already exist

in your control

i.e. what I have indicated at the optical level
it's like one of the elements
well, which you can kind of touch
you can even digitize it there when recording videos

Spiritual scanning at high speeds
Well, when it comes to Spiritual status
there it is often not digitized in any way
because it is not visualized there
but it's the same thing

that's why the main thing is to have a principle
and this is precisely the ideological principle
that exists in you
in your Soul
this is the salvation of all
systemic safe development
and as if complete means
essentially identified development system
in many ways it's still like that here
essentially revealed

then the question immediately arises
the essence of development is evident in many ways
that development must be Eternal
and often this is the only value
so the essence of the development process

if the process is interrupted
the whole system well as if theoretically possible
restructure
then what's the point anyway
semantic element of development yes
any object of Reality

and it is possible, for example, at this level
find conceptual systems
and make them criterial as well, as a substructure

I just spent
one of the logical circuits
in this case

therefore in development
there is both optical
for example, Spiritual
statuses
as well as logical subsystems
which are criteria systems
in relation to the direction of control, as it were
depending on the level of your Perception there

level I mean
or it is optical
or he is Spiritual
I'm not really talking about level in this case
well which one is related
with the concept of the level of thinking
or depth of thought depth of knowledge

because the depth of knowledge
that's exactly what it implies
it's like in each specific case
a special path along the so-called organization
well, the systems of correct development

I just talked about the main thing
but as if to a superstructure system

and by applying control technology
you can just ask the question
and just get it
criteria for the correctness of an action

but in most cases
This is not generally used
because when you apply control
you still track
next level of iteration
and correctness is already a state of the Spirit

here we must keep in mind
that you work in an unusual space
where correctness is a kind of closed system

Correctness is also an answer
and he is known in management

or should we ask the question
get an answer right away
Well, according to the specifics of its development
You know
that the question often does not have time to form
there is already an answer

i.e. it just remains
control action only

This also needs to be taken into account
because the management that you do
this is real time management
and often the concept of correctness
there is only
in the act of management itself

on this
I'm finishing today's lecture

thank you for your attention
