

GRIGORY GRABOVOY
Structuring of Consciousness
Managing an event by developing into the future
(11)
11.09.2001

Good afternoon
in this lecture
according to my technology of salvation and harmonious development
I show event management technology
at the level
when the object is not fully identified
and includes an element of future self-development
i.e. at this level of your Consciousness

This technology implies
from the point of view of Macrosalvation
what when you consider
any future level of management
this applies specifically to management
in this case, future events

then this level contains
primary information complex
associated with a specific event

and additionally contains
as a specific control setting
level of control over a specific event

so here is the event management level
which is located
in the form of a superstructure element of Consciousness
or the controlling element of Consciousness

this level is built like this
that you can change the construction of the past

i.e. if you, for example, in real time
faced with the situation
which speaks about that
that a certain problem has arisen

then you can

minimize in real time
the construction of this problem

i.e. to make the problem less severe
at least to the maximum possible level
if it is for example a disaster or a health problem

it is precisely this superstructure level of Consciousness
it plays the role of managing that element of the past
which is intersected with the current time

for the construction of Consciousness
element of the past as a volume of information
can be either remote from the current time
just by time
logically it is clear
and can be crossed

in this case
this is exactly the element of the past
which is intersected with the current time

on the Spiritual level
it is considered as a continuous quantity

in this case
Spiritual management comes down to this
what you should perceive
continuous quantity
having exactly these characteristics

when you are on the Spiritual level
find this value
then further control comes from the Soul

and here through Macrosalvation
management consists of
that you are only at the first level of Consciousness
logical Consciousness
find this value on the Spiritual level
identify
and control is carried out
Here and it is accomplished by your Soul

at the same time, it means you must understand here
that the management that is carried out by the Soul
this control is unconditional

and often it does not need an additional level
well, like corrections from the Consciousness side

because the Soul
on the spectrum of the general creative plan
is aimed precisely at that
to align the information as much as possible
in case of a possible problem

from the point of view of specific management practices
including a self-regeneration system
here you should immediately see that design
that when you do such management
then the self-regeneration system
it is embedded in the pre-transforming space
concerning the system
means identification by the Spirit
of the same size
concerning the present and past tense

i.e. here is the principle of self-regeneration it is located
in the space that pre-transforms the space of events

and when you this space
you just consider it at the level of the Soul
this is where the term applies
vision of the soul

you through the sight of the Soul
must see this design
and then you get a self-regenerating system
under control conditions
a possible problematic event

i.e. there is self-regeneration
in conditions of harmonious development, for example
and in this case it happens
under control conditions
a possible problematic event

and here is the level of the problem
it is revealed as a primary structural quantity
at the level of generalized perception

let's say you encounter
with a large amount of information
completely arbitrary information

it could be physical information

for example, some inscriptions newspapers television

in this case

pre-transformation information

some problematic event

is at the level

vertical planar structure

i.e. identification system

Spiritual Identification System

what is behind this plane system

problematic event is found

consists in the fact that

what if you scan normal information

well even sleep information

and at that moment

you receive on the Spiritual level

non-spherical event

i.e. the Spirit identifies information

as a non-spherical system

namely as basically

vertical - plane system

then consequently with this event

We still need to work to the identification level

i.e. what can come out of this

the meaning of management is that

to make the management before that

how the signs were formed

possible problematic event

and in connection with this

namely the identification of geometric systems

for example, in this case in the form of a vertical plane

this is the first principle of management

which allows the event

or not turn around

or not happen at all

It's better of course to work to such a level

so that the event does not happen at all

in this case we are talking about management

it means this type that you do not apply

for example, control on the physical plane
i.e. you don't call, you don't inform
that some problem is happening in some region
and just don't let this problem happen

second level of management
when you want to combine for example
logical
i.e. physical control plan
and at the same time you can, for example, call
and report a possible problem or disaster

this level of management
also needs a preliminary level
means the controlling action of your Consciousness

it's more about management
concerns mainly
level of propaganda level of education
and therefore the corresponding type of action
as if an algorithm of action on the physical level
must be verified in relation to
including the transfer of knowledge
by control action

i.e. in principle yes, of course it is possible
make control unconditional
and then no one will know about the event

but you can make control
coupled to the physical layer
where on the physical plane
do you leave any protocols?
make some formalized fixed calls
and all this gets into the protocol of action
for example, by controlling clairvoyance
where is the stating part
brought out as if direct clairvoyance

and then you can knowledge later
to transfer according to the completed act of Salvation

but when you do such management
First of all, you should definitely do it right away
it means the same as in the first case
when you control without connection to the physical plane
to prevent an event means, well, let's put it this way

best of all is problematic
as if in terms of its deployment

and on the other hand
some signs of the event may remain
or if the event has already occurred
then we are talking about minimization

so here is the control of Consciousness
where the connection with the physical control level takes place
consists in the fact that
that plane that I just talked about
at the level of Spiritual identification
this plane should be
constantly further
from the level of the physical plane event
and she must constantly, *as it were*, move away from it

i.e. the system of Spiritual identification is as follows
that you build management on the physical plane
logical control plan
i.e. you are viewing this in your thoughts
and you can build a sphere in front of you
i.e. do it right now this is exactly the action
at the moment of accompanying my verbal

you are building a management sphere
some problematic level of events
so here is a vertical type plane
which denotes a possible problematic event
this plane is constantly moving away

so when we consider
for example the optical level of Perception
on the physical plane

i.e. there is an opinion that *there is, for example,* a universe there
it is constantly expanding
that some physical structures
optically *as if* perceived
at the physical level of matter
they *seem to be* moving away all the time
and optical recording means
this is recorded

do the analysis yourself *so to speak*
Houses

concerning that
what if we have
removed as if on a physical level
element constituent in the form of matter
then why sustainability
at every point of physical matter
is increasing

i.e. why with such a Perception
we have an increase in stability

from the point of view of the technology that I am giving now
here it turns out that you have
management means this type
that the removal of this so to speak vertical plane
this is the principle of sustainability of your management

you must delete
constantly perceive on a physical level

and when, for example, the plane is vertical
in pre-Spiritual identification
it starts to lean, i.e. it becomes at an angle
let's assume 45 degrees to the horizontal plane

then this is the form that characterizes
equidistance of this plane
and then you don't need to do dynamic actions
in management
in control design
a possible problematic event

in this case it arises
static control system
by the way the system of statics of Consciousness
which characterizes dynamic action

and from the point of view of managing any event
straight from your Consciousness
It is important to consider the design
when does it mean you can manage
either by developing the Spirit, i.e. by feeling movement
and at the level of the Soul this is the movement of the Spirit

and at the same time you can create
such a Spiritual construction
fixed in the mental sphere

i.e. in the mental sphere
that there will already be static there
and the Soul controls statically, i.e. in a state of rest

in this case you have
well, sort of logically existing course of events
and into the logic of an ordinary everyday event
let's say you went to the store and did some action
including the Act of Salvation

but at the same time the fundamental management system
by Macro event
by access system
into any event structure
this control is happening
because you are in the logical sphere
nested control
through the statics of the Spiritual image

this means when you do as I explained
it would seem that it was just
change of geometric position
let's assume a vertical plane

i.e. tilt this plane
as if from myself
from your physical body
at an angle of 45 degrees to the horizontal plane
then you do it not mechanically

and you do it so that first on the Spiritual level
you are entering a kind of installation
that this plane is constantly moving away
from the control object
by the level of creative management

and the second when this object is already
this plane does not take on a vertical form
this control is implemented as a static control

i.e. the action is not divided into formalized
as if mechanical control
when you make a mental effort
you can bend this plane

by mental effort
there is no need to bend this plane

it needs to be removed
at the level of Spiritual Administration
and at a very high speed

as soon as the plane
I'm coming back to her again
does not take a vertical position
it turns out to be static control
from contemplating this plane
that it is not in a vertical position

and this is static control
This is contemplated at the level of calmness of the Soul

those. this is where it is important to work out
characteristics of peace of mind
in a calm state of the Soul
you make the management logically precise

i.e. sensory level
and the level that implies , for example
well, some kind of variability of action
namely the variability of action

this level is it in this case
will be accurate all the time
for any logical action

as means independent work
right now here in front of me
make management
there on the radius, let's say, well, there, two meters from me
if we take the center of the sphere, let's say
somewhere in the area of my physical body

you should in this area
means to make management
mostly in front of me

but at the same time, it is like a sphere of stability
it is located somewhere within a radius of two meters
i.e. well, it's like I'm inside this sphere

i.e. make this control
that's when you'll be passing by
inside this sphere
and this sphere is approximately where they fall

so the participants of let's say today's meeting
which are near me

I can suppose to move the radius
as if the center is further away from itself
then people will get in too
which are within your control

look at the next problem
people who get in
into this spatial sphere
how do they react
even if they don't control for example yes
as if as you mean
they can manage in their own way

and secondly, when is management done ?
then this is management as it is carried out
by passing through, well, as it were , the border of this sphere
i.e. how do you cross the boundary of the sphere with Consciousness
Push

i.e. we work very simply now
just on a physical level
you mentally imagine
what you enter into the thought means management
Consciousness
then go through this area

that's when the first element
see how people interact
which are as if within the framework
this dynamic sphere is located
with your control

and how do you cross the border of this sphere

when you cross the boundary of this sphere
then look carefully
that you hit the nail on the head
a unique entry space
any element of Consciousness
including any element of the World
reproduced in Consciousness

i.e. this border
when you pass the boundary of the sphere

this this system has such characteristics

when you, for example, look
if it is possible, for example, to make a digital recording
and look at the digital recording
in the form of an optical magnitude
on this interval

then according to the classifier
this entry will hit
precisely into the elements
only your personal Consciousness here

i.e. the coordinates of this system are very specific
these are elements of your personal Consciousness
what do you consider your personal Consciousness

so in connection with this
like the training that is currently being conducted
it concerns what you highlight
elements of personal Consciousness
or let's say individual Consciousness
what do you refer to
with an element of self-identity

and that's when you've already approached the management
well, sort of to myself
entered into the element of the brain , for example

then you can identify
element of Consciousness
with your own brain
or with the state of the brain

i.e. you can count
what he supposes he thinks
some biochemical processes are taking place

and here is the principle of individualization
can be considered
as elements of interaction
as if neighboring areas of the brain
with neighboring areas of this brain again
but neighboring in terms of
manager as if neighboring

like, for example, there is a cell on the physical level

is there one near this cell
nearby inside the physical body
there are control cells

and that's when you enter this cellular system
then you will see
that control occurs in real time
already because you found these cells
in the conditions of the brain

when you look at these elements
on yourself
then you will get
own design
own physical body
and at the same time you will see
well, the level of development of the body according to connections
with the general management process
in the elements of your Consciousness

what I'm saying now
has as I specifically enter
advanced level
at the speed of, let's say, a conversation
If possible, listen to this lecture element
that's right, plus or minus five minutes
several times
and try from the brain of Consciousness
go out of the physical body
see how the body interacts

and when you are
inside means precisely the brain
try to see
i.e. to apply simply contemplative, so to speak, clairvoyance
i.e. to see there, let's say there's a movie theater there
can be seen in the Arbat area now
look just look

then look at some continent there
just concentrate
there we suppose North America
or South America or Eurasia

and pay attention
what when i say look
when you kind of focus on the task

then you have what you perceive
as if it were no different
from the fact that you seem to be must remember

but when you go down below
you see there are leaves and people walking around
i.e. this is real clairvoyance of the current time

when I talk about that
what is the concept of clairvoyance
in this case it is necessary to analyze
at the technology level

I started with that
what the elements of the Soul showed
by the control level of statics

and that's when you have a static picture of Macromanagement
you will unfold
you will see
that clairvoyance is simply
element of such level of knowledge
when you have super fast access
to the elements of the next Reality
or external Reality
external to the body for example yes

and when will you come back
to the elements of the exercise
well to the one I gave
look at your physical body
leaving the physical level of your body
which relates to the brain

then you take a look
that control can be exercised
not only from the brain
for example, from a finger from one cell, etc.

i.e. Consciousness is not concentrated
at the level of just brain activity , for example

and if you have such a principle
well, it's like an approximation, an axiomatization of Reality
then this level allows you
make sustainable management
by access to any event

i.e. the ideological principle
direct access to any event
organizes the stability system
in your development

Moreover, I give technology
in a particular case I showed the technology
which refers to the element
well, sort of clairvoyance
In fact
this is an element of the development of your Consciousness
via high-speed access

when you develop this element for example
and set a goal
namely access to any event
at super high speed

you will be able to know Reality in the current time
and moreover, change or minimize
already existing problematic structures

if they exist for example
only in the information you have reviewed
only some people might notice
or no one will notice at all
but you can actually change the structure
and let's say not allow a macro-catastrophe there
or even a minor disaster

if we assume that the action has already been recorded somewhere
there is some level of society
then the principle of control
it comes down to the fact that you have to
restructure the existing structure
while changing the coordinate of the flow of time

i.e. you have to time
Well, what would be the best way to stop it?
before the event occurs

and the principle of minimization
introduce the principle of minimal vertical lines
impulse of Consciousness

technologically it looks like this
what about taking into account that part of the lecture

which I already gave today

what when we talked
about the plane system
which is in front of you
and which is like a kind of wall
is a possible problem

then the level of vertical impulses
segments or rays
then this is precisely the level of management
on the contrary, in a creative sense

and when I say
what vertical systems are for Consciousness
there is a principle of generalization of, as it were, criterion structures

I speak in the vertical plane
I say it again
that vertical impulses are positive

i.e. if we break the plane
into several vertical segments
then we get what we actually get
with such action of Consciousness
we have a positive structure right away
in the control impulse

as an independent work
break this vertical type plane
means a system of vertical segments
which are discrete
and get positive management
it would seem from negative information

i.e. it turns out
that you have positive quality management
as if from information
which you have deliberately designated
how is negative information possible

the thing is that in Consciousness
elements occur as if they exist " objectively"
objectively in quotes
which have many
well, sort of docking nodes
and have stability

in your area of control

and there is ^{therefore} management that
Well, it is definitely being built
because there is a management goal

and that's when you set a ^{goal}
i.e. unconditional control
accompanied by the purpose of management
as a task to overcome
here are the structures of ^{some kind of} objectification
which can, for example, interfere ^{there}

then this is the principle of transformation
Well, let's say the principle of vertical jets
you could call it that, conditionally

it allows control to be performed
without wasting time on that, ^{for example}
^{to speak} at the level Spiritual identification
create speed control
so that the plane is not vertical

as an independent work
make the plane non-vertical
with only one vertical pulse
in the form of, ^{for example}, a control segment
towards a creative plan

this can ^{basically} be done right now
but it's better to do this after the lecture
and at the same time, if possible
don't waste time on management

i.e. in Consciousness there is such a principle
what do you look at when you look at the controls
do you think
that you spend time on this management there
you do some actions ^{there} for some time
then ^{for example} the time of Consciousness ^{yes}

and make the control here
vertical control impulse
without wasting time on management

i.e. do it
well or ^{as if} by the way or at the same time

but at the same time move the control element away
in temporary
in a temporary phase of this type
that this does not apply to comparative time costs

well, for example, if you are driving for a very long time
it's a few hours by car
then there is one second
this is considered to be time incomparable
yes, for example, this term is acceptable in Consciousness
as if time is incomparably short
let's assume for your Consciousness

if you see that you have to travel for several hours
then a few seconds
for you the time that is
in some niche of your Consciousness
geometrically find this niche

i.e. Spiritual scanning is done
you are kind of on a Spiritual level
perceive that logical phase
where is logic i.e. Consciousness of the logical type
intersects with the Consciousness of the Spiritual plane
and this niche has rigidly fixed forms
it means geometric shapes

make a kind of atlas of location
each for himself

finding such niches
near your physical body
individually according to the management objective
take any target
including, for example, the goal of macro- rescue

why do i say for example
because the goal of Macrosalvation
still included in this technology
as an unconditional component of management

but it can also be included logically
and you will simply see
that you are in a stable zone

the same kind of training
see why one technology

includes for example the level of Macrorescue

or maybe another one

so that she turns it on

something needs to be added to it yes

for example, in the goal of Spiritual content in management

This is what needs to be done if possible

when you are dealing with practice or technology

which, let's assume, is primarily perceived by you

well let's say outside the lecture course

you find a method

these methods are definitely independent, for example

then you must build these methods like this

so that the Spiritual component

included the management objective

according to the system of Macrosalvation

sustainable endless development

and when you do this type of management

how simple is it to formalize

i.e. you assign a site or find a site

including appointing

which speaks about that

that this time is very short

incomparably small

you move on, sort of automatically

in fact, already under control

from the Soul

into a timeless phase

in control from the Soul mainly

control is carried out

in the impulse of a sort of primary action

i.e. the first fact of control

especially for Macrosalvation in the timeless phase

so the goal of this training

it's not easy to find a piece of Consciousness there

which characterizes

incomparably small time phase

or as if a timeless phase

in relation to the management objective

and move on to management like this

through a logical construction , as it were
where control is carried out outside of time
and is accomplished by the Soul

this is the goal of this training

when you go there to this office
the task is only that
to formalize
through the systems of one's own Consciousness

control system
for example, for own management
by main purpose

exactly on the main
because well let's say if you're sailing on a ship
where there is a lot of ice there
then the task is somehow
or does it mean to go around the main iceberg
or specifically swim where there are fewer ice floes yes

i.e. choose an event
follows naturally from the main goal
in this case

in this particular case
when we talk about control from the Soul
where there is no time in management

and that's when you start
manage from structure
where there is no time management
the question immediately arises
what logically do you mean you got used to it , for example
do a sequence of actions
which is associated with time

but here the situation on Spiritual Perception is completely different
i.e. management must be carried out where there is no time

and what is the advantage of this control
as if from the point of view of reform time
possible macro-disasters there
including, let's say, any catastrophic events
let's assume a social plan
well let's assume there in the distant future yes

from for ^{example} structures
a large number of event relationships

that when you work outside of management time
then the anchoring factor
to restrict access to time
you don't have

Consciousness is structured like this
what is the factor of event binding
is a spatial and temporal coordinate
which relates the event
with space and time

if you manage outside of time
you immediately find ^{yourself} in the control center
this event

and as soon as you enter
into the structure of the Soul
then the task of control over management
consists only in that
that you are just
trace harmonious infinite interrelations

it is precisely this creative type of relationship
which are located
in an infinite level of development
from your Consciousness
and develop your Consciousness, among other things
naturally infinite in the same way

then this is the control system

i.e. on the Spiritual level
you just need to find it
these threads of Consciousness are developing
enter them
and you get control of your event
so that you bring in the purpose of the event
into this thread of Consciousness
which is developing
in infinity and harmoniously

when you do this control
Well, let's say there many times
in relation to some minimal tasks

there or to macrotasks

you see what is basically at this level
control
it is carried out in approximately the same way
or sometimes even the same
where is the event classification
has no original meaning

and when you develop Consciousness further
you enter into direct communication
with the Creator

i.e. you see the Creator, you see His work
and you see the principle of your own self-organization
within the framework of development from the Creator
and according to the tasks of his personality

here is the task of the individual
she is identified
with the Creator's task

i.e. maximum identification
personal development there
where you know exactly and do exactly what you want
tasks of the Creator
for example In eternal harmonious development

when you identify yourself like this
you can build your Spiritual content
from this point of knowledge
from this point of Consciousness

when you are
at this point it is precisely knowledge
then you can build
and the structure of one's own Soul
i.e. to see how it develops
and see its position static position
in the system of general connections, i.e. in the world order

and when you see this
you gain knowledge

knowledge of action
knowledge of what to do

i.e. to see the state of the Soul
within the framework of the world order from Consciousness
this is the second formulation but it is different

also means
means that you get harmonious control
and you get knowledge
next step of action

here to know what to do in a second
In principle, one can abstract oneself from logic
and reach this point of understanding the world

and then you know
what to do in a second
without the logical phase of cognition
i.e. where there is no time

as homework then
you will have to make this type of control
what are you doing management as i explained
outside the logical phase

where there is no logic
no time
no combination of events

I just showed you roughly how to do it
but this is one of the options yes management development
through the element of timelessness

when you get into the logic of events
then you can hit
in areas that well as if conditionally not containing time

i.e. if I, for example, take some part of the table
then in a second it remains a table
i.e. in relation to the flow of time
here, actually, it is not important

in the event you can find plots
where the relative flow of time is not important

and so if we consider the development of society, as it were
from the point of view of world history there
assume we take information about some castles there structures
which relate to cultural national values

then when you unpack this information
and enter into this information
then society, i.e. the main social idea
like , for example, a monument of some architecture

it consists of the following
what does the monument contain
maximum quantity
namely timeless systems of development

i.e. it is clear that it stood for so long
because it makes sense logically
that the population somehow protected it, for example

but from the point of view of the organizing substance
when each object of information
exists in Macromanagement

the monument itself exists because
that he chose such a position

i.e. reduction of the time component
still creates control
including influences society

let's assume at the time of wars
there is no destruction of the monument

if you look
that there is control from the object
Well, let's say there 's nothing like a monument
as if in a system of common connections
it also has an impact
on the developing Reality

then in that system of threads
harmonious development of Consciousness
about which about the level about which I said
as an element of control creative management
then at this level
the monument also recreates itself
i.e. every element of its development
it is self-recreation

society has
i.e. people have such concentrators
as if it were a mental or historical activity

in that, for example, for some reason
and generally speaking considering
that it is of cultural or historical value
do not destroy this monument

so it makes sense to transfer control in this way
that create such geometric places now
in the sphere in front of me
better directly on the physical plane
where management happens exactly like this
due to areas where time seems to slow down
build management directly
just creative type management and that's it

and I'll watch right in front of me

the thing is that with personal identification
let's say self-identification
or identifying an individual control factor
psychologically you first of all look at
your own management

so i said to build a sphere
and try to manage everyone at the same time
at the control point

when you mean at this point that I said
as if at a timeless point, let's say
or a point having a minimum content
temporal context in development

when you do such management
you see that the very purpose of management
it's like in your impulse coming from you
she starts to sort of blur on a physical level

i.e. watch this training carefully
when you do management with everyone
through such points
the management level itself
he is leaving the control zone

i.e. if some social cataclysms occur
then such systems
they are less susceptible to for example
there physical destruction, including

because these elements
seem to emerge from the control area

i.e. the psychology of management consists in the fact that
that they firstly become less noticeable yes
as if psychologically understandable

and secondly it means an element of developing time
which characterizes the signs
there newspapers, let's assume, electricity appears
and the architectural works there are ancient
they are still standing

they are comparatively different
in a logical event-driven version

i.e. time begins to unpack
as a related event quantity
Psychology of Perception

and that's when you do the management
for example, from the point of view of psychology
let's say a temporary factor of perception
or the psychology of the development of time
from the glasses of your Soul

then the characteristic means time
is the disparity of events

and that's when you accumulate information, for example
about some indestructible object there
the same monument or cultural historical values

then, as it were, the socio-psychological meaning
consists in the fact that
that you have accumulation of stable factor
so, well, connected , for example
with the same element of cultural value

and in accordance with this, if we talk about that
which somewhere means like the number of events
defines some kind of novelty that relates
to the factor of the speed of time

then the decrease in the number of events
in the control
for example, at the same level of cultural values

or there is writing and the like
there is an expression of social environments

these elements they begin to develop
as if living an independent life
sustainable and therefore closer to Eternal development

and so in this lecture I said
What
means the state of the Soul
state of rest
and management
this is also what it is
and the element of Eternal control

as an independent work
following the logical chain of today's lecture
by the factor of including, as it were, event unpacking
element of Eternity

look at how each event
from the perspective of psychology of perception
contains the element of Eternity
in the elements of the speed of development of the time factor
exactly in this setting

i.e. it looks like this
when you perceive Spiritually
that time is moving very quickly
i.e. you can put a lot of technologies there
including an infinite number of technologies

that is the element of Eternity
manifests itself in the event factor
it could be the same table, a person, for example, and a tree
or some event is generally multi-component
situationally multicomponent
multi-link

when you enter there
event element
into this system of knowledge
then from knowledge
get your own Eternal development

at the same time your knowledge
extends to that

what are you doing in the eternal others

i.e. the level of creative management
spreads to these systems

for example, if you cure one patient, for example
from , well , from some kind of complex degree there diseases
which is considered incurable
either cancer or late stage AIDS

then you see
that the dissemination of this fact
just because you know
causes an immediate improvement in redundancy
as if positive characteristics in health
everyone else who has one in principle
who exists and who will exist
second vector

and if you for example keep talking about this
and you record it somewhere
then you get something like exponentially
higher gain
structures
for the whole world

Well, to put it simply, one fact
characterizing some element of Reality
has an infinite development , as it were
for all the future, past and current, for example

and when you consider such an element base
then you see
that's what I meant when I said "in the current time"
i.e. if you have development in the current time
i.e. you have some events, there are some tasks

if you are here the current time
you make it Spiritually exactly like this
as if you were starting from a central midpoint
I'm speaking in a complicated manner on purpose
simple thing now

so if you go out from this central point
so setting management tasks exactly like this
then you get control
because you do it

because you know it exists
and you
it turns out that you can basically do this

i.e. I brought it to that
what is the ideological attitude
given at the right time and in the right place as if yes
spaces even

just a normal everyday even goal
formulated in this way according to the system of Macro-connections
by the system of intermediate connections
related to Macrosalvation
makes your management sustainable
because you think
that this is for example for the sake of Salvation

here behind this mechanism
take a closer look
I always point my hand at this exact spot
where is this happening in front of me in this case

i.e. find the places where this happens
I don't always point there with my hand
where I make the controls specifically
in this case here

therefore , if possible
find geometric places in front of you
where simply focusing on a common everyday goal
well, any household stuff there
some kind of repair, let's say , some purchases

and doing it in this way
so that you understand the ideology here
in this place

i.e. you can understand, for example , in your head and in your finger
and do you understand here

when you understand at this point
then you get control
which significantly accelerates real events
physical for example plan
can speed up

and at the same time you get what you do

systemically sustainable
any household system
which you will implement in the process
it becomes systemically sustainable

such management is, in principle, tense
because you hold with Consciousness
plot
well, as if also by Consciousness
but in the physical Reality in front of you

i.e. as if constantly connected
with his physical body there with local control
but still, when you manage like that
you get quite targeted management
just on ideology

so when we talk
about the ideological factor of management
let's assume according to the Macrosalvation system
then these vertical lines
the segments or control lines that I mentioned
they exist in this way
that you can make a lot of them around you
but as if a large quantity disperses as if
concentration of control
for example, let's say, for a dynamic target

i.e. you need to do
not just managing there at the right time
and there, let's assume, in the right place
have a specific event
you still need to be able to comply
dynamic control objective

i.e. you should consider
what is management
what is on the Spiritual level
you always have the development of the Spiritual component

i.e. dynamics implies
your own self-development

You can come in of course
in the systematic management
always have very excellent results
but let's assume this is the level of dynamism

own again ideological goal of self-development
this is the level that is best to set
although he may be tense

here it is further
from the physical body often
and it causes a kind of tension or pressure
let's assume there on the thyroid gland or on
with active Thinking
you see that there is a kind of pressure going on
on the thought
i.e. thoughts seem to go in a rigid environment

so here it is this is a system of dynamic self-development
i.e. development in the dynamics of development of the whole World
as the central creative goal there
and as a management goal
in terms of self-development

this system should be
as home practice here is today's lecture
transferred to the system of peace of mind

i.e. in today's lecture you will have to
dynamic goal of self-development

i.e. having reviewed the lecture, well, sort of the other way around
then by adding the iterations in this way
that you can kind of take notes on
some layers levels lectures there

come to the task
what should you
level of control
I called the dynamism of the dynamic
dynamic self-development
get from peace of mind
and in statics in the calmness of the Soul you must
as if in a logical way
based on some specific lecture constructs
translate into peace of mind
translate

i.e. not even like assigning
and directly translate iteratively

quite a difficult task actually

I'm not simplifying it here on purpose

i.e. the task is to understand the meaning of the lecture
which flows not only as if in continuous time
forward
and consider the meaning of the lecture back

so well it's formal
if you take some flashlight there
and shine in one direction
then this is a flashlight that shines just the opposite

and it also opens up basically the same trajectory yes it turns out
but only as if from the other side

because I show the controls
including from the point of view of optical visualization
i.e. the effects I'm talking about
about which here I report there
related to the development of the Spiritual component

they can be considered
at the optical level
on an optical as if mechanical
as a form of management

and if I can shine a flashlight somewhere in one place
naturally at the same level
from the point of view of physical optics
if there are no obstacles
I get back

therefore as in the management goal
if possible, set the task in reverse
i.e. end-to-end i.e. secondary control
for the same purpose

i.e. in order to gain new knowledge
not necessarily at this point
take and get something new, for example
by means of some targeted volumetric knowledge
quite simple
illuminate the same object
kind of the other way around

and from the point of view of logic
you can connect an infinite number of points

to the same control point

without changing the design
and simply by hanging the control chain
right left there or from any side at all

it turns out if you have
set of control systems
even if it's a limited set

Let's assume we take this
element of today's lecture
then by placing them and setting the light characteristics yes
in optical perception

you can get
it's easier to get the projection part
in control for example in front of you
and very easy to see
how does the management work in general
from this or that section of the lecture material

's why when you mean
Well, you start doing this already at the logical phase
then your management begins to adapt more and more
to the permanent control element
even if you are there, well, like Consciousness
do not use something to control
Consciousness controls itself

i.e. such a level of glow of Consciousness arises
i.e. each element of Consciousness, for example, in front of you
well let's assume there were saints there they were shining
from the elements of the development of Consciousness
i.e. well, including in the optical range

Still, I say that we need to manage
as much as possible without being different
i.e. not to cause, for example, glow there on a physical level
at home

but then look here
when you do management of this kind
for example, by trying out options
and you remember how the glow occurs
then if the room is, let's say, darkened
then in principle you can see the glow

which comes from you only because
what do you remember that control is happening

i.e. when you are in the control phase
Here what is the difference, for example, control
managing Thinking
or for example just Thinking

what is the mechanism that leads to control
it can be objectified
including at the optical level of Perception

and rearrangement of optical components
leads to the same control

as I just said
the mechanism that is now reflected in this lecture
it allows you to act in principle very simply
by means of already appointive management

then now I well if I translate
in the language of the formalized
maybe even closer to the mathematical level
means management

i.e. solving the problem through mathematics there
for example first what could be the explanation
and then the blocks are simply formally used
here's how it works in management or programming

you can indicate the same here
in the control task
knowing this design that I mentioned
just by listening to it and understanding it better in essence
before practical application

so it's better to have Macrosalvation right away
then receiving private events

you can therefore focus
logical control plan
around the control center
in front of you
but based on today's lecture

for example you need to make control
there in personal events

or cure someone
or achieve some event
you can set this event
just draw it on a piece of paper
and denote it by the symbol A

around to mark other events
which from your point of view are necessary
in order to achieve this yes

i.e. to take some control actions
B symbol is there in the circle
then take into account some peripheral symbols, etc.

having designated several symbols
you give them a glow structure
already due to the fact that you simply can
mentally saturate each of the circles

and further
you are already tracking
further on it's just surveillance work

i.e. I'm not talking here
that you need to use some special product
like there is a pendulum to detect these lines
which go from each segment to each

it is always necessary if possible
use the Spiritual system
i.e. identification diagnostics
refers to identification by management purpose

i.e. to identify all the time
Is this information correct?
management objectives

so you build the control object in this way
that you kind of periodically illuminate
then one sphere, then another

and then when you succeed
spatial image
It's better to work without a piece of paper at all
and in the control space

you move these figures as far as possible until

while this element of Consciousness is being illuminated
by management objective

and once you have illuminated it optimally
there for a limited time
either use this design or leave it
or you can use it for other purposes there

let's assume there are existing areas there reconstruct
and get background Consciousness

do you already receive it?
background level of Consciousness
where are the control systems well no matter how obviously located
in the form of a design there
which, let's assume, a digital camera can record there
or these structures can be
Well, they were disassembled during external viewing

you will have to
in the elements of already background Consciousness
where you don't build structures
find
each management area
including own events

this is as an independent work

when you find
each managing section in itself
you will see
as your neighboring elements of Consciousness
connected

those. generally speaking factually or how
at the level of well, to touch so to speak
what does Consciousness consist of
from the point of view of the factuality of neighboring connections

so you made this management as if
and having received the background level
which is in front of you
in physical space, let's assume

you can take the space of Thinking
or Spiritual space
Soul space

control

then you can get
tissue perceived structure of Consciousness
and then you can see
how your Perception grows from the Soul

and synchronize Perception
With
development of the Soul
by management objective

so that means this is the goal of today's lecture
here at the end of this lecture
and this goal is visible from the very beginning
as I explained, yes, those flashlights
which shine towards each other

and you look where this goal is at the beginning

it means synchronization of Perception
with the development of the harmonious development of the Soul
in such a way that Perception means management
it was, well, let's say, intensified many times over
the controlling impulse of the Soul

i.e. simultaneous direct control level
and Perception and Soul
where Perception is
Well, it 's not really any different from the Soul
and at the same time have
logical control factor

so that's for today
I am finishing this lecture
If possible, practice with this lecture
repeatedly
moving for example everyday social macrofactor of management

and that means here it is transcription
which was mentioned there
management of any event
by self-regeneration
according to the Macrosalvation system

these factors are possibly somewhere here
well, let's sort it out

because I am in this lecture
Well, I mixed and moved
from one place to another

but as I explained
means the light-optical principle
it will allow you to level up
well, like direct Perception of the Spiritual or logical
clairvoyant so to speak
it will allow you to quickly understand the situation
by moving as if control units
and find the corresponding connections

i.e. you can find understanding
by what you can
mentally move these connections

in this case you will have
misunderstanding is conditional
and direct, i.e. factual
related to direct
with real control

so it's better to always do this
in relation to real objects of control
and not speculatively

Always work if possible
for a specific situation
and don't just do analysis
because analysis is a different management

so of course you can do some analysis
and apply this system for analysis
but then you will get exactly an analytical system
which has a multi-variant answer system

and for Perception, analysis is required again yes
maybe it's true already less
but this next iteration is an extra move

then, if possible, apply it immediately
to their practical affairs
well they might be there any creative work
connected as if with your practice or Macro level
or with the information system of Reality

a 10-15 minute break now
then I will answer questions

I start in the context of today's lecture
answer questions
in this case the lecture will be
in a more applied nature
and basically ninety percent or more
This application of today's lecture material will be
except that of course it will be used
certain materials from other lectures
or educational plans

so the question is this
tell me how can I determine in advance
Means *number of sessions required for treatment*
whereas sometimes the treatment goes as if in passing
we talked and everything goes away
up to cancerous tumors
sometimes you have to work long hours

so the situation here is as follows
that when applying control
to the goal of treatment
and options like, let's say, a high-speed treatment plan

First of all, you need to determine the target status
i.e. in the management sphere
to highlight, as it were, the inner subsphere
defining the target status of management

i.e. there is control, for example, by Macro-rescue
there is a control regarding that
what do you mean you make some situation
well let's say more rational more logical yes
second level of management
Well, you're always sort of refining it

the goal of Macrosalvation
this is, let's say, a fixed sphere
which is in front of you
on the site, well, let's say, on an infinitely remote site
of your Consciousness
and basically static

what you work
to improve current connections

they are one or the other
either spontaneous or prolonged
this is the second level

and when you work, well, as if by the way
i.e. you communicate and pass
including cancerous tumors
then there may be a trigger here
it just goes as usual
the objective function is here Well Saving everyone, for example

it works anyway
the principle of transferring your knowledge
and therefore the principle
Means Yes restoration of these people

and if it happens very quickly
it means they are just working as a rule
goals
or strategic
or tactical
and you can just watch
how does it happen
from the point of view of a system of diagnosing the situation

another question
when you are doing a target task
as for example Salvation there healing
and this task is as follows
what do you get for example
some factual information
preliminary about some problem
for example about a certain diagnosis
and then you start to carry out the treatment

Well, first of all, in this case
if in the first case it might not even be necessary
no special sessions yes
it could be an instant cure

if there is, then there is a problem
well, which may be there, for example, does not fit there
for the purpose of Macro Salvation
exactly what does instant healing mean

i.e. as a rule, those are cured quickly
who, well, kind of hits this target

second option
so you can in principle
even orient a person so that he gets there
i.e. add his education
by remote control

another question
that the goal is still the same
in any case, healing for all

i.e. when you are only in person
at the expense of your Consciousness you make a cure
there restoration of any
who, let's say, meets you on the way
or somewhere on the information appears

then the problem arises
in determining, well, the duration of treatment

and that's the main task
in determining the duration of treatment
so as I said
is a cure in any case
i.e. full recovery
under any combination of events for a given person

i.e. if it appeared for you, well, sort of on the horizon
i.e. for management purposes
then your task is to restore it in any case
let it be longer yes for example or let it be faster

and here's the duration
here the task of Macro-creation arises
i.e. this is what you need for that
so that a person can be restored in this way
so that everyone around would be the same
let's assume they are harmoniously oriented
restored to health, etc.

i.e. favourability related to all

then well first of all if possible
need to be restored
convey an educational element

i.e. to do so that the restoration
especially the restoration associated in this case

not at the expense of, let's say, the use ^{there}
any drugs, i.e. chemicals
this is what limited funds ^{mean yes}
which ^{in general} do not develop Consciousness

and due to the technology of Spiritual Management
and Spiritual management as everyone understands
this is direct control of the whole Reality
that in the conditions of technogenic development of society
maybe ^{generally speaking}
even by extrapolation
logical phase of reasoning
this is the only way for humanity to survive

when you can control yourself
and control any structure
because it is clear that technology
can be completely different
and then you have to manage completely
it may also be those technical properties
which have greater speed
in decision making

i.e. more complex ^{yes}
what the human brain can do, for ^{example}
per unit of time

then the structure of Spiritual Management arises
where the speed is still higher
any technically reproduced system
anyway, in principle, it's weaker
rather than a structure from the Creator
Well, for example, a person

then we have the principle
Well, I would explain it logically
that a person is still stronger in essence
but here we also need to show it ^{yes}

you have management status
for ^{example}, even when cured there
not some kind of simple diagnosis
which if possible
it needs to be conveyed as quickly as possible

therefore now the number of sessions
from the point of view of contact ^{with people}

it should be defined often
from the point of view of further knowledge

or you leave the literature
or you have some methodological systems
you pass on
if possible, well, there on your own
or through those students whom you taught

i.e. here is the principle of contact
in my opinion it should be like this

and then here is the healing process itself
in this case it doesn't matter
must meet minimum standards
on time in any case

i.e. the goal of any cure
is the minimization of time

therefore here it is
from the point of view of today's lecture
I have found out well enough
as if a small amount of constructive
in the form of optical spheres
which characterize
what is the scope of management objectives
cure

second sphere
this is always the minimum time in any case
whatever education you want to give
the goal should be to lay
exactly the minimum time
in Salvation of a specific person there or healing

and laying down in parallel
around this minimum time
set an educational task
taking into account the importance of the task

what exactly is direct control
this is the principle of real Salvation

then you get only a few spheres
means highlighting certain segments
each of these

each of these areas
you can even segment it
just saturate with your Consciousness

and watch
depending on this segment
how the main sphere glows
management objective

so let's assume they made such a highlight
and in the center of the management sphere
if this is a cure
it will be revealed, well, sort of radially
the radius will start, well, like a periscope in a submarine
it will start to come out
and it will turn out that you will determine then
so, well, well, then if we observe further
then it might even be a kind of breakaway
next sphere
characteristics of the future process

this is under direct control
related to the objective function
from you yes when you work more on ideology

and you will see there
there, for example, the number of , let's say, sessions
or the number of times you have to do it
namely the control action
let's assume for the cure

you can do this right away
Firstly, you can break it down into days
which you will consider yes

if you look more
well, kind of the opposite
i.e. defining strategic management
achieving the goal in any case
obviously in the future
and from there
defining the areas I have named

well, like a flashlight
which shines on the other side

then you can also determine there

these same days these same hours
they may coincide with those
with which you received control
well, kind of from myself
and they may differ

because when you do management
in the future
you're cutting everything anyway, you're already rationing it
by means of controlling clairvoyance
you immediately standardize

and therefore control from the future to the present
usually less time
well, that is, look as if with a flashlight
which looks and shines from the other side
from the future in this case

and then you get specific deadlines and actions
what do you need

at the moment of control the structure of Reality
changes
so having made one control
it is possible to strictly adhere to the scheme
and get into the system
when in this scheme
you get control of exactly this nature
but it is better to allow the system to develop itself
and speed up anyway

i.e. at each iteration
if you come back to this control again
then speed up
if possible, it is better to manage as if
Well as if by a single impulse on the Macro level

i.e. it is possible to work on all requests
at a time

i.e. you can give the data
and manage any number of requests, generally speaking
the meaning of true such sustainable development
when everyone can do
one kind of management job
positive ahead of everyone

or as if for each

then the system is indestructible
each subsequent member
increases the resilience of the entire society

and it turns out that's the principle when you are being addressed
with completely different diagnoses
and you manage this principle often
in many ways it can look almost like this

that many of those who turned
they received help
when you don't need to be distracted
as if at a private level of Consciousness
and how to activate it specifically

and another question
that some things need to be specially disassembled
even if in general sometimes it would seem completely small there
concerning cellular composition
or one cell specifically
can be in the current time of a healthy person

then you should
this is to analyze and apply
conventional control system

i.e. here in management
which characterizes management
aimed at a large

Well let's say so an infinite number of people
in conditions of endless development

Means there are all those in the future who can contact you there, for example
and you must help them
here it develops mainly into a Spiritual state

and then this is a Spiritual state
for example, it can also be any state
may be periodic
it can be permanent for example
and if for some time

and most importantly
here is the principle of complete free will
how's yours
and for example those around you

this is the principle he will show then
how many, well , peculiar sessions or something
such spiritual states
need to do it for example at the current time yes

you can do this, well maybe not every day
and maybe several times a day, i.e.
or there several times in a minute

now if possible
do such a training then
all people have tasks
which are in the hall
and those who will watch yes
data for example records

make management
to help these people
at the level of Spiritual states

Spiritual state heals and helps
your spiritual state

and I'll watch

here in the context of that practice
which you are currently implementing
the following characteristics arise immediately
which should be added
directly to your control
and many do it right away
but it's better to know it in words

so it is desirable here
determine the place and time
Spiritual state
in the information space

i.e. when you are addressed
this is the space of information
from the point of view of Consciousness
and there are people there who either have problems or are sick
or even some catastrophic ones
let's assume that processes are taking place
either in the current time
or they may be in the future

It would be better if it didn't happen, but in the future , somehow
we must not allow this information to be recorded

and then you should
first show
what help can you provide
you can even see where it is
do proactive management

and then you can
somewhere in space, even physical, around you
or you can just work
in the information space here
where there is no physical space

just like in one of my works
I indicated that there is, for example, movement
how is the time of movement

i.e. you can enter the time of the spiritual state
which is not determined by hours
but you know that this is for example time yes
from the point of view of associative generalized connections

that's on the physical level
that would be called time

and therefore from the point of view of information space
this is the accuracy of events in a given place
for example, information spaces
where exactly do you provide assistance

and place
the place can be physical but not always

physical location
if we look at an optical model for example
then it is limited in that
what when if you start helping here
you can then shine very strongly

a real physical strong glow occurs
which means well , some kind of, including
a certain kind of well let's say energy
which even has the ability
there increase the temperature, etc. there locally

then you need
to provide assistance in this way
so that well as if locally
do not overload the physical space

in the information space

this space is close
to the space of Thinking
but this is not the space of Thinking as such

information space
it has, let's say, more general characteristics
and at the same time more controlled by the Soul

a space that is more controlled by the Soul

logically it is clear
but there is such an angle here
that Perception is only a part
spaces of all information
and here is the whole space of information of Perception
you can assign

say that here in Perception
this is the sphere
this is the entire space of information

then you can unpack
and you will get the same thing
i.e. identification

and looking from here
you can see real events
in real time now for example

one of the elements of controlling clairvoyance
I showed it now

when you for example well you get more
as if Spiritual vision
what I called controlling clairvoyance

i.e. in real time
know what is happening in Reality

then Perception of the current Reality

this is direct control
due to the tension of the Spiritual state

i.e. I entered this characteristic
as the tension of the Spiritual state
but not designated, for example, by criteria

i.e. you feel and realize
only tension
caused by a specific situation
and increasing tensions
in this situation let's assume you extinguish

at the same time your Spiritual state
not indicated by, for example, a verbal phase

you say in this case don't say
what is it like there It's so calm there, for example
may be expressed by some memory
and it may not be related to any action

Well let's assume when a person
does heavy physical work
he can't always be in one state
compare with another state there
related to the same physical work

physical work can be different

at the moment she seems to be the same
but the time here is different

the same
physical tension
how exactly then physical condition
because you feel it in physics, i.e. in cells

some cells start working
in a slower mode, as it were
and here from the point of view of self-regeneration
It is important to look at the cells
which have

Well as an infinite status of archiving information

when you look at your cage
and you will work through the cage
you will transfer to the logical phase

i.e. the cellular organic physical system of man
allows you not to maintain a zone of tension
i.e. do not make statics of general development
a stable system

development must be dynamic

and it turns out
that the maximum manifestation of development dynamics
in a person, i.e. in the physical body of a person

based on this logic you can observe
to practice
and see for yourself
that this is how it is

and that's when you, for example, with this approach
determine the amount of time
that from today's lecture
that's where I entered
control via timeless component
control can only come from the goal

i.e. time and quantity
this is an event structure

and in this case
to achieve control in any case
this is a special type of control
when you set only the goal of management
and that's all

as if outside the purpose of management
there are no events
and there are no intermediate actions

then you see for sure
that the management is stable

basically on a physical level
you can come back to it there periodically
or maybe it will be a one time action only

but at the same time you know for sure
that every time
it is not meant as a temporary time
and each time is like a Spiritual time

you achieve your goal

but how many of these times can there be?
and how many Spiritual states are there then
states of the Soul
you must pass
this is already a conversation here, well, more conceptually
it's about your development
or about your target

this is the purpose of management
do you have it now?
how do you define your development now
and this is just a state of development in fact
where is the element of your development
is to achieve the result
for example, according to the management goal, let's assume healing

then it turns out
that having already cured a person
one case is enough, here it is
interesting and informative in itself

there was an incident once in the mountains
I cured the boy
from some kind of not very complicated intestinal infection
quite a long time ago in the early 90s

cured him pretty quickly
and it was all as if forgotten that same day there
parents and them
who's there Well there I invited them myself

and after that I have many times
this situation was being played out
sometimes well I generally spend quite a lot of time there
So let's say I was even doing it for a few minutes
under voltage somewhere let's say 5 years have passed

I was doing the analysis
firstly, his condition, i.e. I still led him
but generally speaking here's news about who you're seeing for treatment
all the time, well, periodically, somehow monitor
it will still hang in the information
Well as if for you

i.e. the final level of removal from control

with Eternal development as such there is no
there arises the principle of responsibility
Well as if into an infinite future
This is roughly how it is expressed
at the level here as if elements of distant Consciousness

and in the series of events this is expressed in the fact that
that you periodically seem to add
system
again according to their even previous tasks
depending on the next level of development

and just look at this one carefully
this example is there
I then periodically, here he is somehow
well what do you mean arose
I just did it on purpose
this control
and I would add something else
long enough for many more years

although I saw it once
then I left this recreational base
and I never met that boy again

but then for many more years
I added a kind of control element
Well, somewhere there is very intense tension
it can be so informative
somewhere around the age of seven, then
in actions even in those past

it turns out that on a physical level
I cured him, there were no problems
but in reality it would seem that already having such
there are load tasks there
on Macroregulation
for diagnostics of the same nuclear power plants

I still made time
sometimes there is even more than diagnostics
let's assume the same nuclear power plant
to convey this information
while as if in that control system

so from the point of view
this is even this specific practice that I spoke about

you can watch it
here the concept is precisely "quantity"
it is not even determined by the result, so to speak

the question is in that case the result was very fast
literally there in a few minutes
I just took my temperature there
I restored my bowel function

in accordance with this
I think what's more important here
always synchronize or always consider
this is why you need an analysis of this or that situation
or adding to a particular situation
any information
how many times yes For example
and generally speaking what time is it

that's why I think
what is this other than the answer by quantity
which, generally speaking, as I said
can be recalculated
definition of management objectives
suppose according to Macrosalvation
says what is needed
This is especially true for your personal practice.
perhaps even to return again
add some control level
again, as if into the past

and then it turns out
that the quantity here already depends on that
when you well there for myself personally
or for the purpose of Macrosalvation
you won't resolve the situation

in this regard, if possible, well as if for that
so that means to develop a certain mechanism or something
control and development
Sometimes such situations seem to be long-term

you can do
peculiar well like a level or something
promising like this as if control
for the main elements

based on today's lecture

well what is your management goal
taking the total level of all management
well, which you kind of perceived on a physical level
or did it there at the informational level

you can do it
Well, let's say in a combination of events
in the form of a certain shape there
generalized close to the sphere, let's assume
means put in the middle
these two
as i explained flashlights yes

i.e. glow from you and to you

from the point of view of technology of today's lecture
and you can see it included here
and future events, all of them

then let's take a look
what could possibly be wrong with you
better to do it now
to remove a lot of questions
and then to them well how not to come back
by activating the logical phase of Consciousness there, for example

and not necessarily only logical
including the Spiritual

i.e. how to optimize
managing the situation or something
related to that
that you can have all your information
here's another way to look at it
Well as if in such
logically interpreted version, perhaps
in the optical range
and identify the main tasks
which in principle can be

and work with them immediately

then due to this you can optimize
and how to save or at least minimize
number of requests
which can be done later
well, direct it to some other things, i.e.

naturally new cases ^{mean} they speak about that
that it is possible to make such a generalized analysis again
generalized control
apply with development
systemic ^{as it were here are} the systematizing connections

this is from the point of view of the practice of today's lecture
I think it's useful to do this

so next question
Means *tell me*
how to work with eye diseases

Means Well first of all
I'm from the point of view of today's lecture
I can answer specifically about working with eye diseases
as follows

from the point of view of the event optical picture
which I said about
from a work perspective
from you and to you
under optical illumination
it is possible to develop two control centers
correlated with each eye

and the task then is in management
is the synchronization of events
these two centers
in one, ^{as it were,} common center
i.e. well for example, in front of me on this task

I put the ^{sphere}
the left eye is closer to me
right next
^{sphere there for example,} with a radius of 15 centimeters
two spheres
the distance between them is 50 centimeters

and I need
so that the events of the two spheres
what can be an event for the eye
^{yes} Perception of an image ^{for example}
of the same image

I set a task
here is a video camera

I set, I model, I set a modeling task
that both eyes should
see the same thing at the same time
video camera segment

and I look into the control structure from these eyes
which is projected but closer to the floor
if it is horizontal level yes

at a distance of 50 centimeters from the floor
control point
these two processes

and I'm just her
or I activate it, as if pulling it down
or I adjust it horizontally there
I find the position

it's basically immediately visible
the question of location is that
so as not to force it
don't make control discrete
i.e. not to increase the shock wave of Reality
and move forward calmly without resistance
this is management

I made this control
and the glow begins
i.e. optical section of two spheres
which are related to the eyes

I'm like, well, again let's assume due to his clairvoyance there
you can do this with Spiritual Scanning
I'm checking
do eyes really see the same thing
element of a video camera, for example, near the lens

and then
as soon as I diagnose it
I see the corresponding glow
I say that I made a control element
for the treatment of eye disease

so in this case the logical status
that synchronization is logically embedded
management
from the eyes

i.e. the eyes can move synchronously
see the same object yes
I took one element of synchronization
the same image

and the second introduced the control system
which acts simultaneously
i.e. takes on the management function
by the main status of the eyes
simultaneous action
like any parallel organ

it can also be treated
any parallel organ
Well For example there are kidneys etc.

or is it for example hands or fingers yes

any parallel systems
sometimes it's easier to treat
due to one control point
these two systems

and when did you make such a management
then you got the corresponding level
First of all, sustainability
plus recovery

while you can scan
each specific eye
for example, look at the left one there
for example, the capillary system of the cell
look at the interaction with the brain there
watch the speed of signal transmission

and do synchronization for each element

When
for example, if the left eye is slow
signal coming from the eyes to the brain

and this is a specific level
neural connections
you can see where the neuron is pinched

it's just immediately obvious
in the space in front of you

i.e. with this approach
is revealed to you
including mechanical level
you can go down to the atomic level
enter information
and analyze
what is actually happening

then you can restore
not working well there with the left eye
but just relying on
to the control point I mentioned
common control point
which is related
generally speaking with the right well for example with that eye
where is this connection normal

then you just say so
having established a normal connection
and having a concentration of Spiritual Consciousness

pay attention Spiritual Consciousness
you get Norma here
where the signal is slow

i.e. you do nothing
other than what you use
as if the working mechanism of the other eye

and therefore this level of well comparability
it works like that, you don't care
you have to get the information somewhere

to obtain information about the function of the eye
you can log in
of course just information
as if it exists on its own
It's clear

but you can do it right away
this is a different management principle
which is not connected to the system

in this case
as if here are lanterns shining towards each other

in this system you can make an analysis

i.e. analysis

I am specifically describing the analysis

of course you can
just make a control impulse
and get yes, for example, the same thing

but to take information
you can view all the functions of the body
and identify well as if the only connection
for this you will have to
do many iterations

but if you know
what does synchronous systems mean
allow you to self-recover, so to speak
on the terms of existence
parallel to a healthy organ
then it just simplifies management
and additionally adds one more method like this let's say

i.e. if the method is expanded
then it turns out
having only two cells
you can collect the whole organism

means because
that they are self-developing by the control system
and that's why you can collect

from the point of view of information arrangement

and from this point of view
In one of the lectures I asked a question
here is the structure of the world
in relation to a man and a woman
Here how would you look at this question this way

how to make infinite development
if there is for example Well as if a starting position
in the information that there are two objects
create Eternal and Infinite Reality

naturally you can
go deeper and see
as from one object yes

then we'll get back to that
who created this object
i.e. to the Creator

so the next question is like this
how to work with prolapsed organs

Well, the thing is
that physiologically so let's say prolapsed organs
or informative
which may have
not the same physiological status in the future

these organs
Well, from the point of view of the system
which I talked about today
they are more
so it's possible to restore it in this way
what if you have
Here For example well, whole, integrity, yes
from the point of view of integrity as an organism

that concept of "omission"
or is there some kind of irregularity there ?
in this case, physical prolapse
what we are talking about here is precisely omission
to the side, let's say, down vertically

can be considered
how so as if a characteristic
which differs from the Norm in that
what first of all
if we consider the vertical system again
which I talked about today
as if a vertical plane
then this means this vertical plane
characterizing a certain problem
may be restructured
by means of impulses such as peculiar
radial connections

i.e. you are simply above the physical level of the lowered organs
Well, first of all, it's better to do the following actions
by the elements of the same
two areas of management

what comes from you

this is the whole normal organism
informatively normal

i.e. what is meant in this case
that you don't have a canonical level
as such
in terms of like this, for example for two eyes yes

it means you're just watching
from the point of view of the informative canonical system
Well, it could be a human atlas.
or just human health information

this is the sphere of man
and on the other hand
information that characterizes
here is an organ as if lowered yes or lowered organs
so it's also a certain sphere

in the first case it is
well, a kind of semi-transparent person
otherwise
this is a sphere that characterizes the Norm

and the difference
you are just nothing
take from that sphere
remove the structure of difference
it is done mechanically

i.e. it is removed from the sphere
information corresponding to the distinction
is brought out into this vertical plane
and at a great distance it is as if placed
from event level
Norm

the sphere is inserted inside this person
and just fills it inside
that's all

the only option to enter this sphere
this can be entered
For example well, having found it in the spine, well, in the spine area
entry points
let's assume it's the lumbar region physically

i.e. the main thing is to find how
this case it is specific
entrance

if we are talking about
about non-compliance with physical parameters
there is a geometric location
entrance of this sphere
precisely from the side
lumbar spine

if you want to restore
For example Well, psychological and personality status
then you can build the same sphere
just enter

can this sphere be introduced
already norms
enter from the side well as if the back of the head
exactly from the side as from behind there skull
right where the back of the head is
well, where is the cerebellum ?

here from the cerebellum side
enter this sphere
and then you have
normalized psychological status

from the point of view of psychology and management it is so let's say Yes
psychology of interpersonal relations
management should be like this
so that the person in relation to whom
management is carried out
agreed

i.e. even if someone, for example, asks
there to make management for someone and he doesn't know
you need to find the level of entry that a person accepts
i.e. he agrees

that's why the person I described here
means dots well which ones
it means for the system there is normal human development
they are quite versatile

i.e. to say
that through the points for this purpose
the person will not agree

well in this case
so besides working with prolapsed organs

why did i enter the parameter
like, well, normalization of psychological status

because any non-standardization
changes psychological
context of personality development
especially if they are geometrically shifted yes
organs even inside

so it's like a second control element
this is the control system
for peripheral events
after healing

and when you do management for example
then you don't have to enter there
according to the target levels designated here, universal yes For example
although they can always be used

another question
that you can just move this sphere around
view a person's consent status
and then pass it on

it can be any entry point
in relation to a person

so it means you can do the restoration
at someone's request or without any request at all
if you yourself consider it necessary
you can restore anyone
because there is a general status of general creative development
and you have the right to make a decision here
in any context
namely the restoration of the creative

so the main thing here is to determine
how to make it so that at that level at the information level
there was consent from the one you are restoring

and you can always do this
and often in a fairly short time
based on the ideology of the Creator
Eternal creative development

login paths for recovery
always open

i.e. there are usually no special problems there
even in cases where a person is, as it were, on a physical level
Well, somewhere it may not manifest itself correctly

i.e. let's assume a person doesn't think
what needs to be restored
and yet here is someone for him
or asks or you think

then this person
there are still open systems

because basically
the very structure of man is such
that's what he's set up for on the development from the Creator specifically
and is set for life, and for Eternal life in essence

so it's obvious
inputs to restore anyone's inputs
they are always open

and therefore when often
For example, one person is being restored
Well there are many well there for example, many senses
who is engaged in Spiritual management practices

then it's always even better
because as a rule there is no intersection
because the personal identification system
even being in different places
this is already a different entry channel

but the more creative elements
the better it is, the more attached

so when for example questions arise
related to that
what if there is treatment happening somewhere
For example there is sensory spiritual healing
is there anything else that can be attached

Well, as a rule, even a desire to help
leads to a positive level
and even more so the technological level

as a rule, this can always be done

and in general in the concept of Eternal development
this is universal help for everyone and everyone
i.e. everyone to everyone
it is still one of the elements of sustainable development

so to speak
let's assume that someone is in something
maybe we need to limit it
I don't think it's appropriate

in this case
so the question concerns *the treatment of the spine*
one more question

and I think that here
so to answer this question
I'm just suggesting that we conduct a kind of practice
related to that
what when you for example Well, let 's start
apply the technology of today's lecture
in general just listened to yes let's say
when you didn't read there didn't listen

technology here is the restoration of the spine
it should be exactly the same
as if you had already read
or listened to this lecture

i.e. there is a specific goal
what is a request means to teach how to treat the spine

and in connection with this
you must carry out management
now with me and teach
in this case, to teach means to cure

when did you carry out this management
do it right there now For example there
well, in a matter of milliseconds
to do this quickly
right in front of me in space
at a distance of one and a half meters
for example, in a sphere with a radius of 10 centimeters, a small sphere

Increase your Consciousness

and made it certain there
each in their own way

when you listen to the lecture
or add lectures later
the controls should not be different

i.e. management efficiency
should not be lower

please check if possible
development of the Spiritual component
in your access element
given that
that there shouldn't be any management here
lower in speed
and should not differ

that's why
as an independent work
you do this control

and here is the important question
that a catastrophe on the level of a terrorist attack happened there
in New York on skyscrapers

carry out management of this type now
for society to mature
to the adoption of the technology of Spiritual Management
so that it would accept
and preliminarily installed some kind of sensors there
or how it would orient people towards such management
so that disasters don't happen at all
first element

and the second parallel element
sometimes it's the main one
from the point of view of treatment and recovery of those people
who got into the accident

this is direct help
thanks to today's lecture

in any case, a direct adequate reaction
this is the primary action
but it means that it is necessary to always add it to the information
based on the practice of existing Reality

what people need to understand
that the technologies of direct Spiritual control
if possible, it should be implemented everywhere

then well, things like a plane flying over there
completely out of control
that means without any stops within New York City
and then these other planes hit skyscrapers
such things
with correct and multi-level Spiritual management
they may no longer pass

i.e. the goal of any systemic development
it still is
not to allow even a local disaster

work if possible
except that basically
the purpose of the first part of the lecture, for example
prevention of possible macro-disasters

and still work on the system
when not allowed
any local disasters
based on today's training
for example, bioptic systems

and see
what and not to look at all, just say
but to actually provide assistance
current for example Here well in that situation
which just happened in New York

Well , that's it
I'm finishing the lecture today

thank you for your attention
