

GRIGORY GRABOVOY
Structuring of Consciousness
**Using the Pre-Control Factor in Consciousness
for the implementation of the Salvation Administration**
(10)
06.09.2001

Good afternoon
in today's lecture
according to my system of Salvation and harmonious development
I show event management technology
based on that
that when Consciousness is oriented towards control
then there is a pre-controlling factor in Consciousness

and the talk will be about that
how to use this factor
in order to implement
Salvation Management

i.e. it stands out
pre-control space
and this space is therefore used
as a control active space

for control technology
related to Macrosalvation
this space stands out as an environment
which is located
near the selected segment of Consciousness

i.e. the goal of Consciousness is what is defined
the goal of management is clear
and here for Macrosalvation
this is external
in relation to this area
Wednesday

and control through it
occurs through immersion
as if into the inner layer of this spatial system
and control always comes from within

this is for the macro rescue system
by access for Macrocontrol

i.e. in practice it looks like this
stands out
the purpose of management is any
then either this is a treatment
or event management in general

and based on this goal
so you highlight the sphere
It is better to highlight in this case
namely a fairly smooth, so to speak, sphere
in principle any radius

once you have selected the sphere
then the control is carried out as follows
what do you introduce into this sphere
content of control target
and once you have entered the content
in the form of well maybe it looks like
from the point of view of optical imaging
to a kind of steam , so to speak
which fills the selected sphere

and it will be called
information management objectives
some kind of inner glow
enter into this sphere

and then as soon as you entered
instantly organized
this is the pre-control space

it is in the form of some
also a vaporous, so to speak, shell
at the optical level of visualization
around the sphere
and has a thickness
approximately half the radius of this sphere

in this case this component
on optical visualization again
it means it is not defined within strict boundaries

i.e. it is located quite randomly

and this is precisely the component
this is the pre-control area

i.e. we are talking about the goal of management
when the control area
in this case it is highlighted
as an area of Macromanagement

and the control here is as follows
what to activate
internal level of management
i.e. activate
as if the content of the inner sphere
and achieve this content
at the level
or physical
or informational

you do the management like this
you enter
in the form of, for example, axial control
i.e. you create a line or segment of control
best of all from the level of your physical body
enter
this layer above the sphere
this segment is light-optical, so to speak
and this segment is activated
precisely inside the outer layer, so to speak
namely the areas of pre-control

and it is activated
precisely the meaning of this same management
or simply Spiritual impulse
which simply activates the content
internal
internal contents of the sphere
management objectives

it means activation means internal content
areas of management objectives
this means that you are inside this sphere
must discover
implementation of an event taking into account the Macro-connection

i.e. it is precisely the detection of the implementation
must occur within this sphere

as opposed to a certain type of lecture
where is the detection
this is a fairly multifaceted factor
and you can diagnose the event
that it happened
well, or implementation at the physical level
or on the information

in this case
information implementation
should happen
it is within this sphere

i.e. diagnostic system
should happen
It is within this sphere that the goals of management are

then you work according to the system of Macro-connections
where the level of Macrosalvation is taken into account
with pre-control level

so now I will explain in more detail here
it is the level of pre-control

i.e. when you do any control
or solve some problem
do you make a decision at all?
naturally, everyone intuitively or logically
the preceding region is highlighted
logically it can be
in the form of cause-and-effect relationships of events
indicating that in this area
so there is some kind of prehistory
and then the control information
she can be
or material
or informational
and in principle it is largely understandable and well-known

if for example a decision is made
on the composition of some new control systems
that's pre-control
may be an undefined area

since there is no background in management, for example
then this structure

it is defined in Consciousness
as a point of compression of Consciousness
compression of , say, information of Consciousness

and here is this point
where Consciousness is constantly
well, it kind of shrinks and retracts
into one point system
a peculiar drain
this is the drain element
if so, how to speak in the language of physics
where there is no let's say prehistory yes

when we have a prehistory
i.e. the optical elements are known
which are declared as logical structures
or structures of the past or even the future

i.e. you can see with clairvoyance
and see the future
then it turns out that this is already a known system

and that means these volumes that are known
make them Conscious
if infinite

i.e. you can take
and with Consciousness to increase them in volume so much
that they will be infinite in each element
or in principle infinite
from the point of view of Perception

and connect this system to the drain
which I said about
i.e. with the point of constriction of the elements of Consciousness

then we will get exactly
this is the pre-control area
in the form of a kind of unique composition
two control elements

it turns out that pre-control
contains logically clear
as an area that has no history
and the one that has

which does not have
this is a point drain of all information to one point
as if infinite compression element of information
and therefore the logical level
this infinite expansion of information is actually

i.e. on compression and expansion of information
you have that system
which organizes the following events in fact

i.e. pre-control element
this is what you organize management on

but somehow in order to organize management
so we use this system
or the element of Consciousness
related to the control system
i.e. what is before management

and so as you should within the framework of management
manage any system
which we will call in this case
as a system means being before control

then we see that to the same system
applies and can be included in this
elements of the physical body

i.e. some cells of the physical body
can be attributed to the system
which is located before the control

and when you
you begin to consider these elements
as elements identified
so let's say with the future event
i.e. the development of the physical body into the future

then the control elements
these are the elements
which create precisely the Eternity of the body
in conditions of endless development
or even an infinite goal of development

in this case as homework
look if you set a task

endless goal of development
then the control elements
organize this system

because the pre-control is there
where control has not yet been implemented

and that means when you are in Consciousness
select this area
then the second level of this lecture
it is a self-regenerating system
subject to external harmonious development
consists here in that
what do you find means in your body
it's better to find a local group of cells
which is organized
means infinite level of control
from the single level
such so to speak physically existing cells
but which relate to the area of pre-management

i.e. if your personal information
where for example body information exists
decision making information
as information let's say personality yes
makes a decision on a task

then specific cells are allocated for that
for these tasks to exist
before you make a decision
i.e. as if in the past
and they would also be implemented in the future

i.e. you organize
point of the present point of the current
i.e. the point of the body actually
if in material terms
personally, for example, my body

when you organize a point
for example, your body
then you can do the same, generally speaking and treat
is no other person there
restore or resurrect
due to the fact that the areas
which are not indicated in the information

Well, according to the logical scheme, as the controls
they can be made ^{eternally} recoverable
or Eternally regenerating
i.e. generally speaking, eternally existing

if the goal
when you watch it as homework
what when the goal of management
in this case it is already implemented as a mechanism
in infinite control

then you will see that it is like a sphere of control
the target area of management that I mentioned at the beginning
it contains all the events of the world
just like this external pre-control system
contains each event, ^{well, as if} discretely
torn apart from each other
in this case the event

those. pre-control
a system of discrete and disconnected connections
^{and} in this context of management
and when you are one of the few
i.e. you can get into disconnected connections
in global space management
what is happening in this case

then you see that the control system
She harmoniously, ^{well, sort of} closed herself off
a ring of harmonious development was formed

that any management comes
^{well, like} back or direct wave
to oneself in terms of knowledge
you get what is called a ring development
it is known enough by Spiritual feeling

because when you study
any science any subject
then you eventually come to that
that you get the feeling that
that it is understood
what you studied ^{for example yes}
a certain degree of understanding

if you look at the optics

this system of understanding
generally speaking
ring-shaped structure

and when does this system develop?
that is from the question you formulated
and it can be on the optics
let's say in front of you in front of your physical body
somewhere
this question develops on a ring-shaped level
and comes with an answer to the same starting point
this is the so-called ring-shaped system of development of Consciousness

This system of Consciousness development is very easy to learn
Here from the pre-control area technology
i.e. from the area where management has not yet been implemented

and in connection with this
because you need to do the management
virtually any element of Reality
including the element of Reality
which existed before the administration

then you must control this
do exactly as I said
from the meaning of the level located inside the area
inside space means
which is called pre-control

the logical meaning of this is quite clear
because if you talk
about managing, for example, any event
from any point in the space of Thinking
or there are spaces of Consciousness in general
or Spiritual space
or control from the Soul

then if we do management
we must from the system of general connections
generally speaking, get it via the feedback system
each single connection

i.e. besides what we have to do
from a private system, i.e. from one point
get
any common connection

and get control

we still have to do more
be able to do the reverse process
from a common connection
get
something individual

in this case the concept of "reverse process"
this is also a rather conditional thing
at the level of Perception

because it is possible
for example, consider the process like this
that obtaining from the private to the general
this is the reverse process
to a more logical process

and this is the level of purpose
i.e. when you appoint, then you
Well, basically you get it
it is precisely the management of that level
from which you assign

in this regard when you do management
this is exactly the destination
here is the destination level
this is the defining point
vector of your development

i.e. either you
from the particular you get the general
either you
from the general you get the particular
control

but in both cases
you must definitely
always get specifics
i.e. a specific control factor
i.e. why do you manage?

what level of management for example
maybe so to speak decisive
and additionally you should receive an answer
so what control system

is a promising prospect for you
as if in the next step of management

and at the same time get something else
mechanism for implementing control
at each step, i.e. at each iteration

due to this
this is the system of pre-control
which I said about
it is also useful because you have it there
at one point
generally speaking, a solution to a complex of issues

and this is the solution to a complex of issues
is that you can
to the pre-control area
set any tasks, generally speaking

i.e., precisely creative management
let's assume that this is a kind of so to speak locomotive
having placed on which the goal of management
this goal will still be crossed
into the control system

because
this is the sphere that I said
exists as a management goal

this is essentially when you look
at the level of, for example, Spiritual Diagnostics
then this is a system of actually implementing the goal of pre-management

because pre-control
it is clear from the word "pre-control"
that it is an integral part of management

component part
a certain stage of management so to speak yes
can all this be put into a logical diagram

it turns out that pre-control
it all comes down to position
namely, achieving the target level of management

and as an independent work

if possible right now right here in front of me
then make a translation
outer shell of the control
inserting a logic diagram
that pre-control is only one part
the entire logical chain of control
where the goal of management is the sphere

and right in front of me now take and translate
i.e., well, for example, at a distance of two meters from me
the sphere of the target level of management is located
radius of 20 centimeters
there is information about the control target
and accordingly it turns out to be 10 centimeters
there is a certain layer
unique pre-control information

everyone should now
take and transfer the control
into the control system
by logical iterations

and at the same time the goal of management
is the personal goal of each
and accordingly it is necessary to take
goals of those present in the hall
or in the World in general

i.e. choose any goal at all
any from the past or from the future

and do it now in front of me

in the end you have to
each for himself
get some figure for Perception

i.e. everyone should receive, generally speaking figure
which would say that
your task is completed

i.e. it is a figure
which is informative
and it carries information
that you have completed the task
they did exactly that

i.e. you got what you wanted
in management

it will only take
It may take several seconds
but it can sometimes take a long time
there for example watch
here in this technology

if possible, do it now
as quickly as possible
for example up to a minute
and I'll watch

when you work on management
take your time if possible
i.e. it can be done quickly
but at the same time so that there is no information rush

if information arises
restructure this information

as a result, the task of each person who identified
I looked at it like this, in principle, the spheres have been identified
according to the fundamental elements, let's say

everyone's task is
get area
which expands infinitely

i.e. to get that glow
in the same area I mentioned
for example, two meters in front of me
get area
which expands infinitely

i.e. creates an infinite amount of matter
from itself as if
this matter is diverging
in any environment of the world in any systems

then this needs to be done immediately
during the course of the lecture

i.e. I said you did it right away

when did you get such an element of matter
look carefully
that it is enough to take
mechanically transfer
for example, into some organ or some cell
which, for example, are somehow modified or affected
and tissue regeneration begins

i.e. as soon as you create
endless source of information
the information content of which can in principle be arbitrary
either this is a cure or this is, for example, a resurrection
or is it event creation

then you get it instantly
a kind of building block
in order to make target management

i.e. in this case target management
is that you are just
you give a unique source of the event needed
in the form of a localized mechanical spatial system
well, in a mechanistic sense

This system is located
in a specific physical location
you did the transfer and got control

when the Creator creates Reality
It also creates plots
which exist
before the emergence of Reality

and that's when we talk about such systems
then this is the system
what does Reality come from

the presence of the Creator here lies
in the process of development
from what you perceive

Be careful here
i.e. I show the presence of the Creator
in your development
i.e. He is present where you develop
having for example this structure in cognition

which I said about

due to this
when we talk about the process of activity
for example, according to management structures
as the Creator does
you must have some elements of presence
objectify as much as possible

this is where He is specifically present
i.e. your direct action is contact with the Creator
in this case

and when you get well such as how to say
established contact with the Creator
you can naturally
in this area of the dynamics of its development
make those structures
which the Creator himself initially makes

i.e. it turns out that in action you do the same

and when you do the same
then in principle you can very quickly
do quite a lot

i.e. well, generally speaking, that's how much
how much is needed even

for the Rescue system
it always comes down to that
what exactly are you doing here is very clear

therefore precision in technology means development
in Salvation technologies
this is a mandatory action
act as the Creator

i.e. to act like this, for example by the shown element
and logically
and objectively
for example, synchronously and clearly
objectified clear

i.e. you must have channels of understanding
what is the principle of objectification of your actions, for example

because I give technology
which should work
and it should work anyway
even in those cases when you have
any external information
whom you have not met before

then the main element in your development
is
be able to diagnose a situation
on the objectification of development

and ideologically understandable
when the goal of Eternal development is set
and for example, the corresponding technologies are being brought in
this is right

another question
that when you work on control technology
then this is the correctness
it consists of the following
what do you identify first?
point of organization of matter if possible

well, more or less as I said
or exactly like that, generally speaking
try to find your level
but then it needs to be objectified
that this is precisely the point of organization of matter

and the second thing is that
in action you must see the Creator
in action

any action when you see the Creator
there is a principle of optical reflection
then you are doing it right

these are two elements
which exist in development yes

Well, let's say we make this analogy
if some space
there are astronauts who move in space
then it's clear to them
what if there is an indication of space and environment

let's assume **VACUUM**
then you can move there
if there are no obstacles, such as meteorites

here the analogy is about the same
dynamics of movement
must be accompanied by clear systems

and a clear system is an organization
point of organization of matter
and appropriate support in the development dynamics
accompaniment from the Creator, i.e.

and that's why I showed two elements now
and he repeated it in approximately the same way a second time

please take a look if possible
at the moment of the second repetition
what is the difference
as homework

for example, I said it for the first time
the second time the information was different
it was modified
because all external connections have changed

having received the information now
you transmit them instantly
in all systems of the World in fact

and now you need to determine
from where you transmit to all systems of the World

and when I spoke the second time
what's the difference

what is the prolongation
and by analogy, if possible
Each person finds something for themselves
points of development objectification
or objectification of action

i.e. when you find them for yourself
well let's assume for some period even yes
you can consider

that these points for example work yes
you get a specific
and implemented practice

but in fact the control points, so to speak, of action
they might be different next time
like any management
here we need to take into account

what might be needed
some kind of modification in development

if the astronaut, let's say so formally
the number of features is limited
in physical space
it is not limited in management

in this regard, this element in management
maybe a little different
after some time

those. this is where you don't need to do it anyway
a completely static system
as if logically fixed

and it is impossible, for example, to consider that this system
must work constantly

although in management
there is always such a meaning
that any appeal
to any known level of control
should always lead to implementation

and at the same time
you have to build the next level of management
for that you must develop

here is the goal of the next level
often they do it just for that reason
so that there is synchronous development
due to the fact that all external connections are changing

as the information changes
all over the world
then naturally if you do it

always the same
on Consciousness
you will already be distant
from the level of direct control
for example, the center of events , well, some level of events

and that's why this element
change management rethink
and introduce new elements
This is related to the fact that
that you then develop synchronously
i.e. either at the same time or ahead
better to get ahead

when you are ahead
you ^{mean} you enter your control components
then the management is easier for you

but for this you sometimes need to work
for example at high speed

With practice it ^{actually} becomes natural
and for many of the students
this happened a long time ago
so the management in this case
consists in the fact that
that sometimes you have to draw a line logically
status ^{for example} of own development
or self-development status
and the development status of others

so if we select here
a system of general connections, ^{for example}
^{well,} any events in the world
something is happening in the world
as i said as homework
you will find
where
you go to all events of the world

and as soon as you, ^{for example,} see these events
as a system of common connections
on the optics of Perception
This is a very convenient localized system
this may be a small system in terms of volume
in individual Perception

i.e. some optical elements
which are removed
for example, from the physical body, well, about half a meter

and these are all the connections of the World
it is precisely those connections that have changed
well let's assume there in the last second
or from your understanding

as soon as you take them
these connections
in the form of optics you visualize, for example

because it's obvious
you can visualize what you need

here is an important element in the lecture material
in general, you can even say that about everything
from the point of view of today's lecture

what you should understand
and this applies in general to many lectures
that it all depends on where you look
you can see with your own eyes
on the door
can be on the table
or any other object
let's say which is like a static object yes

and it is possible to enter into Spiritual contact
there with the man
and at the same time the static nature of the subject
which you were looking at, for example, the table
this information is far from external
which goes beyond
it is not needed, it goes beyond Perception
she has no Spiritual communication

I just introduced this system
enough at high speed verbal
be more attentive to her in the lecture

why did i make the split now

and when you look at it means these events all

which are identified as changed events
you can find that source within yourself
which can make these events manageable

exactly the source

and here is the meaning of organizing this source
this is the meaning of well, spiritual self -conversion
Spiritual appeal to oneself

i.e. an element of your Spiritual development
appeals
to your main information
and it develops
as an independent system

i.e. here you see a certain line
which separates
as if a complex holistic development
you
from that
that each of your elements can also develop itself

and then it turns out that you can this element
deduce through, for example, the same clairvoyance
into the components of the most optimal
i.e. high-speed development
and just bring him back to you again

and it turns out to be something unique
well, like crystals
initialize
development of other crystals

you will have the same thing
increased let's say development
or maybe regeneration
which is the same development, among other things

then you get it because
that the element that was identified
as a Spiritual structure
localized Spiritual structure
this element was your element
and developed autonomously from you
like, well, as much as necessary

so that your entire complex of personal development
raise to the appropriate level

what is the advantage of this technology
that having looked once
clairvoyant element or Spiritual element
just where there are not even images
or spiritual clairvoyance clairvoyance so to speak
to some element of Reality
in the future
you can immediately set the task
development of this element
so that you come there at that event
already prepared

and at the same time
you were not preparing from here
as if not from this time
not by building up information there
and through the target level of interaction
with that viewed event element

well if according to the crystal system
it looks something like this
in optics for crystals for example

what if we are one crystal
we immerse ourselves in water there
and the next crystal system
continuously running
is out of water

that means light refraction information
already in the water
hits the next crystal
well, sort of in an automated version

they have recognition
and if you move them for a long time, they move very much
there at a speed of a millimeter per year, let's say, yes
there are such systems
if you move a millimeter per year
advance into the water

then they begin to take shape
adapted to water

Well, such experiments are quite well known.
as if at the level of special optical systems

then it turns out that the principle here is approximately the same
that you come to the event
and the event is already organized

respectively
element of just one viewing
one for example clairvoyant or Spiritual level of scanning
let's assume future events

while organizing events
it always happens in a complex manner

i.e. it might look like this
that you are walking on the sidewalk for example
and you, for example, well, you didn't step in a puddle, so to speak

because you looked ahead
and then as if
as if automatically you stepped over it yes

it would seem like one small element
but at the same time he worked
as an element of self-development

this applies to the system and Macrosalvation as well
and control of any event from your Consciousness

i.e. it turns out that only viewing the event
provided that you withdraw
level means organization of events
for you in fact or for your self-organization

this is still, among other things, the main thing
sometimes the level of your self-organization

you get it then
this is the type of control

and here is this level
control of any event from your Consciousness
in this context it is built
at the level of the pre-control area
often by eighty percent

because when you build such a management
you can see that the external organization
in relation to this event
this area is quite arbitrary

Now you practice
right in front of me
for example, in a sphere with a radius of 20 centimeters again
do practice at this level of vision
work right inside the sphere
and I'll keep an eye on you

if possible at the time of this practice
use the Spiritual Perception level
which in this case
looks like this

if you manage on your own
then you see in front of you often
well, a certain resistance area, like a wave area
in relation to which of yourself you work

in this case the work goes like this
kind of draws you into a system outside of you
Well, it's like some kind of traction element is created
and it is he who exercises control

i.e. the control is far from you
and it is precisely the inverse system that arises
and not a system of pressure from you

well it looks like it
that some stock systems
and you get drawn into this control area
the control center is far away
and not outside, as if outside of that physical space
which is near you

If possible, analyze this phrase
I said
what is "outside this physical space that is near you"

the thing is that in the area of pre-management
physical space around you
consider the sphere of management for example
as an element of the physical body

including the whole body yes

and consider the area of pre-control
near the body
then outside of physical space
outside this area near you
you have an area that is not related to management
from the point of view of the previous ideology
which I said about

that's why I mean exactly
work on the pre-management area
i.e. within this area

the task sometimes with such Thinking
may seem complicated
in principle it really can be complicated
but keep it simple if possible

you can just listen to the speech here and there several times
and get just targeted management and that's it

in this very segment of the lecture
there are a few minutes

when you get that kind of control
then the first logical element
I am already moving to the verbal lecture level
you don't have to do it anymore
it is precisely this control system
Anyone who wants to can do it

here it's simple then if you continue to study
please keep in mind if possible

what is the next step of management
it is always a known area

i.e. to do something
such a control system
the future must often be perfectly known
in those compositions that you need

the easiest way is to make the future known
the easiest way
means use the same control area

by moving this area
into the element of the future
and assigning a structural system for the future

mechanically it looks very simple
you highlight the same area as I said
select the pre-control area

then remove this area with mental effort
and translate it into the structure of a future event
and assign this area to the one you need

then you get control in the future
from a region that is not initially defined
and belongs to the field of pre-control

but you can structure it
and what's more you have
clear geometric positions
i.e. this area is very clearly marked

you can here
take this area specifically
from the area I said
i.e. over the sphere of the management objective

and it is even known
approximately there is a radius, or rather the thickness of a layer, let's say

i.e. in this case
you get
targeted and fairly effective management
using the optical principle
which works almost always
whether you have it there or not
let's assume some system of adding a control target
or maybe you even pawned it at some point
management goal in the past

here is the pre-control system
exists everywhere

and therefore you can use this system
as a storage type system
which means it will contribute
solving a specific problem

you can increase the density
by target management as I said in the future

as homework
look when I gave a preview
and pre-designated, so to speak, the technology
showing that you can build management
simply by the fact that you introduce pre-control
into an element of the structure of the future

look, it means that it would be possible
well, at the verbal logical level add
i.e. try some things
to verbally articulate
so that others could explain

i.e. how could one possibly add anything else here ?
This is at personal discretion
if you explain technology to others
then in this interval
what else could be said

I will say this in telepathy
and if possible in the next lecture
I will still put it into words
but in relation to another context of the lecture

you will find this amount of information

i.e. target management information
can be accompanied by different words, for example, yes
Well, it's clear that it's the same thing
can be expressed in different words

but you can always find the same information
this is the principle of this practice

for example in the next lecture
try to highlight the information there
which could be well related
with what I said

the task in principle can be difficult
it doesn't have to be the next lecture specifically
maybe there in a while
in five lectures

but highlight the system
which was laid down in this lecture
for that

logical principle
very simple especially in mathematics
that in each subsequent lecture
it often contains everything that was before

so here you just need to
highlight on information

having practiced with this system
Look at the pre-control system
how can we even distinguish them from the past
or you can highlight them
including from the future

like from the future
look at the technology
in principle it is almost no different
it's just that the vectoriality is immediately different
other space space of the future
but the technology is the same

and finding
from unified access
that in the space of the past
that in the space of the future for example

impulse of one's own Consciousness
find how the creator shows the work

unification i.e. the same thing
when you experience on the Spiritual sense
this is also what it is
while working with the Creator

because for the Creator
create
Generally speaking, everything is the same in many ways
here in terms of the development of Reality
and everyone has equal rights there

another question is that there are other objective functions
which are not defined

only for example Spiritual contribution to the creation

here if possible
find the Creator's work
and do as the Creator does
based on what I said

Well, after listening to this lecture many times, for example
especially if you watch it at the end
and listen to this lecture several times
for example, the 15 minutes that have passed there

you will see
that there are many open systems there
i.e. a lot of open things
which I specifically didn't mention
leaving yours to your own Spiritual development
it is mainly on the Spiritual

development continues there
already elements of the Soul, i.e. structuring of the Soul
but I'm interested in you
so that you can highlight the spectrum of Spiritual development

and therefore more than that
define the technology of self-development
based on this context
here is the Macrosalvation system

This is where I end this lecture
if possible, work with this lecture
more on my own

This is related to the fact that
that many questions and answers
I laid it down in the form of certain neutral sentences

consider in this lecture
this is exactly the context
and work on self-development
on this lecture material

there will be a 10 or 15 minute break now
and then there will be answers to questions

I'm starting to answer questions
in the context of today's lecture

and the question in this case is the first
it refers to that
what does it mean i have a concentration technique
for each day of the month
and here the question concerns exactly that
what *when concentration occurs*
on individual elements
for example, *fragments or parts of an object*

then when we talk about a person
then it must be perceived in its entirety
and taking into account Means *this situation*
how can you work with parts For example *body organs, etc.*

in this case
Well, from the point of view of a designated sphere, so to speak , you could say
when it was said that at the beginning of the lecture
I was talking about the sphere of target management
then I just designated the area of pre-control
that's the one I was talking about
which is located in the outer
in relation to the sphere means
system

we can say in the same space
but on the surface of the sphere

and management is based on the target management level
occurs within this sphere
when we can fill for example content take
control what you want to do
and consistently action after action
introduce into the sphere in the form of some kind of
generalized information system

here you can act in the same way
working with body parts
i.e. enter information
for example, restoration of a body part or an organ or a cell there
inside this how to say
system device at the level of Consciousness
you could say that
that this is a systemic device at the level of Consciousness

you enter inside
and at the same time you speak
that the surface of a sphere is the whole body

i.e. visualize in Perception
like the whole body

and then it turns out
what you work means with a specific organ inside
but in the predictive space
basically that's how it works

and at the same time you can work
from the field of pre-control
as we say near the human body
for example, doing concentrations near the body

and at the same time it means if you do it it means control
near yourself near the physical body
then part means concentration you can do
simply means pointwise
in this case this point concentration
will take into account the whole body anyway

because the pre-control area
it also applies to the whole body, generally speaking
and therefore it is quite clear here
what when we do concentrations
in the area of management, for example in the area of the body
or on points of the body
then we are still in the area of pre-management
in the context of today's lecture

and so if you are in control
as if a little further away from oneself
rather than close to the body
then you just pull out this area
In this regard, it resembles a kind of ball
if you pull in one direction
in other places it becomes thinner
this area

i.e. it is enough in this case
finitely expressed region

and here the control happens exactly in this way

that one point control
takes into account
as the sphere itself
as well as the internal content

i.e. as a person as a whole
so each element, for example, is an organ there

so as a technique, well, sort of added
from the point of view of today's lecture
techniques
to this level of concentration
you can also use this position

in this case
it is precisely the oppositional Spiritual structure
it gives exactly the integrity of the body

often possible not necessarily for example
it is the surface of the sphere that should be chosen
as a position of body integrity
you can choose differently
region
if the technology is different

from the point of view of today's technology
namely the surface of the sphere
this is the whole human body
from the point of view of information

the next question is this

what does it mean *how can you eliminate a cosmetic defect of your hands*
Means *and what's more, the former drug addict has traces of injections*

in this case here I think
what from the point of view of today's lecture
this is just a continuation of this question
this will look like an explanation technology

what when we talk about hands
and we consider it as the whole body
this is the surface of this sphere

then from the point of view of, well, parallel approximation
this is what we can call this process

or you can call it like this
that every point of the sphere is the surface of the body
well, like an approximate model
like a kind of shadow falling from the body there
over the entire surface of the sphere

then by selecting a hand inside this sphere
for example, let's say closer to the center of this sphere
it is possible to restore hands

either or means first level
means concentration on some point of the sphere
having passed the pre-control area
well, like at high speed
or it means inside the control area
but then this area should be somewhat expanded
should not be exact
and it must contain
the best thing is exactly the same hands

i.e. you take it in Consciousness
activate the brush of a specific hand or hands
Generally speaking, you can do this
naturally with everything with all organs

in this case just a hand
I showed the geometry of the location
within the management sphere
closer to the center

let's assume the skin is closer to the surface
inner surface of the sphere
i.e. well further from the center

this can always be found
by simple clairvoyance
where is which organ located

and then the management is as I explained
or activation of the surface of the sphere
well, a kind of point information acupressure

or means to be in the pre-control area
concentrating in concentration
this particular organ

and then as I explained
this pre-control is like a kind of locomotive there, conditionally
you put there information about the Brush Standards
and all this was taken away to the management target

i.e. there is no need to go any further
for example, to maintain concentration as if
and calculate access parameters
there you just need to put it correctly

" put it right" is here
it's simple, first of all, as I explained
the impulse must be located
inside the pre-control layer

i.e. so that your concentration impulse
by the wrist we assume hands
was located right inside
and not as some kind of float
somewhere floated beyond this layer

this needs to be controlled

when you see and make a diagnosis
what's inside
you get precise control

such concentrations
Well, you need to do several and better until then
when you already clearly say in real time
even if it's very fast
do not define the primary dynamics
i.e. on a physical level

and then comes the question
that *there is a tendency to severe depression*

here is the concept of "propensity to severe depression"
this is the situation here
what since this is already a generalized problem it would seem
not related to any specific local authority

then the area of allocation of this problem
exists as a target function after all
this area

i.e. the sphere of management is as follows
what should you do first
restructure in some way
transform depressing events
if they are real, for example on a physical level

it could be
some may be
not even significant from your point of view
a threat to a given person as if from an external Reality
from the physical level there from a specific person

but at the same time this person
perceives it as essential

i.e. you need to view the event as such
which is the initiator of this depression
and how and the second how should it be adapted
her psychology
for example, let's say we're talking about a woman

so what is the psychology of this woman
adapt to that
that in her future events are normal

these are basically the three elements
they are stuck in execution
just the way you want to do it
or you do it remotely, i.e. remotely
without saying anything you just work for management
or you tell this woman
what in this case
here is an external threat, it is not significant
then depression is eliminated

and in connection with this
in choosing generally speaking the decision how you will act
either verbally or simply by direct control
if it is not possible verbally
or sometimes it is not necessary verbally
you just need to change the situation without words

you make the decision
again according to the system of impulse approach
to this area of management
or enter the pre-control zone

in this case
concept of depression
and a combination of event systems
i.e. you need to first eliminate
a real, even minimal, threat
there is no insult in this case
here on the physical level

the second is to adapt the woman's perception
Specifically, it could be any patient
to the fact that in the future events will be normal
and additionally work on it in many ways
physiomotor dependence of the state
and so events, so to speak

there is such an intermediate area here
and it is precisely in this area
it is better to work in the same way from the pre-control
here you can pre-control area
generally enter into the sphere

as I said
what in terms of future events
in the management goal
you can display the pre-control area

that's where the state of the body means
depends on events, well, not directly
but as if through complex connections
you can enter the pre-control volume
and simply enter the Norms parameter into the volume itself
but be within the control target

means in relation to the event level
and for example to Norma so that there is no depression
It's easier to work holistically here
i.e. with the element of the Norm of the whole organism
i.e. with the surface of a sphere, generally speaking
in the area of the sphere's surface

in this case, a separate optical pulse
which will slip
for depressive states
they can be
or local or very rare
they just need to be looked at into the future

and clean this sphere inside
so that they do not arise
i.e. to restructure these impulses in the future

and then the technology is exactly the same
which I was talking about
or activation on the surface of the sphere
or this is the Norm of the state
simply means in an objective way
for you

what is the difference between what is the norm of the state
it's just a normal social norm
for example, the absence of depression
it's just information
and not a specific organ in this case yes
for example, as it was with the hand

and you take and bring in this sphere
to the pre-control area
and hold for a while for a few seconds
for example in Consciousness

and that way you get control
from the area of pre-control
or as I said
concentration on a specific area

here we have sorted it out in principle
from the point of view of the control systems of the pre-control now
as elements of the use of concentrations
taking into account the whole body
and for example, specific and generalized
management level
i.e. hands and, for example, a generalized level
this is depression

but if you take the hand yes
for example, to do control by hand
then you can simply restore one brush
the second one will be restored by that
what if there is a Standard of a uniform plan
then in the optical elements of the development of Reality
the second norm it can simply self-organize

so it is enough in this case

get one recovery
i.e. you can work with only one hand

and here is this principle
as an independent work
develop it if possible

i.e. it means if we have a certain Norm
created even in Thinking
let's assume we have an Event Norm
which we need we created it
this event is normal in Thinking yes
you have Thinking

if the concentration of Thinking is so high
that the levels of universal connections are affected
Well, to put it simply, a control position is achieved
only through concentration of Thinking
in this area
high emitting optics

then you get this event in Reality

this is the principle
optical transmission of information
according to the comparative system of Norms, so to speak

comparative means compared
with the primary Norm

you can do the management
only due to concentration
and practice this element at home

due to the specific gravity or concentration
density of light, simply put
in this area

you will see
Well, it's a bit like a mathematical calculation.
but nevertheless sometimes it is necessary to do this in management
if there is one there time let's assume

so you take and increase the concentration of Thinking
it's better to be in some
approximately at a given point

that's where they started thinking, that's where they started thinking
i.e. don't move the Thinking area too much

Means when is it better to do it near the physical body
i.e. in the space near the physical body
and not in the space of Thinking
which can be
not oriented towards physical Reality

then you have chosen this area
and they started to sort of enhance it in glow
to highlight, to put it simply
increase the intensity of the glow

and to a certain extent mathematically even
here I already apply it as a mathematical calculation
determine the length of the path of this glow
in order to get real involvement
some real event
so that it happens

i.e. the point here is
what if you concentrate a lot
well in any area
as much as needed
to gain control

now take find
control area of this event
also in physical space
you can even just in the space of Thinking
and bring this glow area
as if you were moving it closer

and look
how much faster is the control

and thus look
what is just Thinking
it might just be really Thinking
even with an extremely high concentration
or very slow influence on events

and even a single thought without special concentration
but in the field of management
it is there if needed

then instant control over the Rescue system

and then you decide

Well, you can do this peculiar thing even with a ruler
mark points on a sheet and even identify
what is the advantage of managing immediately, for example?
i.e. Thinking in the field of management
than just Thinking

and then you can
the structure of Thinking generally speaking self-organizes
those. This is how to think in terms of target images
as if at a minimum concentration
this illumination of thought or event
to still receive events
exactly for example in certain management goals
so that this event falls into

and over time, that means finding a point
which would not be the manager
more difficult around you

just pay attention
what does it mean when you practice a lot
almost all points in space
physical space let's say near you
they become managers
from the point of view of Thinking

then it will be enough for you
just transfer Thinking
closer to yourself
and you get control

so you if possible mean
Well, do some work to find the points.
who need to be made managers
near physical space

and then you will generally no longer need
for example, in a special concentration of Thinking
to gain control

it will be enough just
well, how to think about it in a specific area
Well, let's assume that you built it specifically for this purpose.

and take it and determine what the difference is
if you have built an image
area locally, for example, in the form of a sphere near itself
and areas that exist stationary from the Creator

what might not even be that much of a difference there
in the second level of the question
and how can I make the area you built
it wouldn't be different, it would be comfortable there
but at the same time it would be just as effective

such as the originally existing one

near a person
there are control areas
You can even find them for example

that means there is Thinking in them too or concentration of thought
leads to a certain type and kind of control, etc.

kind of self-regulation mechanism
both the organism and the management of the external environment

but I mainly give control
from incentive motives
those. control from you personally

because i need to
so you can manage independently
from existing elements
Well, maybe with the fastest possible control?

I need you to create a control
at any level
at any level of Thinking

and that's why
I give lecture material
basically which means largely built
not on existing elements
does active management mean something
if you think in this area

but you can find and look at these areas
how much again in terms of luminosity yes
on access to Macro Events

Macro events how to highlight I said
this is common information
and the access is very easy to see
you can even keep track of time without even having to use a watch
but simply to remove information about the duration of time
intersections of information in Macroevents

and you will see
as if there was a difference in the management approach

so that's why I say that we need this difference
if possible, consider it somehow

because as I already said
the principle of management should be like this
that you should always manage correctly
in the case of precisely Macrosalvation

and for this we must do
right away, well, without much effort
and that's what you're doing exactly right
you should still
or be able to do it after repeated practice
or by exploring, so to speak, the external area

It's better to go through practice after all
than through an element of such an optical study
although you can combine both
if time permits

and I have one more question
which was previously asked
here it is acceptable it concerns that
that when you think
then Thinking can happen
as in the area of your space of Thinking
not connected, for example, with physical Reality
this can happen at the same time
in the area of, say, physical space

i.e. you can clearly define
that this thought, for example, is near you

but at the same time it happens often
what are you starting to think
in the field of space of Thinking

and you fall into some kind of category
then you see that the thought is organized and functions
near you already in physical space
on a physical level

so the question was
how to translate first
from the space of Thinking For example
into the space of physical Thinking

and secondly, ^{what} *can the mechanism give?*
This is already a proposal from me
for this lecture level
what such a transition can give

so first of all, translate
from the area ^{that} can be called
space of Thinking
where physical Reality is not present
into the area where physical Reality is present

you can translate it using the same scheme
if we take the area of pre-organization
which is near the sphere

then the translation is carried out in this case in the following way
that approximating, i.e. as if assigning
^{it means} the space of pre-organization, i.e. pre-event
which exists near the sphere of the event

^{means} the space of Thinking
you can
it is precisely to correlate this space ^{with} Thinking
outside the physical realm
and the sphere of the event
assign the space of Thinking in the physical realm
and take and translate ^{here}

as a practice
do it in front of me now
I'll take a look

one of the elements of translation
spaces, ^{well, sort of} a pre-event type
or pre-control space
into the control target space

I just showed it
what can be introduced inside the sphere
for a specific event element

but somehow I crossed the border of this sphere
how i crossed this border
Here you do this as homework

so when you receive the transfer
from the space of Thinking
which does not correspond to physical Reality
into the space of Thinking
means that it is in physical Reality
you get the transition through
level of Spiritual reproduction of Reality

i.e. there
where the Soul organizes Reality
through Spiritual aspects of knowledge and management

here is the Spirit
it is organized differently by the Soul
in this case, spiritual development influences
everyone understands Reality

so here is the transition
transition area
this is this environment

and if possible
then select it in the control space
well, sort of similar or something systems

i.e. this is where the control takes place
for example, not only take if the Spiritual component
and where does mental control take place, for example?
i.e. the logical component
if we consider the positions of interaction
Spirit and Soul

in this case we looked at the position
by Thinking alone
and received the space of the organization of the Spirit
namely developing Reality
from the Soul
as a transition space

you can even consider
why is this exactly so

in this lecture I wo n't explain
but in telepathy
I within three days after this lecture
I'll give it from 10 to 11 pm
why exactly like that

and when you consider the practical meaning, well ,
so what can it be used for or something
in the applied aspect
these are the concepts that I spoke about

then the practical meaning is quite clear
You can get it here
Spiritual management
system of Thinking

this is a unique formation
based on highly Spiritual Truths
i.e. education is kind of the opposite
Thinking is put under control
For example, the spiritual impulse of Salvation

and the Spiritual Impulse of Salvation
it can be limitless
and that's what he is

therefore any educational technologies
will have a kind of superstructure level
which regulates
development of, well, a form of Thinking
it is in this aspect

and as an independent work
see how you can create
such educational technologies
which means the development of logical status
put under a kind of control
and this, on the contrary, is by the way the maximum freedom in Thinking
where there is Eternity of development

the logic is very simple
Spirit having knowledge of Eternal development
is the determining factor

in the addition of the space of Thinking

in the organization of the space of Thinking
actually the thoughts themselves

then you have the same thoughts
but they carry this one
light for example Macrosalvation light of Eternal life

but they are basically the same
i.e. the Thinking itself does not change in any way

but the governing meaning here becomes different
superstructure system means development from self-knowledge in fact
by creating different control technologies
from different sources of control

those. combination of control systems
gives precisely the educational principle
which is not just an education
but also immediately to the manager

and you can do it yourself
using different combinations

next means a question or as a request means
please give me the technology
unified cell regeneration system
aside 18 years

It was obviously written by a woman
since women over 18 years old they have in practice
so here is the question
precisely related to the difference here information
men and women here on regeneration

when we talk
about the unified regeneration system

for example, if we consider regeneration
from the point of view of reproduction
the next reproduction of Reality
by prolonged i.e. infinite type
when Reality is Eternal

then regeneration towards 18 years

i.e. either this is for example growth yes
if the woman is under 18 years old
or is it age-related rejuvenation

and when it comes to this type of regeneration
that is female regeneration from the point of view of unification
it consists of the following
what is for a woman for the female body
Infinity of development
concentrated among other things
at a one-time physical level
there, for example, is the birth of a child
i.e. this is also the next development

it turns out to be a one-time physical real level
this is the Infinity of development there fabrics
, this woman has it

like a man
there is no such physical act of giving birth to a child
then regeneration occurs by the age of 18, for example
if we take the same 18 years but not the vector plan

if a woman is 18 years old
this is vector regeneration
associated with a single physical act
birth of a child
for the Eternal reproduction

then for a man it's a system
just filling the cellular level let's assume
let's assume information of this kind

i.e. the difference is precisely in vectoriality
means this action
for women, vector type information is embedded
or by the age of 18
or minus 18 years
at the same time, she is completely oriented

i.e. there are 18 years
it's like a kind of starting point
and it is possible if for older women
it means counterclockwise
and less means clockwise

why is it necessary at 18 years old
because well, for the restoration of the body
here are the systems
when it's easy to put information of the future
this is restoration
and then this is regeneration

so it's like a healing procedure
sometimes used

and when we talk about a man, for example
then in this case vectoriality is absent
the regeneration process is simply set up
where is the concept of age
enters into the information itself inside
as if an informational impulse

that's the difference

from the point of view of the existing, so to speak, Reality
why does such a Reality exist
what is a man and what is a woman
and that means this Reality
has all the data for endless development

you are on your own
just work with this information
and look at why exactly this happens
where is that connecting base
that the Creator gave the exact composition
i.e. the precise organization of the development system
exactly in this form here

Why
where is Eternity of development for example
concentrated, for example, in gender differences

i.e. if possible, please answer these questions
there may also be a variant of vector distribution
development impulse for example
or some other

but if possible Here look
First of all, the difference
secondly, the unifying principle, so to speak
according to the system of knowledge

and here is the concept of a unified system
what is written here
this is the word unified
this is an important enough word
why am i talking about this request for so long

that unification is achieved by
what do you understand
at the level of Spiritual knowledge
that Eternity of development
this is the only level
well, like, like, the accuracy of development

i.e. unification arises in cognition
and if possible, these types of unification
you are at the moment of answering these questions
find

Well, that's all I have to say about this issue
Here I am finishing the lecture course today
taking into account the answer to the questions

and I would just like to add one more thing
as if in addition to the material
specifically related to this lecture

because in practice I give applied answers
related to the material itself, for example , lecture material

and these answers
occur at the current level
i.e. they are given , for example
for example, either before the lecture or earlier

look at the quality of the control system
here again from the point of view of the unification of the approach
that when you consider for example
where did the question come from
well let's assume this question is about cell regeneration

and review the lecture material
for example the answer is yes
try to apply technology
if there is some other lecture
or another level of understanding

then in that case what would the answer look like
for example, well, to a specific question

i.e. practice if possible
from the point of view of applicability
for example, not specifically, in practical terms , perhaps
one lecture

and you can even determine
why do i answer this way
Here why I think there is practical value here
today's lecture
in this context the question

look
how will the answer sound if the lecture is different , for example

i.e. the meaning of this training
consists in the fact that
what you should know lectures
to the level of that means
that they organize methodologies
well, each one on their own

or even each concept in itself
creates a methodology for obtaining knowledge
i.e. answers

for today
I'm finishing the lecture

thank you for your attention
