

GRIGORY GRABOVOY
The Teaching about God
Back-reflected signal control
17.03.2006

Hello again
The topic of today's seminar
this is my Teaching about God
Back-reflected signal control

at this level of management I show
how any information
which actually has the opposite meaning
can be used
as a means for direct control

i.e. if there is some kind of trouble , some kind of problem
it's actually like well considered counter information
information of the opposite sense and meaning

and if you know how to use this information
as a carrier for the control impulse
it turns out that we then, well, minimize or something
management task
and we work through the available means of access
to management

so in this problem it is important to find
as if the internal status of management
what is the criterion yes management in this case

i.e. well if you consider such a fairy tale there
like Alice in Wonderland
there are changed control images, well, as if Perceptions
and the criterion of Reality is
some kind of internal position yes human

and here is the situation with management, it is as follows
that when we look at this position
as an action position as a target position
it turns out that it is the very target
we put the structure of our personality

i.e. we personify the personality

for the purpose of management
that's what we want to do yes

we believe that the faction of Consciousness of the individual
mainly focused on the goal

then we understand
that the external criterion is a means of control

i.e. in this control system
the main thing is to highlight the target function
as a function to a greater extent
which absorbs the structure of your personality actually yes
i.e. you are more goal oriented

In fact, this means greater concentration
i.e. a more rigid concentration

Well usually when a person is
in unfamiliar territory
he concentrates more, that's understandable, yes
also there, as it were, at the level of control of even a physiological reaction
the cellular reaction is such that there is a high concentration, yes
here are the controls in the body

so it turns out that the management task
in this case it is
the ability to distinguish oneself in a control context
i.e. to look at yourself from the outside
realize
place
time

but when God created the World
He had a similar task here
so if we imagine that God creates the World
What is he oriented towards then?
which is His criterion of Truth in general Action

He himself yes
then it turns out that He Himself [...] sees sustainable tasks
management functions

it turns out that this is the task of Eternal development
target
forms His structure, the Body, the Earth, etc.
Some kind of worlds

and based on this
we can in the structure as if between the Worlds
detect structure
Thinking of one's own
and the Thoughts of God
i.e. God thinks in those structures
which are like structures
between control pulses
i.e. where the goal is not defined

i.e. from a human point of view
i.e. we simply and logically came to this conclusion
what is God's Thought
a person can perceive, so to speak, clearly and immediately
where the goal is not defined
those. interstructural interaction

and based on this it is then quite easy to identify
such an objective function
for example there well general resurrection yes
or just resurrection
one individual person

here the connections have a different type of control
there in society where this is not a widespread phenomenon, for example
this is not yet a systemic phenomenon

then it turns out to be just for God
this is expressed most productively
i.e. God is actually a supporter
and let's say the character
by resurrection technologies
that are understandable to people
because they perceive the World
as a structure well it's not always rigid and logical there either
announced

i.e. here is the Thought of God
in the connections between objects including

and it turns out if you think about it deeply
then the transition of these connections
and creates Reality itself
the transition is Thinking yes
the transition is the matter of God there, so to speak

then when we start thinking like that
it turns out that any fragment of Reality
has a connection with any other
by a system of continuous connections
i.e. it's not just a logical level there
and the material level

and then you get a good positive decision
is behind there negative moment of action
and here is the management structure
for example, there is the introduction of external Thinking, yes
there is aggressive thinking

Here a task of this type is set
what a thought
i.e. a spoken thought is a spoken word
this may already be an unimplemented action

i.e. negative thought or negative information
this is no longer realized in a negative sense
action

This is where it is important to understand
what is in negative status
there is always a status of positivism

and for example when information is transmitted to other people
and the task is set precisely there Macro - so to speak
Macro-welfare, so to speak
Well, in a simple sense

then they have this add-on [...]
that the aspiration is still going for the better

but God also built the World this way
that this determinant is additional
which gives development, well, some evolutionary quality
any matter

that in any case development is underway
even in physical models for the better
there is entropy, it strives for equilibrium, for example, etc.
as this is the physical aspect of this Reality

then when do we start
here is the management structure itself
to make it more fundamental

i.e. we start like well develop
based on the factor of past events

then it turns out that we see
that the very fact of manifestation
when a person suddenly sees the light
that past events are illuminated as if by a different light
Well how they seem to be the same but the light is different

i.e. he begins to look at these events from that side

i.e. there is, as it were, an external side of events
logic of connections
and there is an array of events, some concentrated matter

and suddenly the light passed
and he somehow perceived everything completely differently
events

i.e. the event is stabilized and not so dangerous
it can be overcome there yes in the future, etc.

and that's when he starts to perceive it that way
then you get the other side of the event
i.e. the reverse action
and even the reverse course of events

because from the opposite action
as if the opposite meaning of the action
before the return stroke
a very small quantity, it is logical
i.e. it is certainly not positional or technological
it is more of a logical value

and that's when we want
let's say convince another person
for example, we have such a task
well , let's assume that we give information about Eternal life
and we want a person to know it immediately or simply

it is clear to us, therefore it is somehow unclear
why are they there or why is a specific person there
it's not clear

here is the transition between the word "understandable"
or there the word "action" is the word "transfer of information"
or if we use the word "incomprehensible" there yes

then in the word itself, let's assume "not" it is still "understandable" yes
i.e. here is a word to negate the word "action"
you still need the word "action" itself

so it turns out that if we start to go nuts
Well in some logical sense
then we finally come to the Spiritual aspect
these are precisely the concepts of counteraction
at the level of the Spirit
there may be no opposition
at the level of the Soul there may not be, for example, yes

The human soul is initially Macro-creative

but there is some level of action
which actually draws in the Soul
or there is the action of the Soul
in some series of negative events

and this is the external level
if a person is focused
for example on Macrosalvation Macropositive action
then he doesn't get involved naturally by his own personal intent
but there may be some events there that concern him
which he resists

but if, for example, we go further
then the opposite meaning
i.e. the reciprocal value of an event of some kind
this is a positive action that has already been taken
in logical and Spiritual Perception at the same time

i.e. I am entering it here for the first time
level of simultaneity
in logical-spiritual perception

let's assume logic and Soul are clear
there is an internal connection
beginning of action

and when do opposite substances work?
at the level of, let's say, a single-type action
and specifically heterogeneous substances

it turns out that inside the value of any
there is a level that
well if you call it not a contradiction

then at least it is a heterogeneous structure

and if we project

Well with such a specific technological technique

the structure of Consciousness for example

let's say some event

and the structure of the Spirit

then the event can be sort of fragmented

to the Spiritual

there is a social component

fraction of the collective Consciousness, for example , etc.

i.e. thus we come to the conclusion that

that any quantity that exists

it can be presented perceived

in the form of directions and systems known to us enough

Consciousness

Spirit

Soul

body for example

and that's when we start

component of projection onto the body

consider

as projections of Eternal action

then we must identify in any event

Well some kind of Eternal Engine there, yes

which always shines with the light of Eternity

Well this engine should be of logical type

and then it turns out that

Well some kind of mover let's say yes

if I can put it better that way as I called it

i.e. when we start moving forward

in the course of this logic of Thinking

then it turns out that if this well a kind of mover, let's say, yes

some information that contributes

growth of information

growth of events

if we have correctly identified

then it makes no sense then

in some negative events

in some resistances, etc.

i.e. it turns out that there is a factor of some resistance
is this or is it not some kind of accounting
prognostication itself is precise knowledge
it can be used immediately
but it looks like Thinking

and if there is a prognosis
but treat it as Thinking
for example as a probability value yes
then you can kind of take measures ineffectively

if we still treat it as an information structure
which forms matter through your action
then this might still be a more effective way

and yet, at some deeper level
a person perceives all the time
personality statuses aimed at the main types
for example there is Eternal life, universal resurrection
what is eternal yes

then it turns out based on this
[...] can be formed as a specific event

and this is when we begin to delve into this structure
it turns out that we come to the idea, generally speaking
to action
that with any action, with any combination of events
There is always a Macro-positive way out

here is a private positive exit, it is very complicated
say that one person there is obligatory
will receive some benefit
It's quite difficult and in principle it's often even impossible

because it exists here
phase of Macrocollective Consciousness
and here is when for everyone
and for everyone, for example, Eternal life
then the light of this life shines through so much
that the level of the negative event does not remain

because a person begins to understand
that in principle it doesn't exist, yes negative event
or it's some level of knowledge

or he did not take action in a timely manner
and again he must now analyze
what why the event happened

because there is a desire for another object of information
for some reason the external system did the same thing yes
in relation to the manager, let's say so

and here we come to the dialogue system
why external system
what we consider a negative event
that's how it works

after all, in any external system
the status of Eternal development is established
what does external system mean
maybe he wants to give you this event somehow
i.e. it helps and it works
and then where does it help?

and when we begin to recognize
well, it's such a subtle signal [...]
it is at the level of Thinking

here we finally came to a pure thought as such
right now, well information began to reach her
what is Thinking as such in its pure form, i.e.

I have now outlined this area
Thinking doesn't come from nowhere after all.
as if it were considered

and how we perceive at the level of Thinking
some object of information
this is how it often looks on information already in action

i.e. the body perceives what we think
as a structure of action

if we find ourselves in a number of specific situations
and due to Thinking we do not overcome yes
for example, with ordinary standard Thinking even
Well without , for example, control technologies
it's just that any person can think about something
and it should be developed safely somehow yes
on his way

that's when we see that synchronization
thoughts and bodies
this is a certain kind of geography
even a certain geometry of interactions
and quite rigid geometric systems

then it's clear that
and the rigidity is so well the value is high
as if these systems
and it turns out that the value can be so large
this is the toughness

what we see is what is reflected
this is like a return signal
which falls into a rigid system
it is absolutely, well, kind of ineffective
from the point of view of possible defeat there
or there is destruction of information
if the system is like Well is he studying or something? increases solidity

i.e. the more synchronization
Thinking and physical body
the more accurately we determine the external signal on the one hand
he can kind of push more

but we see the area quite clearly

we see all the connections
and personal initiative yes
we see the Soul of man
who implemented the signal there

and thus we can then already teach yes
the telepathic phase of communication begins

and it turns out that the factor is telepathy
this is just a transformation
any other signal to the level of often
exactly the opposite

here is the negative phase of information
well, that's it
the selection of a pure fraction of Thinking, so to speak
and transfer to the media
allows you to work this way
what is the negative fragment
is the bearer of pure Thinking

well and really there
spiritual pure Thinking is what it is
that there are no negative statuses there
do not affect the essence
i.e. they are less strong there, they are less in control, etc.
well, that is, they simply identified a logical context here

and then it turns out that God had to have
such Thinking
what is the external control factor
i.e. for God all events are probabilistic
even [...] were presented yes
all possibilities yes [...] events

so pure was the thinking
and as if super-achieving in its light
that external Reality became external
in relation to God
i.e. He began to control her yes

i.e. the light of thought is so powerful
that He pushed Reality aside
and Reality can no longer cause harm there
To God
real harm
i.e. it can't enlighten, as it were
Its control phase area

it turns out that based on this
in order for negative feedback events to occur
reverse even in the optical range
they are not necessarily negative
inverse of the propagation vector

let's assume we can see numbers in front of us
well, there you have to mentally consider
and can you see their projection?
for example there well for the physical body of a person

i.e. if we consider this fine line
those are the numbers that, for example, are in front of a person's face
and the numbers that, for example, let's say, are behind the back of the head

i.e. they can be the same
but if we see the first ones
then we can just guess the second ones

that it is the same thing

i.e. the same signal

i.e. we kind of listen to them , yes

we see with some kind of inner vision

but we don't translate into Perception often

and if we see, we see that it is the same thing

we don't even need to translate

i.e. there are phenomena that are perceived quite clearly

as untranslatable phenomena

they are like that anyway

Well, I can look at the two joints of the table there.

but why do I need it again?

this is quite a big load

always thinking that this table on the right is the same

as on the left let's assume yes

and it turns out that the situation here is like this

that to repeat the same thing

there must be a load

i.e. it is often

and in general to do the same thing

this is a load comparable to the Action of God

God created matter for example

to do the same

it is necessary to do comparable work

and here it turns out

that the main status of management in such systems

to overcome the reverse signal

do the same thing that God does

but from the point of view of the positive level of development of this system

i.e. we do not work with the current time fraction

we just move on

into the future tense system

and we make this fraction present tense

i.e. here we are working with the future

and looking as if into the future

if that's how I said it

to shed light on past events
then some kind of clearance of a different type is possible
on the other side

then using all these mechanisms
we start like well a circle or a ball
these negative events
roll up
into the light of prognostics into the light of analytics yes
from the point of view of future events there

and based on this
when we start to differentiate the system
as a system already under control

then it is clear that here we no longer have
Well, as such, there was no problem that could have been there initially

for example, in yoga practice
this is an ancient Buddhist system there
or more Tibetan concentration

they have concentration
this is a plant that looks like a lotus, let's say
well with some snow there
it grew to the side it did not grow from the person

i.e. the structure of growth of rest or matter
was withdrawn
for the physical body of a person

if the body is a growing body it is understandable
it's kind of natural at the management level
then growing matter from the outside was already an achievement

i.e. it means the external structure of the external Reality

ability to bring out Reality
beyond the limits of one's Consciousness factor
and control it as if from the outside

just like God does
He controls as if from the outside

but God's governance is built on that
that there is a super signal with super fast speed

and God calculates everything
He makes Reality
He sees a system of calculation ahead
and finds a structure of agreement

i.e. a person either agrees or does not
he can walk straight
maybe go there, let's say, in the other direction

and that's when we see
control system as a speed system
then it turns out that if you see
negative information
then it is enough to increase
Speed of Thinking
speed of action
reaction speed
or just take and perceive
some kind of completely neutral
foreign object of information

and then it turns out we have
quite active management
related to the fact that even negative systems
if they start to get closer
at super speed they go into neutral phase
i.e. they become harmless

Here is one of the arguments that was received
as well as applied material, you could say
in working with this control system
when we see a negative status
or there is unfavorable or opposite

in case we are engaged
for example , there is a system of persuasion of a person, yes
then it turns out that a person has the right to think as he wants

if he thinks creatively
we have no right to target it there
that's exactly what we even really like, yes

but on the other hand
if we see future events
and they are problematic even for civilization as a whole
we have the right to save him there

i.e. to convey information in some way

here is the information delivery
by means of superspeeds, as it were
actually viewing future events yes exact viewing
it allows you to do quite specific activities
i.e. technologically expressed
in the form of some specific manipulations

i.e. specific techniques
specific let's assume control systems of this type
that we see the situation as follows

after all, the future is determined there precisely
at the logical level it looks like this
that there are some number of events in the World there
Well, let there be a billion there
or there could be an Infinite number

and a person due to the fact that he quickly evaluates
all events that are possible, let's say
Well in relation to a particular system of action
the number of events is still limited
maybe a million yes if it's a complex system and all
if we exclude some force majeure circumstances

so that's how it turns out, let's say
evaluates very quickly
all connections
and it comes to the conclusion that this connection is precise
based on past experience

if you just think about it logically
in one of the directions of a kind of predictive system

then it turns out that the pressure level is going
on mind
i.e. on the structure of human physical tissue

and further if we consider the physical fabric
as a level that is associated

and actually carries information from the experience of a certain

and then comes the pressure
as if into some kind of super-infinite environment
and the physical fabric itself

i.e. we ^{kind of} feel out the area
at high speeds
that somewhere there is a physical body
passes
into the Infinite Phase at high speed

and then it turns out that if so
and so can this point be found in the information
then receiving the signal from here
on your physical body

and at the same time as a consequence
in relation to the physical body
we can perceive
their own events, their own plans

then deducing these areas
already by direct volitional control
in the category of high-speed control
we can avoid contact with negative environment
even if we are inside this negative environment

here is a very important conclusion by the way
i.e. it is possible to be in the structure
generally only ^{negative} information
Well, with our logic
because in the control logic
what is negative information at all

here God set the task
so that life would be Eternal and everywhere ^{yes}
and in front of Him there is outer space, vacuum, etc.
management functions that are related
with the phase of collective Consciousness

i.e. if you take and look at it
how does intermolecular interaction occur
between there brain
and ^{let's say} space
which is near there
information space of Thinking

then you can see it there
and technologies for creating a vacuum there and on these planets, etc.

i.e. here is the structure of Thinking
is projected
on the structure of external Perception
we see what we reproduce
some part of the body
exactly with the whole body
with the whole body

and then you get communication lines
whole body
with all Reality
they are absolutely clearly provided
in the form of almost exact lines
as if predicting the future

into the future at a certain level
becomes an absolutely precise phenomenon
which is known to man from the very beginning

just as God knows the future there
there is Macro creation yes

Well a person can count, for example
that he sees less, for example, let's assume

and then it turns out that based on this
we can consider
and how will people react in general?
when will everyone know there about the future

for example , there God knows everything
and how what
what is the first question a person should ask
To God

God knows everything
what can he ask Him there, yes
or how a person should behave in general

this is the question
when the level of general knowledge
Well, everyone understands logically there
it may be different, but it's how you would behave
maybe the one who starts to solve some problem
reacts differently

and then the question arises
that is the criterion for choosing a solution
this is a criterion, well, how for which
as they think there in religious aspects of governance
what for which one might ask

what is a person like when he meets God
asks in the form of a question

after all, the question is precisely about dialogue
i.e. either tasks of some kind of management
or he asks to ask a question

then the whole situation that is happening turns out
this is a dialogue with God
essentially human

i.e. the person is located
in continuous dialogue with God
Always
it never stops
like some kind of umbilical cord
which never ends at all

then it turns out that based on this
when such connections are quite dense, yes Means

but man
you can't say that he is there
let's assume there by analogy with the fruit
in intrauterine development

he is completely free
that's the difference
that the connections are very close and he is completely free
i.e., some kind of paradoxical situation
which is what motivates and shows as I said
the place of God's Thought

complete freedom
and super density at the same time yes
opposing systems

then it turns out that it is multi-vector
or opposite vectoriality
it's not always bad

i.e. any system of negative characteristics
some kind of there

it can be developed
in the structure of some hinges
which in total they can be quite good

Well there is a large mass there that is harmful
she might be bad
if you make it milligram by milligram
it may not be dangerous
this is [...] a physical example

then it turns out that based on this
we can consider
its future multicomponent
there in different environments in different systems yes

always find a positive status
and everywhere
it is enough to find it in one place
a person understands that he can find it everywhere
he just has to do the same

i.e. he becomes the master of his own destiny
he sees clearly in some situations
and then suddenly it has some kind of everyday basis
sucks in
there is shopping, distraction, some business

and he thinks that he is being drawn into a painstaking environment
some of these actions that
Well, it's not like they're not controllable
but they are not the ones that I would like to do there, for example , yes
when choosing a system solution

when it comes to Macrosalvation
he may be behaving calmly
especially if he works there intellectually
due to technology
for example, there is my Teaching of Direct Control
he doesn't care what he does
he still controls, let's say
if this is my Teaching

if just a person works there

or is involved in technology
that require distraction
it turns out that he is kind of wasting time on this

that's when we come to the idea
that he can manage and not waste time

God is outside of time, yes
He manages but He doesn't waste time so it is considered so

and then it turns out that we come to that
what is negative status
he is always controlled not only by you
he is controlled by other people too
who can see accurately
or just at least at the level of collective Consciousness
perceive the signal

i.e. if people learn to perceive
signals such as negative status
at least such a person there
if for one negative
then it can be a negative status for another

the person he is in general
in very similar conditions of life and development

and here if we start there with oxygen supply
ending there with social conditions

then you just need to switch to the Macrosocial status
i.e. on the status of collective Consciousness
where exactly it happens
this is exactly the action of choosing a solution
by influence on collective consciousness

then negative status
you can just translate it into the fact that it won't be there
here we have made the control
all this is quite by the way a forceful action

we took and through the collective Consciousness
translated
into a status of complete absence

and now you can explain it to another person

say

Here we did it, take a closer look
get the same result

and in principle at some level of dialogue
when you show
how to transfer knowledge
how to solve your own problems, for example
through knowledge transfer

and when you pass on knowledge you should in principle
actually show a person
that you are doing something at the same time and it means that you are doing something at
the same time

because the principle is well, how would you relate it here like this
for example, there is a carpenter who teaches another
he should still have it
is at least a chair there which he made himself
i.e. it turns out that he should anyway
do something to yourself

in this case, such a thing arises
like an interspecies level or something
in the Reality of interaction
this is the level or something in wildlife
that similar systems
do the same type of level of actions

why did i translate it right away
to such a level, well, biological
because here again a contradiction seems to be being built
as if yes another type of meat for example
people eat meat or fish
but in essence, contradictions can also be avoided

if if how to get into it
into the structure of development of matter
well, such as biological matter of animals
and consider the structure of growth in evolutionary development
at least at the level of telepathic contact

because in telepathy the system is of the same type
that you come into contact with any object
what about the object there that relates to [...]
concepts such as " wildlife "

in telepathy the reaction of an object or so to say "response" in quotes
it may be one and the same
depending on what kind of wave and at what speed
take this optics

at super high speed it's all the same
God created the world indivisible

therefore the object's reaction and the method of response are the same

so it turns out that way
we can bring control to the object
as if on the contrary from myself
to walk across this world and back

Please note that when you walk around the world
to the object
from the information of his reaction
then in general the light is quite rarefied

i.e. it turns out that it is quite sparse
and when you walk you are still forced to create light for yourself
you have to rely on something

it means God is going to the goal
He creates the World and at the same time
not only He created it and everything
He implements it in real time.

and it turns out when you start
see this aspect already
and this is no longer some kind of inter-information interactions
some interspecies for example

and this is already a concrete matter
and the specific matter
at any point in space and time

and this is already if the characteristic is simple
and what kind of matter is it anyway?
if the world comes up with riddles yes
then it turns out that such a riddle can be posed
and get
what kind of matter has the same properties
for any point in space and time

Well , for example , there I can also come up with an answer

to this riddle
then I can consider that this is Thinking
thought

what difference does it make where the thought is [...] the moon
somewhere around the arm
in the area of the table
doesn't matter
or in general in the space of Thinking
where there are no spatial coordinates at all
you can think like that too

but it turns out that this is some kind of universal matter
and then if you look at the idea from this side
then God is also present here
This means that we can contact God through thought.

here is the inseparable connection in the structure of Thinking
where in the structure of Thinking there is a divine spark
i.e. where is that contact
where, well, if you approach it specifically at the level of geometry

and you can approach it however you want
what is in your will what do you want to do

then you can find a section that is not recognized
as soon as yours
this may be the effect of some external information

here you see the first sprout
how does information flow and how does it grow

and when you start to see it already
then it is clear that in the information itself there is growth
That's how it happens logically
that something is possible for the object of information is not necessary

there is a plant growing in some place
and some things are good for the plant and some things are not , for example
and it turns out that it is not useful
it might be useful for another plant
i.e. a different quality in a different plant

and this is where the level of external vision arises

why did god create it like that
that there are different components

for what purpose at all
God could have seemingly created everything the same way
and everyone is happy

but then there is no freedom of development

and it turns out that He went for it
the decision as a Person
that He gave freedom
but people will have to learn to overcome the contradiction

general meaning even in management
this logical level of life perception

then it turns out that when we come
to the structure already fundamental structure
overcoming contradictions according to God's task already

then it is quite clearly visible here
that we are already looking for our own path

i.e. as soon as we actually get there , as if
in management
to God's tasks
then we ourselves are looking for our own path
Somehow it sounds a bit different again unusual maybe yes

because it would seem that if according to God's order
we are going there we need to perform

but in reality, it turns out to be something completely different
if God looks the other way around
exactly when you get there
the path opens for you

and why does this happen?
because a person only needs to realize it once
that he saw God's task
he becomes free
he feels at ease there, he feels good there
and he, as a freedom of choice, does something like the following
for yourself there for society

so when we raise children of people there
Macro-creative
they have such areas of control
there are a lot of creative opportunities

there are powerful management capabilities
which are often incomparable
even with the logic of Thinking
they are much higher
what form of governance can be assumed there?

and when we start moving forward
then the superpowers that are generally visible
here a person sees that it exists
he sees that he can wield this peculiar power

but then let's direct it
to the very essence there on life
let there be Eternal life

i.e. what problems
if he can solve everything
why is he he naturally can then
make the task of Eternal Life feasible
Well at least there for myself
for those who somehow react to this information

and if he doesn't react, he can still
it's just that here it's clear that some time has passed
you will have to spend more

and then it turns out
that here is a choice of a solution, a choice of a path
it still exists in humans
a definite and unambiguous choice
which is aimed at the benefit of all people

here we get a choice of benefits, well multi-vector choice yes
why the future is often transparently visible
not infinite number of solutions
and it is clear that if a person needs to go somewhere
in order to save someone, he usually does this
i.e. he goes and that's it

although there may be problems there or something else
but he still does it
protects something, saves something, etc.
or just does some things
which concern his relatives and friends
and here he is or just people even strangers

he keeps walking the line

in fact, he is actually in Eternal development
Well, if you think about the subtlety
where is this subtle connection
constant continuous communication
a person as I said
and God

it's deep if you look
this is the line of Eternal development
and in action
and in the Soul
and in events
both man and God by the way

this is exactly where we have already come to that
that God also has his own storyline
in relation to a person
i.e. He develops his status of events
depending on that
what in general how does a person behave

and in his very Macro-love for man
i.e. He loves man as much as the whole world
Well i.e. it seems to work out from the point of view of human logic
this is the ultimate love

Based on this, he must then think
Well, that's enough for two, yes
He must think
and for the person before whom He builds Reality
and how can He create free will at all

from God's point of view
once He builds all events
He should do it naturally.

then it turns out that
what is the action of man then?
that's how it's shown, yes
i.e. to understand that He created freedom for him in principle

it turns out that there is a sign of equality here
from the point of view of Eternity by the way
First of all, God even seems to consider
sign of equality
like between people at the level of Eternity

says that here
It gives freedom which is , well, given among equals.

maybe a person can live there on a desert island
and have some kind of purely abstract freedom
Of course she will be free there
but if he doesn't know anyone from people yes

then it turns out that this is a different type
God being alone
in the structure of the creation of the World
naturally understood
that the level of His personal freedom of God is yes
personally His Actions there Macroactions
He is always connected with the freedom of the external world.
but in essence with the freedom of any person really

i.e. at the social level of God's Thinking, so to speak
this also exists
here at the level of Macromanagement

He thinks the same way
Well that's the point of God being somewhere
well somewhere there on some uninhabited island
if He personally is free there Infinite time

what is the logical sense anyway
It seems like there is no sense at all, right?

so it means naturally He needs it
convey this feeling
with which he himself is familiar, for example , there, well collided
and each of the people encountered

principle of personal freedom

and here at the level of Macrofreedom
as soon as this element hits
into the structure of some negative level of information
then in this negative level of information
and freedom is an infinite number of actions in essence

in Infinite number of actions
there is a positive action
for all objects even logically

Well, certainly in relation to that object
in relation to which there could be a negative here

if a car drove by there
She might splash a puddle on someone there
but maybe someone [...]

and here it is
what if we start thinking like this
it is because man is free
and he gets it
the ability to control any system

just like God does yes
i.e. God having known this Reality
at My Place
It increases the structure of this activity.
in another person

and here is the transfer of this information
for example , there, well, let's even say there's an ideological party line
although not necessarily just a person
conveying information of freedom of action
there is complete freedom of personality in Macro-creation

transmits control structure all the time
any object
and use of any object
in order to promote their system
as if of internal action
inner vision

here even the internal [...] are visible Yes
in its events [...]

God who is Eternal
He organizes all the time.
some line of events

here's another small nuance
With the Eternal God everything has events
and He is the same as from a human point of view
He has to move them all the time.
i.e. He must develop them somehow
He must have
some number of interaction events, etc.

and it turns out that based on this
at the level of, well, logic, or something Thinking
at the level there if so in essence Macro actions
at the level of general connections
he just chooses to promote co-creation

because creativity
gives an even more Infinite phase of events
and he goes towards his goal more concentratedly , as it were

creative level of people
allows us to see the freedom expressed in their actions
in the concentration of Eternity

then the question is
and there well why does God need where is He going anyway
i.e. He is already Eternal
what does He do in general in this regard together with people

people are clear there they learn and become the same

and then, over time, a person will also face the question
here he has the structure of Eternity
what will he do next

i.e. a person is developing Eternally yes

then we get the first essence of man
to highlight the internal motive in any phenomenon
and make sure that any phenomenon is manageable
on Macro-creation
even negative

i.e. it is obtained at a certain status
for God there is no concept of "negative events"
or there are "positive" ones at some level yes
i.e. when a person begins to delve into
into this essence of the World
Firstly, there are much fewer negative events.
straightaway
because they are disbanding
even before that level of possible formation

and secondly, this is another point of view
allows you to accurately find the control context

i.e. all external information

which flows to God
It's just from the point of view of human logic
manages to get there on time as best he can
enter control pulse
and it doesn't seem to matter
some kind of, well, for example, significant problems in general

i.e. from a human point of view
it has to be perfect
but if you use this information
how does a person act

then God is all the same to teach man
He must try to overcome
his system of thinking
there is his system of possible actions

when you start to see
how other people overcome
Well, well some problem
and you start helping
then your experience increases by the same amount
how much did you help there

i.e. the more people you helped
and it's even better if they taught you
and those people taught others
the more efficient it is
level or something development of your experience

and by analogy here
i.e. such a super task
or there or maybe even minimal
God's task at the same time
teach everyone Eternal life
at some one of the levels
at some point, well, maybe even at one control point

i.e. concentrating
and doing a human action for example
be able to spread all knowledge

there are Divine ones, it's clear, there's nothing to do there, yes
there you can take and give the same development there
how is human life development

but to give such social knowledge

there is some point

and here is a person when he discovers it
his knowledge spreads infinitely
which in essence of course are
knowledge received from God
or there by God's knowledge
knowledge of Macrodevelopment

but as soon as he perceives this point
maximum access level is in progress
to any information
to any person for example

and then we see that here
the level of , well, sort of internal penetration
into the situation
level of some measures
this level is always dynamic
i.e. the next level may be different

i.e. by doing something a person leads to that
what and what next
how does some unpredictability manifest itself in general ?
from God's point of view
how to create this unpredictability
why did God need her

so if we consider
some unpredictability of the future
as a development system
then it is enough to know in advance
what needs to be realized
i.e. what is generally necessary to know in this World

then the unpredictability disappears
it becomes clear and visible what to do yes
and what will happen in the events

i.e. it turns out that the prognostication itself
it's just a preliminary, well, in fact, solution to problems

here is that Reality
which will somehow develop
according to certain laws

i.e. this is knowledge of the development of some Reality

based on , well, let's say, the primary factor
i.e. the primary environment
some kind of geometry
some contact with this Reality

and that's when we can say
what is the physics level there
we need to know some processes
[...] are developing

we can know in principle
there the behavior of some systems is known in advance

then the question arises
about observing the system
at the level of Spiritual diagnostics
know
how will real events develop
if a person has time there
if there are systems of his personal actions there

and this is where the level comes in
that at a certain level of the situation
he has the situation under control
and it develops in him

somehow, yes, the situation is growing
he holds her there in his heart with his soul
he somehow grows it
knows that here he has a certain there
Well some warmth there some development
he is always developing some information

and on the other hand, he does it on a physical level
what he manages to do

and then it becomes clear
why did god create it
such an Infinite Reality
and why the World is Infinite

from God's point of view, if you translate it
that for Him everything is Reality

then this factor is like a reservation yes
factor of favorable development

there are other possible potential situations
which He simply provides for only

this is the factor that actually creates
Infinite World
for God

i.e. God is just
if from the point of view of human Thinking
God creates because everything is real with Him.

and based on such a factor of events
we can take it very clearly
and the negative status is easy to display
into the structure of such potential simple Thinking
take out of the border, say, external access

and then it turns out that here as a carrier
all these actions yes
the very structure of negative information
causes an increase in these spaces of Thinking
with a favorable outcome yes it turns out

and at some point
negative action becomes ineffective
because this is the external action
leads to even more rapid growth of spaces
as if parallel Thinking
such a simultaneous
where is the positive level of development of the situation

then it turns out that the person is at least at peace
It's as if he's not doing anything special
However, the negative status does not really affect him

and moreover is used for growth
these positive spaces are obtained
if you take it under control yes

This is how I showed it now
well, some so to speak fragments of control
related to use
there may be a negative status

and it is possible to show here what is essentially
there may be no negative status
if you also use this information

in order to be able to compensate
and generally take control

and as if even possible
when at high speeds
you might not even notice it

then a person can work there peacefully
with all this negative information
it just kind of dissipates and that's it
even without direct control systems

in this case I was just describing systems
still which arise
as counter systems as if by themselves
often in many ways

I'm finishing the seminar today

Thank you very much for your attention

Today we worked a lot, I see it was very effective
