

GRIGORY GRABOVOY
The Teaching about God
Accurate forecasting through past events
25.11.2005

The topic of my seminar today
this is my Teaching about God
Accurate forecasting through past events

in this topic i show
in what way by recording the events of the past
not necessarily specific events
and that means formalization on what we can
using some information that is recorded
have an accurate prognosis

and here in this technology
the same action needs to be considered
as God did when for example he created the structure of the past yes
if you put the question like this

then it turns out that the structure of the past
this is also a certain system of information
which for example looks like a creation system
from the point of view of such a current moment in time

i.e. if we do not consider
the past as a supposed cause-and-effect system
which for example remembered by man
and consider
as a system that needs to be, for example create
in Human Perception

then it turns out
that there are some special laws there, so to speak
which are manifested in that
what should we consider
some mechanisms of creation
element of the past in Perception

i.e. a person has lived through some element
for example in the current time
at the same time he remembers elements of the past

First of all , he must
from the point of view of how God made the past
accept
how God creates for example his system of Perception yes

if God wants to consider it
that the construction of the past is the same construction
as well as the construction of the current time and the future there

then it turns out that it is here that you can see
how then is the system of future events constructed

because the construction system is generally for humans
any factor of action
it is always a system of action in the future

and if, for example, a person, for example
acts suppose by construction
data from past events
it still operates in the future tense

it turns out to be a physical action
refers to the level of, for example, future events
at the moment when we are talking about building there
systems of the past yes
for God from the point of view of man

then you get an accurate recording of events
for example, so that in the future
and how could this situation be managed?
it's very clearly visible here
what do you need then
structure of future events for example ahead
consider as a system similar to that
that there are some kind of general principles for constructing information

there is both past information and future

and then it turns out that in this case
we have practically such a status, so to speak, actions
what if we, well, there, discover in the current time, for example
the system of information construction as such
then the information of the future
there will be a system built similar to that information
which is information from the past

and at the same time, well, let's add some coefficients, yes let's assume

then it turns out that we need first of all
see the connection
present tense for example
with the time of the past
and with the time of the future

and it turns out that based on this
we can do it this way

means to share the present
to the level of the contact system
which interacts with the past tense
and a contact system that interacts
for example with the future tense

and from the point, as if, like this kind of sticking together
even moving the past into the future
i.e. for example, there is a task that was in the past tense
she moves to the task of the future tense

and as if we are considering
this very system of action
as a system we assume a further level of information development
then here is the system of movement itself
some kind of rapprochement
the task is moving, this is movement

and now if we look at the structure of this movement
how do we set the level of control
then it turns out that the moving section
will add a kind of autonomy function

for example, here's how to identify space
where is God and the Action of God

then here it turns out
that space must have
a function of some autonomous Action
i.e. move outside the system
i.e. to be in some phase of control over the system
as if in the system of organization of some space

if you think about it

what from God's point of view
after all, all processes are equal
which means it turns out that we can do it quite well
Well, let's put the question this way
what then from the point of view of a sort of control point
where is the past organized for God?

we see that at this point of control
uniform mechanism
some information for the future can be realized yes
for example, there in the form of a task of the past

and it turns out that here is the movement
the movement itself and the magnitude of the movement as if
human action or the action of the human body
this is a structure that unites
for example the structure of the past tense
and the structure of the future tense there

then it turns out
that the development of the human physical body in general
there in the structure of future events
this is a constant movement of some tasks
which are formulated in the form of a logical status there
for the past
or are they a status issue?
Well as a human physical body

i.e. movement is constant movement
constant movement of a person
For example there in the system of future events
creates firstly
there is quite a concentrated amount of information there
for the future
and secondly, it very clearly declares those Laws
which connect
moving
with the structure of the past yes

it turns out that we can then fix
some one fact of past events
or just look at some picture
which reflects the plot of the past

remember , for example, some system

or concentrate
on some part of the physical body
for some time
and after that in a second
this concentration is as if in the past tense, yes it turns out

and in this way we will be able to clearly determine then
position of the future based on this explanation
as a system of Spiritual knowledge

i.e. we learn from the first perspective
in fact Spiritual status of actions
i.e. we see in fact precisely on the Spiritual level
is your physical body for example
in the future
i.e. what processes are taking place near it
where are the levels of solving your problems

and here, in order to distribute the control system
from the point of view of past events
in order to objectify the situation
namely the physical body in the future
must see
what is there, well, in general, it works first of all
Spiritual level control system
recognition of the physical body
in terms of the development of Eternal life in the physical body
this is a spiritual action

while the tasks
this is the action of the Soul
if the reference point is on past events

if the reference point is on events, for example, the current time
there, generally speaking, at the level of action
there may even be a change, even more so, on the contrary
p task for example criteria plan
there for Macrodevelopment

we see that if we do
initial control from current time
then here is precisely the action of the Soul
this is the recognition of the physical body

because Macrodevelopment

the physical body located, for example
here the question is actually quite specific and related to that
what is the Infinite status of the Soul
must perceive in the Infinite World
the physical body that is located
For example well in Infinite information
and for example is part of the Soul there

i.e. it turns out from the point of view of the useful action
The Soul works here
while the Spiritual basis
this is the definition of the event line

and if we consider for the future process
then here you can see that the point of identification
and events
and the physical body
in fact they are very close for example

and it turns out that here
Soul and Spirit of Man
in Infinite Distance
actually do the same job
i.e. the human body
for example Human Consciousness
i.e. there is an integration of various systems
relating to the personality of a person

and then from this we can clearly see
what is the process of action for example
which is defined as a process
considering the future based on the past
it goes through a signal transformation change
as if a signal of a different polarity in the current time

and the transmission of this signal
from the point of view of unifying the two systems, yes
i.e. well it looks like this means a variant close to the "eight"
"eights" in Infinity

then it turns out that based on the level of action
the signal in the past must match
signal in the future
for God it works out
i.e. God excludes time

and considering that the signal is different
then God must see well like that status
which practically does not change yes
what status does not change the status of the Soul of a person
which is aimed specifically at the structure of Eternal knowledge

and it turns out that here if we, for example , develop
management we assume in Infinite development
then it is clear that God does not find the Eternal Soul of man there
i.e. having the level of one Soul of a person in Perception
there or means passing into the structure
actions of all the people there
i.e. all Souls act at the level of Eternal development

He defines
namely the personal constant of human behavior
where Eternity is His location
in space and time

and when a person in a personal sense
united with other people
understands
that its location is Eternal Development

it turns out that we have practically a place
which is defined specifically then
from a person
but from God's point of view yes

if he starts for example
do management this way
that this place is as if defined
as a place going well as if in development
both future events and past events

after all, events develop from God, it turns out
both in the past and in the future
God is at the epicenter
and it turns out that He is at the same time, yes, here
there is a logical system of knowledge
that future events develop simultaneously

then it turns out that He must somehow synchronize
these events

i.e. He must mean well memories of a person yes
to put in a certain sequence
that would connect the events of his past
with the future

i.e. he remembers, therefore he is a person
what did he want in the past and why
certain criteria for its subsequent development
those are the ones that are determined in the future
what did he want to do there in the past

this line is as if formed by God
as the structure of the human body's action

i.e. where, for example, a person makes a living
By the way, this is a powerful mechanism for healing people
if you look at the level of communication
not by way of cause and effect
and by means of such an external, as it were, abstract analysis
that the line of Thinking corresponds to past processes
and processes, for example, of the future tense
This line reflects precisely the physiological factor
human actions
i.e. it precisely reflects the level of physiological reaction there

it turns out that if we assume we start to act
here from the level of physiology
i.e. from the level of Health Standards

it turns out that the criterion of the inverse value
i.e. God perceives the Norm of human health
and then it is realized
both past and future tense

i.e. for God the unification of the past and the future
occurs actually in the physical body of a person

so for God man exists
here in His personal Perception
present tense only

i.e. well, basically every person
this is where a person perceives closer
closer means to the present time

but there is one nuance there
i.e. it's close but not quite
that which corresponds to the present time
this process is greater than the next human action

and it turns out that if we consider
this process is close enough or something
then i.e. Perception brings closer
and we increase the detail of knowledge

then it turns out that it is the future tense
i.e. the point of the future
it is a very specific place of control
i.e. it turns out that we are absolutely certain
we can know the future
if we have the same message
impulse as if Perception
to any information
so to the information of the past
as well as to future information

and it turns out that if we have, for example , as a task
definition as if detection of past events or future ones
precisely its own process of Consciousness
it's not something that can be determined
place of the event in the future
already with a defining context of events
i.e. you are purchasing a sample
and improve events

we need a signal
from one past event
walked at the same speed
with the same concentration
as well as a signal from possible future events of the whole future

i.e. you have diagnosed your location in the future
you can do a simple thing
there logically imagine yourself somewhere
well you are there in the store or in some specific place
i.e. so that it would be better
there was such a popular public place
so that some external events would happen

and get from this place

there is such a fast instant signal
structure of past events

this means some of the information gets through
to the information of the past
which falls into the system of future events
signal
and you see your prognostic place
determined by your goal

i.e. the place still doesn't lead to the person
that he might be there in some city
he has things to do, which means he ended up in any other city
and this is unlikely

but if for example he doesn't say there is a rule, he won't set it like that
here the definition of events is not always needed
in the structure of a kind of direct vision
from the point of view of a random variable

i.e. not just watch
for any event in the world, for example
and control over your location in the future yes
i.e. it is still control over the execution of the task

it turns out to be a control system
included
into the primary task system

the correction system has already been introduced
if we manage through the past
event correction system it has already been introduced
into the structure of past events

i.e. there is no need to specifically correlate events
so that the event we need happens
we just need to see then
your position in the future

past emphasis on the past where the goal is defined
this is already management of future events
from the point of view of the goal, yes, in fact, it works

and based on this
if we start doing management for example

coming from the structure of the use of the past
then we see that, for example, Infinite distance into the future
in the current time ^{yes}
turns into a system of the present

here is just the reverse problem
this "eight" if you compress it
at one point in the center of symmetry
it turns out that in order to get information
there ^{for example} Infinite Future
it is enough to compress the concentration of information very strongly

i.e. to be able to some one point of the future
project
on all information of the past

then there is a reverse move
more sparse information of the past
gradually transitions
into concentrated information of the future
i.e. the number of events increases
^{Well,} that's what people usually do
for the main system of Perception

i.e. the number of objects increases
and it turns out that the future
this is a more concentrated level of events

so there is such a level
that shaping the future
this is an increase in the concentration of events
to the past

it means to form some kind of impulse in the future
influence the future
through the structure of the past
you just need to increase the concentration of events in the past

i.e. you need to see more events in the past
i.e. for example, ^{let's say} you know the events
there are some publications in the past
there is some kind of media information
what was happening in the whole world

so to increase control

from the present to the past
you also need to see the manager, for example, with clairvoyance
that existed around man
at this moment
at the level of a kind of existence
near his physical body so to speak

and that's when we start looking at this option
it turns out that we have such a control factor
what can be developed means controlling clairvoyance
in the structure of past events yes
even predictively managing

i.e. it is possible to use prognostics in the past
i.e. for example you can watch
what's near you
and predictively expect that in the past
then for example at a distance from you there it fits into [...]

and then it turns out that you are on the structure of the past
you can learn as if in a training version
means to work on determining future events

i.e. the greater the number of times
you work through the past
and get information
as if of such a generalized nature
the more information you get about the future time

and it turns out that if you start
do management this way
what do you want for example there in the future
more prolonged find out
about your future events
you need a concentration of information from the past
It is best to increase this vector

i.e. you need to know then
what future event
which information carrier of the past corresponds

in a mechanical sense , perhaps?
it is enough to take a piece of information from the past
just like passing it on to the future
and it starts working as a future event

at the same time that certain piece there
which we took out there from the past as information
he shouldn't change anything
information of the past

i.e. nothing changes
you are simply changing the knowledge system
i.e. the present is more like the work of Consciousness, yes it turns out

i.e. from God's point of view this is a manifestation of knowledge
the present is a system of manifestation of knowledge

and then we can track it
moreover, this is precisely an informational level
there is optically understandable knowledge

then determine the source
i.e. where does the primary impulse of information come from?
on some problem yes on some task
where we have the final level of information there

and this is where the option of place arises
where the human physical body is built

for example, here is the problem: God recreated Himself
where He built His Physical Body
as He is
at the information level

it turns out that this is exactly the place
where the physical body can be self-recreated
it's in the transition system
from the past there to the future
where the present is manifested
the level of manifestation of knowledge necessary for a person
i.e. the present is that
well, it turns out that's what a person needs the most, yes
in this understanding, in a logical way

and then it is clear that the person there, let's say
is approximately in the same direct interval with all
because this is this collegial, as it were, real
what is most needed for everyone

if someone gets there
in the structure of future events there, for example
or from there, well there, he sees with his Consciousness

then it turns out he learned to separate
factors more necessary
with factors that are not needed, for example
well, how technologically or in the future determining

i.e. he learned it, it turns out simple
make Perception more neutral
in relation to any factor of its tasks
as to the most pressing ones let's say to the tasks
which are manifested through the collective Consciousness
which is more pressing
or also according to the tasks of the future or the past

so here's how to learn
perceive tasks in the same way
current time and future
it is necessary to carry out the so-called there
a distant focus on past events

i.e. a concentration is made where the main element is
[...] management
is to receive reflected light of past events
natural light should be neutral

anyway, you yourself [...] in terms of current elements
you can make it neutral

then it turns out to be at the present time
you get into the space factor
and not just knowledge
information factor
there objectified in the system of Reality

and it turns out that with such management
we can see very clearly
as if the next angle of action
that the factor is precisely the origin
of this Reality in the present time
this is the transformation of knowledge
in human perception
some forms of information

i.e. God perceives information
and leaves his own knowledge
gets Reality

means to create Reality
you need to leave knowledge first
then get for example a signal from the past
and then get a quality level
Well, well as if the very detection of this knowledge
a person need this or that knowledge, for example?
i.e. the purpose of obtaining knowledge

and then we see that in this way
By the way, you can improve a person's health there
i.e. to grow organs there, for example
there, first of all, high-quality resection, etc.

i.e. the ability to work at the level of creating a system
always a pretty useful control feature

and when do you start to determine
structure positional structure of the future
it turns out that the ability to accurately determine
level of those tasks for example
which relate to management tasks
i.e. precision is needed in order to understand exactly
what impulse in the past are you doing where

i.e. it turns out that the level of management here is like this
what you can see for example exactly
what do you have in the past
what events are involved in that
so that there is information in the future

because in essence it is the past
as a support system for future events
and there are no such long-term system ruptures

i.e. the ability to see
what situation of the past as a whole was revealed let's say yes
defines an event in the future here
in specific parts there
This is a fairly important control element.
which actually works like this

what are you starting to see
the status of these direct connections
past and future

i.e. when you start seeing the status
then the so-called visions
Well let's say localized in interaction systems
basically autonomously, so to speak
autonomous section of the past
organizes an autonomous section of the future

i.e. it means it works
well, it also looks like this geometric shape
means close in projection to the "eight"
but the left part is more extended

so then it turns out that if we start
here is a complete cross-section study
then we see that the intersection
it is precisely this "eight" where it converges

current time
this is precisely the place of expansion of the Reality system
it works out in this regard
well really we are talking
that the physical Universe is expanding there

and when we start exploring
these are the boundaries of the past and future
and we are considering this projection option of actions

i.e. it means some element of the past
it works
on the structure of future events

and also in this structure of events
we see such a level that it exists
and projection
and the action itself

then we see that the information level of the event
from the past
means the event itself
but in the past such
the event itself happened, we remember, for example Yes

this is the information level of events
but the event did happen
this level also means an event for God, for example

then it is clear that God can events of the past
organize
from current time information
feedback

if there is an informational and factual level
He can simply take and separate the facts
and that's all
and then a person perceives the factual level

so it turns out that for a person
Perception of the past
this is the task of God's selection
his this very construction of the past

i.e. in terms of interaction with God
man is looking at
namely the event line of the whole past

that's when it turns out in front of a person
all the facts of past events are visible
if it has at least one past event

and then it turns out from this logic
at the current time level
a person is able to distinguish
all the facts of future events
since it has factually past events
at the primary level of action of the past as such
from God's point of view

then it turns out that in the future
as for example in God's Action
it considers all future processes
as one and indivisible
single information center for example
but also private and disunited specific ones
some cause and effect relationships

but then comes the level
it is the level of realization of cause-and-effect relationships

it turns out that here we have
in fact, in general, a system of such action
what are causal systems
well often with which the information is connected there
with the future tense there with the past, etc.

many of them exist as if outside of time intervals
you just need to study and understand
what events, for example, and where do they concern
namely intervals of absence of time there
and the absence of, for example, a series of events

because the primary level of God's Consciousness is such
that the sequence of events was missing [...]

it turns out that then we have
this perspective of perception
what if we consider
for example, the level of creation of the information itself
then the unification of past and future events there
consists precisely in that
as for the creation of any information
past and future
will be [...] mechanically united

and here is the unification
precisely at the level of absence of events
gives the opportunity to understand
what if God's Action is Infinite
in each local single impulse

then it turns out that the local impulse
for God
gives the opportunity to receive in the future
a fairly specific picture
there are generally no future events
primarily of a creative type

but to get exactly the creative type
here through the management there is personal management
future events need to happen
should have been
they are tied there quite tightly
on the system of those past values
which systemically except for there man

or there are the Souls of man
pass into the future unchanged

because it's against God
for example, there is an information object in operation there
he moved forward a second
for example, you can consider there
there is a drop of some element of the physical world
here he comes a second ahead
and he actually didn't change

then it turns out that we can have
the body's recovery system , for example
as a system of personal human action

i.e. every personal action is any
associated with the manifestation of any action
wish
this is a healing system in this case

and if we set the task in this way
then the question simply arises
how technologically knowing this
to get healthier at the moment of execution
any kind of work, well any
i.e. you should see the future then absolutely accurately
from the event that needs to be influenced

and work
through the level of all events from the current time for example Yes
to the level required
how exactly is the level of recovery there, for example

then it turns out that we basically see
control in this way
what when you act
for example, by management level
where health is only one element
if you need to do some healing of course
or simply the Norm of Events
This is one of the controls

it is precisely the structure of the past and future
means expressed in the fact that the present tense
it does vary somehow, yes

if [...] past into future

then here we can highlight
such a thought in management
what in order to vary
future tense structure
in the form of the past from the present
Of course you need to have a return signal
i.e. present tense
but exactly the same mechanical one as I said at the beginning
separation of past and future
in terms of lack of events
allows you to vary the controls
past and future tense
to determine the exact structure of diagnostics
in making decisions already at the place of the future

i.e. a person being in the future
and taking control
and internally, practically from its status
because through the element of Consciousness
which is now in the future
and is realized as a human action

here it turns out that the element
such management
that a person begins to work, actually, as it were, yes
in that future tense

and the basis of its work is that
how did he work in the past tense
well, at the level of , for example, Thinking, etc.

and then it turns out that there is uniformity
it is expressed in human action
i.e. the general level of transition
from past events to future level
this is the action of the person himself

and it turns out that any level of transition
from the point of view of Eternal development
it is a combination of human action
with the system of Eternal development

if there is no such connection

then the past future turns out to be discrete
and the control task is not realized
everything goes without external control
i.e. well, it can be quite chaotic, yes, it works out

if we begin to outline future events
as events, as if prognostic, necessarily certain
then here is the exact location
a person in an event system
it is always the identification of the actual prognostic phase
that we must find our exact place
and also to find as if in a non-logical level
i.e. it is one thing for a person to have a logical level
as i said he may not be there in another level
because here the plan is for example in one city

but this same status must be confirmed
direct control
for example you don't have any information on the location yes
according to your exact location

then you get an informative forecast
he should have given that you are there
exactly in the place that you choose in the future, for example

and here of course there is another point of interest
what is possible and so it is possible to solve it there in general
considering positions such
that as soon as you look
where are you in the future
you can change your mind
for example, there is no spreading into this future, yes
in management

but here the question of the logical level arises
why did you perceive the information of your future
exactly like that

i.e. if we consider
then it turns out that in order for there to be a different future yes
well, which you, for example, know in general but not in detail

then it turns out that the impulse is embedded in the past
actually comes to the structure of contact
well in the same past but in the sector of the future

and it turns out that the impulse is passing into the future
returns to the past tense
if you have enough time
for the implementation of the management goal there

then it turns out that's what's going on here
it is precisely the level of structural management organization there
and the future begins to come true
because there is a constant influence
from [...] past events

and considering that every person
collides all the time
with a certain system of past knowledge, for example
some kind of technologies , etc.
but the ability to apply these technologies
in each specific situation
except when technology works
and it is clear that always yes for example it can be sometimes
can be applied for the future
technologies are manifested for example there in the current time

it turns out that this is the skill to apply
this is the level that allows
and also how to track
where does the application come from
i.e. where does the primary thought come from?
on the application of the control system

example, if we are talking about human health improvement
then we can consider
primary system of actions
i.e. where does the level of, so to speak, primary knowledge come from?
about how to improve your health

Well , for example, there a person has this knowledge, yes
first of all
the one you are healing

and that's when you take a closer look
it turns out that that person has
Well, because he has a certain experience of past development
he saw healthy people
there he saw the information of the World

where is there for example a healthy person

Well, it turns out that it is the support level
is like a collective action
aimed , in general, at ensuring that areas of the past
were also unified by the same method
as well as areas of the future

when do we start the equalization system
for diagnostics [...]
we see that the structure of the past
in fact, it is a system that allows
not only there with the support well how to control positions yes
future processes

but it also allows, generally speaking, to implement
the structure of the present
is a platform for some plans there
which in any case, let's assume, are carried out there, etc.
previous experience
does it really matter
for the implementation of some there
at the physical level on control

and that's when we start doing management this way
what does the system of all future events mean
which you need
rigidly defined system in the past
then we can make a certain map of past events
to achieve the goal of the future
and put the structure of the real ones there
or the next steps are taken by the manager there

we can still clearly and systematically
in each specific case
each one to create for himself
a system of such management
what do you initially see
where does the information that is formed come from

i.e. you participate in the formation of information
past there you take some information as if
if it is precisely from the point of view
personal Infinite future development

and you form a site at the moment of action in the future
well, just like God does
unites the past future at the point of Action
and it turns out that the Action is widespread
on the structure of the past
to act on the structure of the future

and the action system
regardless of the level that can be controlled

and there may be
or direct action of God
or for example you can develop it there
some kind of technological control mechanism

and it turns out that if we want
coordinate system in the future
define as a system of exact relationships
i.e. we need to do it this way
so that in the future we too could not just
for example there control see manage
but could also build neighboring positions in the future
for other people

then we get the structure of the past
should be generally designed
i.e. in the realized World
must also fall into the structure of the past
and as I said at the level of thought there
make management more [...]

then it turns out
that as soon as the past is objectified [...]
Well, favorable means the past, for example

then it turns out that we can do it like this
that then there will be no unfavorable past

because the future event
can be made always positive

then it turns out that under any control of events
you can always get to that level
that the past is no longer precisely unfavorable ^{yes}
i.e. remove the event from the version if it is unfavorable

can you use this version of the system of past events
withdraw

Well, at the level of Perception of course
there the human memory remains
that the events of the past were for example there are some negative ones there

and if you put this into control
then future events may improve quite well
and from the point of view of, for example, the reverse process
for treatment processes and in the present time
you can get this instant result for example

then here we get exactly the opposite problem
overlap i.e. translation of information of the future
into the past
through the present tense
allows you to solve exactly this problem
well, that level of management

then it turns out if we start
let's assume to do the control in this way
that we need to ensure everyone's safety
as if the final development and consider
your specific coordinates in the future
i.e. what should the manager himself do in the future?

then it turns out that it is precisely reliable knowledge
about your location
there is a level of consideration of personal factors
where in the present tense
agrees that in the future
Well, maybe it will show up somewhere there

and it turns out that you are participating
already in the system of collective Consciousness
which this level allows you to build
like an intermediate bridge
between future events
and the current there [...] of the present

i.e. from God's point of view
the reference level of any other person there
any other person
allows you to build a bridge

between current and future events

it means a person and the realization of a person
this is actually the structure of the development of the future
for God

and when we begin to see this process
we can see that it can be quite straightforward
from the point of view of understanding the place of the process of action there

i.e. what is meant here is
what is there for example Thinking and Perception in the future
must be absolutely clearly defined
in information
to understand what is happening
at the level of so to speak Macromanagement
at the level of local government
and understand what is really happening
around this person
there or some situation
the ability to see everything clearly and reliably

and when we start to connect this system
bring into the system of general management
it turns out that we are passing on knowledge, for example
on Eternal Development
we can fully transfer knowledge
taking into account any constructions of the past tense

To do this you just need to switch to management
from one status to another
i.e. to be able to output control so
so that the construction of the past is not distinguishable in any way
well, did it have any difference?
from the design of the future
i.e. in terms of development or fundamental ideas

then it turns out that the main thing in this case
this is an ideological level
which allows you to keep the control technology there

if for example there is no ideological level
in this management plan
then it turns out that we can
if we take the task neutrally

means to bring it to the level of ideology
i.e. the achievement of the level of Eternal development there
for each specific control object

then it turns out that we can
bring up the control level
to the level of primary ideology there

i.e. we can well consider
what is the primary ideology
can be completely different yes

i.e. the primary level of any ideology
it can be exactly like that
which, let's say, does not concern the management goals
and ideology can be the exact opposite

i.e. you need to improve something
but you can improve
on the field of as if negative information

and therefore it turns out that the main point
in the past there can be anything
but in the future it may definitely be positive

because it works here
what exactly is the meaning of management through the past
is that if there is ideology there
which determines management
for example, it is negative there, it is sharply negative
differently

it turns out that in the future there will be this same system
even if it's local, it's changing for the better there
there it changes for the better for you personally

and based on this we can say
that even there are sharply negative systems
which are recorded as a negative example
in the past of course they may have manifested themselves there
with a certain level of information volume

and for the future it could just be a platform
for a favorable level of development of the situation

and it turns out that if we start
do management this way
what we need as if independently of the past
get what is there most positively in the future
for example, there are nuclear weapons there
but we get it regardless
that it never really works there in the future

it turns out that here there are already certain mechanisms
means control output
to the level of specific technological disciplines

here you can already see that the level of management is like this
that you begin to perceive the technology of management
as a technology of that level of Eternal development
which is most typical for you

i.e. you can see
what technology for example there is development
some element of Reality
she's somehow unique
for example, there is development technology
some process [...] individually naturally

and it turns out that we are for that
for example, to cure a person there
from the point of view of managing the structure of the past
we must see the difference in access technologies
to human systems

i.e. in every human system in every cell
[...] management

and when a person understands
that you can provide for someone
for example there in Eternal development and correct access
then it begins to be realized in this way
that it is favorable for him there [...] to work with him
according to the level of Eternal development there, yes
then it turns out the fastest
you get information for yourself
precisely favorable

and considering that the management itself
from the point of view of the logic of the process, well, that's it

that we must ensure in any case
predictive control

it turns out that here is the prognosis itself
i.e. obtaining accurate prognostics
this is still everyone's personal work
who participates in the future events management system

i.e. it turns out that a person
must clearly see his task
in the system of collective Consciousness

because the past is a collective Consciousness
which is implemented there well there for example in the event system

collective consciousness
includes God Consciousness

when we start looking further into the future
then it turns out that based on this
we can see the following status
that a person has his own specific tasks
in the system of collective Consciousness

and it turns out that this is exactly the task
it is generally defined as a task that needs to be understood
from the point of view of the task for people
in this understanding it can be
well maybe there is a task to see there, for example, civilizations, yes
so that there is no global destruction

see the tasks of each specific person
or there are situational tasks, there are game tasks, etc.

and then it turns out that the level of tasks, for example ,
forms and the level of precision of action
this is the task of Macro-creation
requires precise action
in elementary things

i.e. then the prognosis is absolutely accurate
even in elementary things
because the tasks of Macro-creation
requires special treatment
there is no time to waste there

to know something and to achieve something, let's say , for a long time

i.e. based on this it turns out
what else do you need to be able to plan the management goal

we do not always do it through Macro-creation according to my Teaching
just when we talk about it
in such cases you remember these technologies again
that's exactly for Macrosalvation

after all, the technologies themselves contain an element of control

i.e. here we must very clearly define the concept
how do we perceive at all
information as such
For example there is information about the restructuring of death yes
what does this information look like that there is no death
no, that means there are no close pathological processes there

this is basically information that relates
to the system of the past
that's if we start to restructure it
people living at the present time
these are already living people

i.e. it turns out in the current and future tense
from the point of view of Eternal development
people always living yes

if we extract information from the past
on restructuring of destructuring of the body

then it turns out that they are future and not just living ones
but as if formally, unlike the previous information

i.e. it turns out that we simply single out the past in ourselves
we receive in the future
For example there is an element of resurrection, an element of healing
element of simple Thinking
ability to work simultaneously
according to the level of information there
in different directions
actually allows one to act in this way
that for example any information, even negative
may have a positive experience there

namely [...] collective action
can be learned from negative information

and then it turns out that we have
that management structure
which characterizes the seemingly endless growth of events
in the future

this is how it is from God's point of view
come up to the level
technologies for the development of information of the future
develop this information there, for example ?

it's clear that this is well, it means the level is like that
that it develops within itself
if we go from the level of God's Action
then nothing develops by itself

how is the similarity of information
for example there is a future

it turns out that here in the collective Consciousness
additional status is recorded all the time
which leads to that
what is needed to actually in the future
status of collective Consciousness according to primary goal
was very strongly defined there

then we hold
the exact coordinates of events there in the future
increase well how to increase by a level
on the actual projection system

i.e. you can see
where is this event projected
and then have the status of an event action
if we get the exact coordinate

the exact coordinate itself is the structure of the action
after all, God acts in absolute space
It turns out that it is
It is enough for him to determine the coordinate
this is His Action

and therefore it turns out that based on this management

so we get ^{well} enough like this
a simple picture of management
which characterizes is the
that the status of Action ^{for example} God
this is the structure of the association
^{for example} information through the present tense
but in such conditions what do we have
structure of actions
through the past and present

i.e. in fact we can say
if we want to know for sure
the structure of the future management there
future events of yours
and not in a logical form
and in the form there are form view elements
analytical spiritual vision

we must see how the system of the future
there infinitely quickly strives ^{for example}
to the system of the past
or to the system of the present

and see how the present expands
physically see it
see the expansion of events of the present

if you look closely at that
how does Perception work ^{anyway}
from the point of view of a simple task, ^{for example, yes}
control tasks by regions

we usually don't see it there right away [...]
this can be done too
but the type itself [...] see the point which is the extension [...] ^{for example}
[...]

and then in fact, ^{well,} they are allowed
some investigative links
because this situation is gradually developing

then it turns out that if we start
do management this way
that future events are practically determined
as a system of Infinite connections

then we see that receiving any local event
this is a skill Infinite some kind of system
there to wrap it up as if, i.e. to implement
in a system of some number of future events
equalized events

i.e. it is clear that we can trace the mechanism
in the implementation of future events
namely the Infinite Phase

but if we consider the Infinite phase
then we can say that there are different ones there
for example there is plus minus Infinity

i.e. we can identify
structure of the organization of actions
and provide the Endless events of the past
well, just at least local events of the past

then we can have in control concentration
it means some event of the past
there is a technology of future events
this point needs to be sort of revealed
i.e. it means simply increasing the size

the event can be anything
here is the increase in size
outside the outer wall, so to speak
like this level of management
if there is some kind of geometric shape there
we are increasing the size

it turns out that the movement of the element of the past
there in the system of the future
allows you to create a form
which primarily has the form of a human being
and then it transforms
separation of man into all communication systems

i.e. if an element of the past is transferred to the future
first into human form
then the separation again I repeat myself
means systems of some external World

the thing is that in this way

to be for a long time means in the future
or there through the past for example
and receives a system of elements of Reality
that's what a person sees in front of him
how his future events are developing
from the current time

i.e. literally, and you can see it right in the sectors
there, as it unfolds before him, there is a road along which he walks
exactly how a particular event is going
you can see where the information segment comes from

and you can treat the platform on which they are located
for example, treat with developmental structure
for example, the controlling clairvoyance

i.e. it is possible to actually treat there if there is time
all systems of interaction
for some specific task yes
well or for some specific one
Well, there are systems that have been identified and recorded there.
for example, there in the form of photographs, etc.

then it turns out that if you start
such a process to visualize and understand
these structures are the form of development of this situation

then it turns out that we already
in our own words we can teach so to speak
later analyze all investigative systems
from the point of view it's not even that there is some kind of cause and effect
and [...] from the point of view of primary data the most primary
well, sort of the root cause, yes

then we proceed from this training
we can develop management further
and then in principle there won't be any special problems
there will be no management
in terms of achieving the correct goals there
i.e. for some specific short period of time

if we start in this sense
here are some philosophical aspects to consider
development of this information as if in a speculative version
when there is just consideration

your own signal

it turns out that we can highlight the following
we can perceive information
as information [...]
or we can use it as information about a certain process
then it turns out that as soon as we start
combine these two concepts
we can get
the structure of those future events
which are actually visualized in the past

i.e. to look at the future through the lens of the past , so to speak

and the past can be used as an amplifier
to view future events

and here it turns out that we can
just like God works
He can specifically organize the counter impulse
just like we say coming from you
can organize a system of those Infinite connections
that are related to you personally

and it turns out if your location
how some kind of lighthouse determines
determines the following positions
the current level
from you
and to you
concentrated somewhere in one place
near your physical body

then it turns out that all events are concentrated there
all the solutions are given there
and so a person as a whole can track
level so to speak well, is it some kind of plan to realize his personal
what should he monitor in this case
the whole process related to his actions
as well as considering the process
which relates to any other action
i.e. aligning yourself, for example
in the future [...] level of events

when do you start the process of recognizing

from the point of view of alignment
with a line of action for example to you
and then align
from the point of view of the line of action from you

then you see that God is present
He is in that place
where you say asked yes

i.e. it turns out you start to see
what you can mean to manage
well, that is, to manage the situation in the World like this
what can you ask God for example
help to do something and help comes [...]

then we see that help is given
what did you learn there, for example , and then

but in the process of action, learning also occurs
and this is the training
i.e. as a kind of system, in general, of a primary reaction
it should be distributed
to the level for example as if information systems
to the level of some physical systems

and then it turns out
that based on the usual social management tasks
you can see exact future events
according to the tasks of the Norms of these [...] systems
let's assume there are information systems

if we start to see this level of prognostication
how the future is determined
then your manager

then here you can see by the way
how is management organized here
here you can transfer it to control via a number
for example , there are your future events
so that they would be favorable yes
so there in Infinite time

you need to see the availability status
for example, these tasks mean
and then you go and make a universal control

for everyone

your task as I said is management for everyone
just put numbers
numbers like this for example 4 9 7 1 8 9 4
fixing the point of the future
near the physical body of a person

and the next row
you need to have health records there
i.e. you definitely need to watch it
how to fix from the point of view of the past
namely the structure of human health

and then it turns out we can have only three numbers
7 1 9 yes
here we are transferring through information of the past
just three numbers 7 1 9
into the structure of the future
looking at yourself in the future
we have we have a constant level
this one is well healing
for those who need to improve their health

but the only technology
in case [...] technology
look through the events of the past
as through the prism of events

if we look straight into the future
then there is another row
if you look directly into the future without the past
then there is a row 8 8 9 three numbers
and then after a few seconds
another 8 is added

it turns out that there are different types of viewing
provides a different system of information transmission
from the current time

and so it turns out from God's point of view
if we consider management
That's what he did with the management.
where is the difference in information transfer
forms the structure of health

i.e. it turns out to be human health
multivariately expressed information of a person in essence

and based on this, it means in this information
all possibilities found
which God has for the realization of human health
for example in the future tense

as soon as a person begins to think about it
he sees that the process of implementation
for example , in the future tense he is like this
what are you starting to see
the structure of your own movements
even if you don't set logical tasks, for example
i.e. you look there and see that it is somewhere
for example there in tomorrow
or even for many years ahead

then it turns out that here arises
the status of such a seemingly positive plan

for example, for God
He will look there through the element of Consciousness.
and saw myself there in the future
how can he perceive such a condition
after all, He is constantly in touch with His future
just like a person in principle

what it has in the preview version
this is the level of his personal freedom
that's what happened
and he already saw it well as if confirmation
with technological capabilities

and the second thing is that he agreed with it

this is when the element of Consciousness comes
that's exactly it how does the management work?
that the person actually agreed

it turns out that we basically
should see very clearly
next management status
that the principle of consent forms very clearly

field means events where the status of events is not defined
you can do whatever you want with this status
there, well, how to mold any event, let's say, like plasticine [...]

here you always agree to have in the future
if you agree, then an event field appears
and you do something [...] i.e. you make any event
good of course

so the question is
what is it that a person needs for example Yes
he can track information
as far as he is concerned
but you are not looking at yourself, for example
This is generally speaking a fundamentally important thing
in this management

you can see what concerns a person
but in fact what happens is this
what does it mean that he tracks external information
but in fact, it does not affect itself
he wants to live in the current time
and that is information of the future
and it just influences her, it turns out

in this case i'm talking about
what a person sees himself as

then it turns out that he should
your information
to dock
with external event information

external neutral information
and personal is information about the location of the physical body

reflected signal
which comes from the physical body for example
it also hits you
you are the source it turns out
and a receiver of its own signal

and therefore in management there is control over the physical body
it happens often, well, in general, it's rare [...]

i.e. God, why, for example, doesn't constantly control a person

because the task is essentially the same
creations of God's man
it has a reflected signal
i.e. it actually has its own status yes

and it turns out that based on this
such a signal as a system for the formation of the whole World
has the ability to pass for example once
and next time you need to enter the next signal again

so control yourself in the future
through the structure of past events
it's a system of sorts of periodic access

because you have to constantly watch yourself there, yes
here you are in the future
we went here and moved here and there
there they described some kind of scheme, compared it, it matches, for example Yes

act find this scheme until it becomes transparent
not a pulse level but a constant one

you can do it like this
that others [...] information of the past
was higher than geometric
i.e. location matters
this lens of the past, so to speak

if on the left side then it is the periodic table
access to information about yourself
on the left it is linear i.e. they just didn't throw it there

then it turns out that based on this management
we see the following status
what else can we look at, for example, on the right side

then it turns out that this is signal transmission information
from the past as if located in the future
back to the past even better future signal
in the past in the present time

here we begin to draw such a picture
that the person is

in an independent , free form and does whatever he wants
and events are developing favorably
because we look right _{yes}

on the right, i.e. we understand the viewing mechanism
and we know what follows from this

and that's when you essentially find yourself
see your own essence
in the future
maybe for God
what will happen in the future what will happen in private
It's all the same to him

and here the approach begins
i.e. God begins to approach you

i.e. you are getting closer to yourself
and just like God has
there is also, _{as it were,} a single point of self-awareness
where are the future events
Current events
everything is virtually everywhere
including in the past tense
you begin to influence the past time

i.e. negative factors are possible
thus minimize
consequences of negative factors
influencing the past in this way

because you _{well as if} you are blocking the structure of the limb
which is in the present tense structure
personality she is always more [...] always alone
there are some [...] systems there

working through the structure of the past
you're just _{kind of} distracted , _{yeah}
i.e. past then future
you make some extra moves it turns out

and when do you start to group
and take control more towards yourself
then it turns out that you are actually leaving
_{as if} in such a mono state that influences the past

as a system preceding management

this is when we enter
into this system of previous management
then it turns out that God in order to create
every future element of Reality
He was constantly entering the system of the past.
and from there he created a management system
one of the methods of creating information of the future

why look for some extra space
to invent something there
it is enough to rely on the structure of the past
and we get a system for future development

and based on this, if we consider
level of control thus
that the past is a reference point
to create future events
then logically it is clear that there is an inextricable connection, ^{yes}
past and future

but this interval is discrete
for example, there God is the Creator
just take and create the future and that's it
and there is something like the past is a completely separate construct
and let's divide the management there as a whole ^{yes} [...]

it turns out that with such a [...] hypothetical problem
the present is located
as if a sharply informative intervention
because the new systems section
requires filling in the events of the present

there you are in past events
clear new information
there is logically more of the future, ^{yes}, there is simply more of it
and therefore the information is saturated

and if we separate them
then the present will have to be saturated with something

and here comes the logical phase
logical phase of development
gives stability to the process of the Universe

that's why I say that collective Consciousness
is the determining factor, well, in reality, so to speak
where is the logic, i.e. the possibility of development of events
this is the expansion of the World there to the mental representation
which is what happens next in the material representation

it happens if you follow it
where does human thought go in general?
he thought
where does the information move next?

For example there arose the sphere of Thinking
we decided to think about something

First of all, what time do we think in?

if we work with the system of the past
from a physiological point of view
Yes, we work in the present tense.

but from a work point of view
we are in the future yes

we are working on the idea
where does it go next [...]
the structure of the movement this thought

it turns out that the thought is transformed
Well, if you look very carefully , yes
take there the sphere of thought
prohibit it with some optical systems
and watch how it transforms

we see that she is beginning to transform
in six variants

and it turns out that based on this
as soon as she transformed
the person seems to be calm
and Reality begins to realize

i.e. a person creates Reality
it's simple even logical

and based on this, if we start looking further
on the control system as if in this way
that we begin to sort of visualize
and watch in the present
where is this transition
from the structure of Thinking
in the management structure there space yes
where is the logic of this [...] expansion of the World as I said

it turns out that logical understanding is enough
two elements even of Reality
one level is next to another
this is generally some kind of logic to carry out in some event
we begin to influence Reality
through Thinking

and then it turns out
that we can naturally then influence ourselves

but that means the level of influence on oneself is the same
absolutely universal as for any other person
the difference is
that when committing identicalness, for example, management
what is the impulse that appeals to you
he's just yours
you lose virtually nothing in control

if you think about it, when implementing the control impulse
through the past
you have nothing to lose either
when you give other people management knowledge
you get even more information
there is also no loss of so-called "energy" there
or something like that

it turns out where it comes from then
here, if you think logically
where does the action come from yes
and why does the feeling arise well like transmissions
where could some kind of fatigue arise from, for example
there is aging, etc.
if you think about it like that
[...] there are no textbooks
in this management plan

you can even prove it directly formally
to disconnect these so-called
Well, we need thought forms to control
to connect the structure of space of the past and the future
it is clear that there is no [...]

it turns out that there is a projection level
from the systems implemented
here is the substructure of the past
where there are some unfavorable events ^{yes}

and this is the projection level
it forms the same aging system
also in the collective Consciousness
people observe that someone is getting old, etc., etc.

and if we turn on , well, we translate the control system like this
that we only take on everything
from the system of future events
time
in a fixed future of events

then we looked through the past to the future
and here we will take a future favorable event
let's introduce it into the structure of the past
so that it doesn't get filtered
these impulses ^{are} from the past

i.e. the future is favorable
and everything negative is possible from the past
is filtered is transformed
in the system of future events
but which are already in fact
in the space of the past

i.e. in a good future event
there the future is like a kind of purifier, ^{so to speak}
it works in the space of past events

and illuminating, ^{well, like} this outline [...] of events
we can see that the present is beginning
be visualized be determined
already independent of the current time
there as such which is connected there with the past
or is the current connected with the future

i.e. the present tense becomes self-determined
i.e. it was enough for God, ^{as} it turns out
mix the structure of the future with the past
get alignment system
and He gets the space of Self-Determination ^{yes}

those. self-awareness system
i.e. the personal principle of the present time
it is the ultimate and only determining factor

then it turns out
that the structure is precisely the Eternal development of Eternal life
i.e. self-determination of the system itself
for example, there is a man or God in Action
this is the main level that exists
^{as if} by itself
completely independent of either the past or the future

there is just a level that is Infinite there
he is the Eternal
and it turns out that this level
and there is a manifestation, first of all, of the Soul of man
in the present tense
where there is a collegial level
well, i.e. the material world

means the manifestation of the Spiritual World
where there is there is a clear level ^{yes}
i.e. clear as a manifestation
Human souls in the Spiritual World
associatively associated in the Spiritual world of all people
maybe in your own Spiritual World

and it turns out that we can have
in fact, the structure of absolute human health
in conditions when a person is self-determined

i.e. it is expressed differently
exact coordinates of a person
information in general

not only there in some physical future
and not only there in the Spiritual
and not only in the informative

i.e. not only in the system of Perception

and behind the systems of Perception

i.e. it is clear that a person can perceive something
but logically there is something that he does not perceive
just logically

although for a forecast that is very much [...] there
for example, controlling clairvoyance
such layers [...] external
so [...] can see
the whole Reality at once for example Yes

and then it turns out that even one sees it right away
it is still logical to assume
that something may not be of course

also happens [...] some
there's a plane flying over there [...] it's fixed there
there are no problems
it's not perceived as some kind of problem
why pay attention to it
the analogy of the Soul is still perceived

it turns out that if we look at it this way
control element
then the level including those control phases
where there is no, as it were, concentrating Perception

Well, there may be Perception by the Soul
in the level through the past
i.e. already in the future we can say
yes, if you predict
then at such and such a time there may be [...] planes

You can already look at it
here is all the space around it, look at it now
and say that there was half an hour ago
there was such a plane there
in another place the next one, etc.
or maybe people were just in such and such places

i.e. it turns out that based on this
we can say post factum yes in the future

and this element is next
what is the diagnosis of the past
possible if there is a future interval
i.e. we can consider the properties of the past

and now if we define this property
well how does the crystal grow there and what

so that the properties are not affected
the structure of human personality
in a negative sense, nothing at all
i.e. in any case, a person has it embedded
these interactions
then a person becomes Eternal Ever-living happy
i.e. it only performs its own tasks
and at the same time there is complete control
behind the system
in the interval there of future past events

I specifically derived the structure of the future
the future in this case is closer to man

that's how a person comes out
for the system of cause and effect relationships there
negatively influencing
then the future tense becomes closer

and then it turns out that we are geometrically
well, that is, at the level of Spiritual Perception
must understand why

a signal coming from the future is perceived faster
he can influence it faster
the process is quick to bring
to the level of Spiritual Perception
besides, Infinite

this means it can be leveled
any event to absolute Norm
and there won't be any problems there

it is precisely due to this that it continues
such Spiritual variation
Speed of Perception

then it turns out that the Eternal life of man
it's just his usual

Well in general, it is a fairly generalized state
connected only with the activity of his logic of Thinking
i.e. [...] just with any of his activities

then it turns out that this is the level of interaction
it is the level that provides
not only he there but also development
but every element of the development of the Eternal
gives Infinite experience
there for any other system
any other person

and then it turns out
that a person who is in this control system
controls the Infinite Future
because it doesn't depend
from the system of the past or the future
the future is simply as a contact system
on control and that's it
[...] creatively

and God too
It is in a phase where the level of events is favorable
lays out according to His will

and therefore it turns out that a person is
outside the system of these connections
can quite easily lay out
some there for example there [...]
there is an analytical system of action
there is a simple system of action
or is it complicated there, it doesn't matter
come up with events for himself, so to speak
implement it yourself

and in principle then there is already at the general level
well, like all the people who should be there
do not engage in management
are in the same phase of Perception
the only difference is that
that he makes up events for himself
he implements them himself

and it turns out that when he sort of comes out
to this level of management
then here it is just right to teach and pass on knowledge
Well as if it becomes simple enough

because there is no difference
between the technologist who influences
and to those who study
just now, for example, he is starting to learn how to influence there

because in this case the control base is the same
the level of socialization is the same
it can be transmitted through another system
any amount of creative knowledge
there is no difference in Perception

and then it turns out exactly
when development at any level is the same
what is high and what is general
that on some kind of enlightened, blessed, etc.

it turns out that here a person already has something created
universal mechanism
have Eternal life Eternal development
in any situational system
regardless of the level of knowledge of the external environment
any other people

another question is that he can live forever
but here is a guarantee that it will be
really have it there in billions of years
can only be in case
if there as I said there any person is ready for it [...] yes
That's for sure

and therefore, training means any person
and delivery through a direct control system
before mastering such technologically precise
in the political version very precise

use there the call of the past future
precisely control over the situation
so that a person understands and can do it
This is, in general, the main task of a manager
she guarantees this to everyone yes

this is the skill of Eternal development of Eternal life

so from the point of view of today's management
here is the logical fixation of the control status
out of time
through the structure of the past
there must have been such an autonomous level
Infinite development
and control over the Infinite level of events

if there is control
beyond the Infinite Event Level
then there are no questions at all
i.e. the person has definitely been living there forever

you just need
on information management
get in this state
this knowledge
what's in this management
control over the Infinite level of future events
there really is

this level is just like information

as soon as you start receiving this information
all certain events literally from the next moment
become harmonious

and this situation is already easier to spread
it turns out to be harmonious management
in Eternal development

This is where I end today's seminar.

Thank you very much for your attention
