

GRIGORY GRABOVOY
The Teaching about God
Building a spatial structure of the future
23.02.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Building a spatial structure of the future

in this topic i show
how to set up control like this
so that the events that you build in the future
included actual management
related to space
precisely with physical space

and if we look at management
already from the point of view of well as if the dynamics of events
it turns out that here we can distinguish the following spectrum

what if we have a temporary management structure
we are deducing
to the level of, so to speak, dynamic control
beyond the time of the past future there are current events
it's like a very fast dynamic level of development
time component of the event
leads to that
that we have a temporary component
in principle we can derive from the spectrum of events
and work only with space

so when i talk about building
namely, the spatial structure of the future
for example, spatial structure
this is a specific, for example, plane of events

temporary structure derived from the control spectrum
it is possible by means of control
in the structure of your Consciousness to deduce yes

then it turns out that we can
the structure of Consciousness
to be considered as a structure of spatial organization

and if we consider this subtext of management
that when we build some events in the future

we are basically forced to
treat space in the same way
as to any other management structure

i.e. well, if you look into the future for some time
then looking at some object
near which control takes place
spatial object yes for example a house or a road

we actually
after all, we perceive
how to create an image
in your Perception

and in this sense it turns out
that the construction of the event itself
in general it comes down to that
that we must also build the space of the event
i.e. where the event occurs
or it's a social event
or this is including even if this event
related there just for example there with the treatment of a person
which is located in a specific one place yes

and here we see, in general, a fundamental difference
between action
in relation to one individual
and for example, managing a complex of events there

as God does yes
He perceives a person at the beginning
here in any management status

i.e. if you look
how the Gaze of God spreads
then first He sees
well, he actually perceives it
He sees everything at once
namely, here is His wave of Perception
first concerns the first person
and then a system of spaces arises there

i.e. for Him, for God
a person is, as it were, singled out in spatial management

he is as if close to God
unlike for example there are other objects such as a building

for example, a person is inside a building
but God first perceives the fact

or gives in Perception
Myself to a person

and in the same way the construction of events in the future
it is necessary to do it by highlighting the structure
and even the external appearance of a person

i.e. we first select
the level is actually human or universal
and then we implement the construction of space

i.e. space is being built
in the subtext of a particular person's life

and that's when we start to analyze this structure
it turns out that around a person
as if space begins
first of all, in general, to spread, to form

and in fact, well, in such a petal-like form
information starts to spin
it is clearly visible in the form of silver control points there
well, like the Milky Way of the starry sky, yes

and the twisting begins
this petal type
and a concrete physical image emerges
or this building
or it's the same road
or it's a fountain pen, etc.

i.e. we can from a person
build
management structure of the future
if we fix it in principle
constructed part of the space

i.e. we can fix
for example the structure of space
to record a positive state of health there
in a person

i.e. having done the management, it means
For example there for human health improvement
we can, like, well, register, so to speak, in the future, yes
this situation
well, near some action
or the person is dressed in some clothes and space

there in case of external control
this is a person's clothing
or there is some place where it is located

and it is enough to fix some object
I have it as if in my memory, yes
Well, here's a piece of space
then we get the healing of a person
because we register
object of Reality
which corresponded to the person
at the moment of his recovery

and it turns out that we see
that initially human action
it is macro-creative and positive
i.e. in relation to any object
as if which as if registers the Norm yes
human condition
from the point of view of our external Perception

and on the other hand, this is the action
shows that it is often associative
the person seems to remember
some element of its events
and his future events are improving

well, that is, here it is clear that a person acts on an object
positively independently
and the object seems to record this information
i.e. it is like a means of transmitting information
to the outside world yes
an object that is near a person

it turns out that based on this
any object near a person
Well like a visualized plan, for example
or even of an immaterial nature

this is the transfer of information about yourself
somewhere in the external environment
actually to God

i.e. if we define
the trajectory of a person's movement ^{there}
how ^{so} means the logical scheme of his actions

i.e. why is a person located
in some specific place
then from the point of view of this methodology

namely the construction of the space of future events
you can see that a person is all the time
shows
through the structure of external space
Shows to God
your path ^{there} your research
and somehow synchronizes with God

i.e. it actually ^{means} Well, it is manifested in its actions
^{so for example} the neighboring building
this is the state of his Soul at this moment ^{yes}
reflected in space

i.e. his Soul
in the projection optical version
perceives itself most harmoniously within itself
this building
that's why he's here

i.e. here there is a connection between
The soul of man
by his Spirit
Consciousness
and what surrounds it

as a rule, a person develops in this way
he usually tries to be in those places
which he really needs ^{there}
or does he somehow do the management there
but the concept of "really needed"
it is still a state of the human Soul
he defines this state for himself
he may or may not be there going to that place

so in principle

human position
in many ways it is
his total wealth
the state of his personality
the state of the Soul, body, and Consciousness there

and it turns out that a person is to a greater extent
is always in the center
as if its central control
as if the root part of one's personality
by the expression of free will there

and it turns out that any point
are already micro-spaces here

in this case it is also a point that
well, in fact, a system for transforming human actions
to transmit a signal to all people there, to God, etc.

quite common there for example
Well, there are works of art there
they are, therefore, originally intended by the author

I mean "often" that the author puts in
this meaning is special
means they are intended for transmission
as much information as possible
to the external system yes

and the more intensively the author allows
Well how can I do this myself
Well, to the extent of talent, for example, yes
the more he does for people yes
and actually for myself too
It's like this back wave is coming from people

and here's by analogy with this
building the space of the future
in management
is based on the fact that each element
transmitted as much information as possible
about a specific person
and about all people taken together at once

then it turns out that we have
almost the same level of management
what can we see

how to build a management space in principle
here in my Perception
so that management can be implemented there as quickly as possible

because from the management as I said of this type
how we view the space of the future
implementation also depends, i.e. the speed of implementation
any processes due to that
that only a memory of this segment of space
gives positive control

i.e. in fact, it is possible to carry out management for a long, long time
implement and then get it simply
some segment some means Well as if a symbol
and just back into the structure of my memory
enter this symbol

and only concentration on this symbol
i.e. well, what you keep in memory
gives a positive outcome to the event

i.e. in fact you are doing
as if some kind of capture of the control center
even localization, let's say, in an autonomous region
where all events are normal
and as if you bring it to the current time

why does this happen anyway?
in this particular case
control through space
because the image of a person is a person in general
It's like you can't move it
he exists and lives
and therefore lives happily on his own
this is how God implemented the management
that a person, well, if he doesn't want to, he won't move
in management

and we are doing it
practically real systems
that's why we fix it
any level of space
near a positive event near a person
and we translate the image of this object
to my memory yes
and thus we carry out control

and by the way, you can train there in this way
memory structure
can be built in the structure of one's own Perception
many objects
and do the next task

if you build a lot of objects
and then enter it into your image
this is how things are planned there, for example, for future processes

Let's say a person decided to buy a house
or is there some option to be somewhere or visit something

and then he well as if mentally imagining
this structure
and then it also means that this will happen yes
some dream came true
a person only needs to consider
that it manifests itself there

then the dream begins to quickly come true

i.e. here is the presence in a person's dream
him himself
or there is another person
this is the structure of the dream realization

i.e. we are in the space of action
we introduce the physical body of a person
his personality is there
and we get the implementation
because initially
God gave everyone realization
to a person

therefore it means the presence of a person
in any space yes
and at any time
creates exactly the structure of the space itself
and the structure of the implementation of this space
in relation to a person to the external environment
as a system of information transmission
from a person

and in connection with this we see here
that the management is built in this way

shows that through any thing , yes
which surrounds a person in space
management of a specific person is carried out

i.e. in any thing it is possible to reveal
line of action of a specific person

Well For example there we will take ten billion people yes Means
well, also in the future
and through any structure
ten billion signals pass through
continuous transit time yes

it turns out that such information
as if well have
as a structure for supplying information
there is information being conducted
must have
special structure of space configuration
where each element of your thinking means exactly
is absorbed by a local element of space

and at the same time it happens
well, in fact, it's like an expansion of the action of space
into Infinity

i.e. you are actually building space
with your Thinking
and you will pay attention
which is like the next level of Thinking
can lead to all the time
either to a person
either to space

and why do I highlight it so much
the thing is that if we consider just a person
or the image of a specific person there
then we are dealing
with an Infinite value in general
with Eternal level
which is implemented as an interaction layer
as if with an external Infinite form and with Eternity

and it turns out that when we see a person like this
then we see that he is, generally speaking, Eternal from the very beginning

around him is Eternal space
which doesn't have any kind of outlines , yes
i.e. there is no such thing as there are houses of some external systems
but there are always people there who are needed

i.e. it means the management is like this
that people are as if on their own
in absolute space
and we must build around them
all for example there is the space that we perceive

so it turns out that it's like this
if so, well how the absolute model will be realized
then in the place where, for example , the Earth is
or in some similar area
you can make the next level

consider only the situation of people
and you can see that it is like that
Well, it 's such a twisted system.
exactly spiral-shaped like in DNA
and we get an exit almost to ourselves
through the structure of cognition of the Macroimage

i.e. if we consider only people
we get an outlet to ourselves

but having learned precisely the microstructure
through the Macro level

and in the same way it is possible similarly
For example treat diseases there
Well as if expressing the Macroobject through the microsystem

and it turns out that based on this
we have quite an interesting one in general
control path
quite effective
in that we build every system of space
practically manageable
from the current time
there by your own Consciousness
so that you don't have to renew there
optical element of Consciousness
to that area
you just need to work out the space here

and here are the functions of space
which are far away even in Infinity
they are almost the same
for the same systems

i.e. if there is , let's say, one element of a specific area
Well, for example, a billion years pass there
this element is still preserved
in the same place ^{yes}
provided that there were no cataclysms of any kind

it turns out that we can say that
Well I hope there won't be any cataclysms on our part
if we do management
and we contribute to the fact that there in the Infinite Future
this element was preserved

but from the point of view of my Teaching
we have to do management
precisely for the preservation of any creative object ^{yes}
any object in principle that does not cause harm ^{there}

and when we talk about those
who could be causing harm there?
then they just need to be taught
and in principle, all the same, with the preservation of their primary form

so it turns out that based on this
here is a transfer of information ^{as it were}

knowledge of your Soul
To God
through actions
through space
this is a form of ^{human} self-expression
and a person in principle in this form
contains the basic structure
of all possible events of their ^{own}
of his life of his actions

and it turns out that when we
^{for example,} we begin to analyze further
how to use it practically
this is specifically for myself ^{yes}
then we see
^{well there is a} very specific level of path
what when you consider

that you, for example, come to some place there
and you need to make specific management
then look at the space around you

i.e. like where you are there in the future yes
what could be theoretically or really there
is currently at this moment

and look at the interaction with space
for the transfer of information
from you
To God

For example there about Eternal development
how do you do it at the moment

and here is where there is a difference
when you do exactly management according to Eternal development
goes at almost infinite speed
transfer of information

if that's not how the question is put
there are speed impulses, they are local
and very long ones there, etc.

and it turns out that we can do it
there to develop some kind of Law of development of space
in the future
that space develops in relation to man
giving God actual knowledge at any time
human action

this is what is meant here
there is no direct transmission option there
and space is not a factor there
just the carrier of this information

but we actually have a management level
where in fact at Infinite distance
we guarantee then
what what we perceive means
Well there figuratively and in the form of Thinking
will have a physical place in the future

This is generally an important level of management
because if you consider

what in the Infinite future
we do comparative management of this type
that space exists
people exist therefore

then it turns out that we achieve
situation management
through what is in the future
space well as if it is guaranteed to exist

and when we start to consider
as if from one level to another
how the spatial factor develops
then here you can see what we can see
some law of space distribution
in terms of well or something of personal perception

if here is a very distant future
then the space acquires a more discrete property
the approximate future is like closer to the plane
and some optimal level of the future
this is a spheroidal system

and that's when we are in the construction of space
there we use for example there are these ones
or there in the future
manifested systems
control over the construction of Reality

then we see that in essence
here is to build reality from the beginning yes
as God does
He still builds Reality at the same time
there with human action

you can do it using the same principle
that around a person, as if to rebuild this space
and sync it
in this space
already as if by external control
i.e. to go through the structure of this person's Thinking

and then it turns out that it starts working
quite freely adaptive
as if to the system of external Reality

because that means we showed him
a certain level of work
where can he
and build space
and take care of your health there at the same time
and at the same time perceive the work of God yes

and when we start to assume here it means
Well, to make this type of control
what if we consider for example the Infinite Future
then there is an Infinite number of actually elements of Reality
then the space here acquires a viewing option
other properties
it becomes just a reflection
there is an infinite number of events

and now if we consider the question
from the point of view of how God built the World
so that if there is already a first event in the World
well, some house there for example, yes
or is there a brick?
or some kind of fence

and see what all future events are
this is well as if the growth of these events of the current time

Well For example there a man grows
and we can choose
a similar form of development of the event line
any element of Reality

then in Infinite distance
we'll see well for example, let 's say, well, it is being implemented
this particular object of Reality
in your Perception

and at the same time we can trace it quite clearly
What
how is it built according to the level of similarity
this is how a person develops
how do other elements of Reality develop in general

i.e. it is possible to determine the future
virtually any physical type of construction

if we start building this future as if
it's not easy to diagnose there
Well, it's possible through diagnostics

but when we do it through construction
then we already know one hundred percent
where this element will be located

and from the point of view
it is there that global security
civilizations of the planet as a whole in general the World
we see that it exists
certain nodal connections
between the element of space
element of human action i.e. Thinking
and the physical body

here in the work through the construction of the future space
here we need to take into account
what is human thinking
its location
and the physical body
are united into one structure in this case

because projective systems
going well there on the spectrum of human Consciousness
displayed at one point
when you are all outer space
build yourself in management
this is still the original level of a person

since you perceived in action primarily
still a human being
it turns out that we are dealing with a situation
when space itself
maybe already around the person
as if it were unfolding
well, at the level of some sort of automated connections

and if we consider the process
that God created man

gave the opportunity
there is biological reproduction of humanity
then a similar question can be considered here

what does a person mean interacting with space

may influence in a certain way
on the structure of space development
by analogy

Well, if you look at humanity there
for a person it is the birth of a child
then let's say space
it's basically like an expansion of space
in the field of activity of this person
this is well as if his creativity initiative as if
another spectrum is chosen, not physical, yes
but more creative
or there is some concept of "luck" there, etc.
some such means sometimes well as if unstable systems

and it turns out that here by analogy with this
there is still this level, then
well, actually, the translation of information
to the primary area
through the development of space
where can you see it in general
almost the primary level of this space
Well how would a person perceive it, for example?
first time at the moment next

for example, a person wanted to look at that
how was the world originally created there
here is a space that he will see for the first time
and in this view and on this process

so this is the level of space
First of all, he will see himself

i.e. we see that in the structure of the developing space
there is, after all, an image of a person
i.e. he basically does it himself

if we consider that it exists
well, in the same size, etc.
then what function does it carry?
external object of space and Reality
which seemed to remain in the past tense

so here is the function
this is the transfer of information about all past events

and then the construction of the future element begins

therefore in construction
future events or future space
there is this very level
when all past information matters
in order to get
just the right management
space of the future

i.e. correct management of topics
that in the future events are realized

and if you pay attention you can know
purely such technological attention
on this process
here you can know that when a person thinks about something
what should happen to him in the future
or on this day
then he can think of some place
and he himself is in another place

and here's to connect
this is the place where he is in physical Reality
with what must come to pass
or maybe some action has already taken place there
and he should know about this action yes

then it turns out
here you can synchronize the control like this
so that it always forms around a person
it is precisely the positive space of information, so to speak
means that it would always give control
external environment of such a positive nature
and any systems occurring in space
would be standardized for humans

if we speak in terms of time
then this is already a process of a different type in this case
but in principle it is possible to do a similar thing
and over time
there will simply be a different conversion system

time goes by more
to a person
unscrews the situation
and in this case the space is from the person

and it turns out that based on this context
if time is more like external control
a person adapts to it in order to get something done, yes

that space
it is still a more balanced system
in management
that's why I talk more about space here

and when we consider
it means the supporting platform as if to this level of space

here is the space itself
and where is the carrier level, so to speak?
which holds this platform

then we see that at this level
there is also a human level
but already the level of human Thinking

i.e. in the future
as if in a pre-spatial area
there is a level of human thinking
and in the spatial domain
this is the level of reflection of the human physical body

and it turns out the same way as God does
He distributes Thinking
depending on well as if control
and Thinking is space

i.e. the docking of Thinking with God
it's just happening very tightly
at very high speed
and for Him to provide for this means to create an element
any element of Reality
He creates any system in real time, including

then for Him here is the future process
it is basically the same as the process of the past
i.e. a symmetrical process
as if multiplied by
there is the line of a person's destiny

i.e. in fact we can determine
structure

further structure of human development
if we consider this process of symmetry
Well there it's like every other palm

draw a line on the hand there
and compare two adjacent areas

i.e. here it turns out
which we can quite see
this is a kind of regularity in management
what does it mean if we can separate
two adjacent plots
due to intuitive external control
and target management

then in principle we can get
in fact the level is next

since we mentally drew such a line
then we worked somewhere in some space
this is action
and got a structure there
For example there are past and future events

but when we from time to time
as if so we take away control, i.e. we abstract ourselves
we believe that time is not used

then in its pure form this is the space of the future
in fact, this is the level that
Well, it allows it, in general well see clearly
that as soon as we fix
space of the future
as a system that has the qualities of implementation
your desires your actions
then these desires happen

i.e. in fact we must inform
space of the future
the fact that all the elements of this space work towards that
so that you can realize your desire and your action there

it turns out that based on this if we [...]
Well let's consider this option
when there is an action for example there are animals there
even domestic cats and dogs
who live in the house

and we'll see
How do they plan the interaction system at all?
with the space of the future yes

then you can see that there is a dog running and it sees, for example
some kind of growing Reality ahead, i.e.
and can control the la there for a few seconds
control
at least by physical sight

but he has this level of control
there is another level that is more external
there are also the tasks of this animal, dogs, etc.

and that's when we start to see
how does a person react in this case
on space

then we see that a person is in front of any object
there which exists in the control space
alive yes
he actually seems to pull space towards himself

i.e. he is a human to this animal
there the space is failing
which he seems to create himself
and draws an analogy with what God does

i.e. he can learn more quickly
how to activate or function
space towards solving your problems
when looking at some other object
well, like some kind of animal

and from here it is clear
that's why you need to take care of the animals there yes
because that way we get
Manage your tasks
here you can see from this control position

if, for example, we want to make control
which well for example stable yes
it has been differentiated for quite a long time, for example
and you want to make this control like this

what well in the future so that it does n't affect you
i.e. it is a long process that needs to be leveled out

then in the spatial control system
can be considered
it is precisely the level of hard space
where is the control level yes

i.e. you know the building you are in
and you just need to do everything there Well let's assume to protect
from some energy-informational action
or there from some systems of a personal nature, yes
some person

then you see that here you can
in the structure of space construction
build as if just from scratch
some spatial line
put on an existing object
Well how to mentally take a copy yes
and see that the spread
here is some information
this is interaction

the system itself
and in fact, as if copies or reflections of this system
in the space of action

if we consider the likeness of a human being
Well, on a physical level, that's it.
how is god made

then here you can see that there is a spread
well, not in the form of a copy there, but of God, for example
and here is where the action is in principle
at a level greater, as it were, of internal self-awareness
self-perception of space

i.e. when we talk about the space of the future
then we see that this space is like this
that there is a solution there, generally speaking, to all existing problems
we need to be able to select these tasks from there

i.e. if we want
solve problems that are related to the past

we must find it as if from the right position
this system yes in the space of the future
and get into the past
to sort of remove the signal

Well that's how it works there let's assume the chain means
let's say 12 volts we can imagine the current
here is the "crown" battery and we have closed the circuit

and we need to get such an action
so that the signal would be somewhere well let's say it didn't disappear, didn't go
to the side
and the system always functioned

it turns out that we need to consider here
why are we doing this
well whatever let's assume we remove the external
let's assume there is some kind of impact to make management

and basically when you start thinking about it
how to implement for example control
processes of the future tense
then you see in some space
which is not like a space of the past
not the space of the future

and here is a certain control space
you see how you need to act in this situation

and then you decide
what is in the management itself
there exists, so to speak, a third space
which generally refers to action
within for example well, some kind of your task and management

and when you start to see this task
how to visualize
then you understand that this is it
some kind of external space
this is, well, closer to the space of Thinking, so to speak, yes, yours
but in fact it is still a physical space
which carries out a kind of transition
between the mental level
Well, this is purely schematic, in this case I am showing yes
what we perceive on a physical level

and that's when we move to the physical level

and in fact we ^{must}
this level is so consider
that at the physical level to build such control
which would give ^{us} the realization of our tasks

then we can in the control space
build

Well, basically, let's say any constructions
but it is precisely the removal ^{of a kind of signal} ^{yes}
which you don't need there in management
modification of this signal
to Norma
often this process is quite deep

and we need to understand
primary roots of the state ^{of the system}

why does this happen in the control space
what ^{does it mean} we just have to insert
there is a process of managing the space of the future
as we begin to solve the problem, well, that's ^{it} ^{as if current}
at some external level of control

and that's when we start thinking
where does this level of control come from
then it is clear that since we have already secured
some kind of system of space around you
in management and work through it
then external control is also a level
which allows ^{well} how should I proceed?

therefore it can be calculated very simply through it
who carries out ^{well} ^{as if} some kind of influence ^{let's say yes}
who is this influence

Well For example there it is directed somewhere
and why is this necessary in principle?
This is a powerful diagnostic system

i.e. why do other people need it
i.e. this is a diagnostic of the event
if we want to make a diagnosis
there is some kind of social event
it's enough for us to just
take ^{for example} there are two similar buildings standing next to each other
and mentally imagine the event between the buildings
or physically go there

and it turns out we see
having secured the buildings in advance
so we see that in general the control space is like this
what depends on our will
how are we going to build
Well as if the whole system of further events

and we clearly understand there
that we can't be there Well, let's take it out
from the level of such controlled management
i.e. how to lead astray
except for cases, let's say, when we do such management
that we take on the task
exactly find the source yes
and be able to construct your events in space
so that well Actually, there was no such process
that someone is bothering you

why do i always watch this lecture
work through the space of the future
it is the structure that is possible
well some elements of resistance

because that means here is the object of space itself
when you develop management
it could be either resistance
either help yes

and in management through the structure of space
still, we still need to consider the process
when we generally consider
external object as an object that
in principle, it kind of formally exists
in the form of resistance or, on the contrary, help

but it exists among other things
and with the function of possible resistance
if we haven't recognized it yet, yes

it turns out that based on this
just like God does
It means he lays down the structure.
objectification of a certain process
to the very last control element there
and later often means well it is born

management as such

i.e. it turns out that considering
space of the future as a system
or resistance
or there, on the contrary, there is open space
we see that in principle here if we consider
let's assume the process is ongoing
Well as if from one level of your Consciousness
For example there from the level of action
let's assume there with the heart Soul yes
it is the information of the heart that can be manifested
there are Souls
The spirit of man

and this action is such that you mean Well, you understand clearly
that you will always get around
the development structure of the Reality of an unfavorable type, so to speak
in the future
through the structure of his personal control there
and its own kind of space of Perception

then here is the construction in its pure form
future space
where, well, actually, for example there at the moment so to speak
there are not a certain number of people there, then
Well like such a quantity that you could say
with an instant impulse yes give a solution to all questions

then here it turns out
the space itself is very dynamic
if you look into the future
then the space is quite mobile
here in the management structure

and why did I say that it is necessary to look like this
so that they could be given
For example there is salvation for a large number of people

because the more people there are
for example, yes, in the future you perceive
by the way, you can help faster

because the more you perceive
in his image
people

the more you reflect their optical interactions
i.e. you are actually using
their own experience for self-help ^{yes}
i.e. you provide education
this group of people for mutual assistance

because after all, having perceived
some element in your Consciousness
you still begin to influence the external structure of the World
and due to what you see
that people ^{for example} certain
interact in one way or another
without even knowing each other
at the level of Thinking
this action is transmitted anyway
to all

and it turns out that
in the space of managing future events ^{there}
there is a level that characterizes that
that the presence of the control place is precisely ^{there}
i.e. spatial place
for every person
This is, ^{in general}, a fundamental level of management
related to the fact that physical space

actually fixed ^{well as if} for a person ^{yes}
at the information level ^{it means}
is projected onto a person
the whole system of the whole space

if we start to build an event from this point of view
^{Well as if} taking a person beyond the control spectrum
then it turns out that the system will work under load
and may not implement certain actions

i.e. we must bring a person out like this
beyond the image
there if it's a house then it's a house
we can ^{kind of} see a person nearby
but we should not consider it here
what is he ^{like for example} there is construction there ^{yes}
if we need final control

and it turns out that based on this
we see
very simple control element ^{in general}

that the more we perceive people
the more precisely we make the management

in principle God does the same
He just went into a single impulse
first distributes control
then people start to increase and populate regions there
and he actually as if I made one impulse
and further tracks in His Perception
namely a large number of people
which transforms the system

i.e. here, for example, is one of the methods of treating diseases
it is to consider a person
among a large number of people
and then we can diagnose
how to help him
to this person
and that's basically it
and this will be a control diagnostic

in principle, it is important to identify here
in this control system
next status
that's why some events yes
take quite a long time to implement
around a person

and in principle here if we look there
the entire prehistory of the series of events
then we will see very clearly
that at some point or another
when was it manifested
spatial regulation system
i.e. you were in some place
and looked at some phenomenon
i.e. perceived some event

then in another place we can see
that this is basically a kind of stretching of control
to the next action level

and he is really a person after all
Well, it works constantly at the primary level

i.e. why should everyone be there

It is desirable to engage in the technology of my Teaching
according to Macrosalvation

because that's where it arises
this is proof that in general it is possible
firstly, quickly teach those who already know as if located
maybe he doesn't even practice it
disposed to management

and on the other hand we see
what is here to understand in detail, for example
the meaning of management in this system
and try this system well how to calculate deeply
be able to master it completely
from the point of view of maximum implementation there

we can see here
that this is the construction of the space of the future
this is basically the situation
that we are building without actually relying on
to some current platform

and therefore this is the level of information transfer
as ideas for constructing space
for a person
To God for example
this is the level of construction as if in absolute space

i.e. you build management
often not tied to any areas in this case
already prepared in advance yes

and it turns out that based on this
we see in general the following status
that in order to build management
in relation to space
we need to do it this way
management status
so that a person's personality
has always been separated from space

i.e. although we can consider
that the person is there in the room or standing somewhere
but we must clearly draw an internal line
that it is as if independent of this space

and that's when we start to draw this line

and see
that the line itself starts working
like well some marker yes

which means it makes a division
we are coming closer
to the essence of human creation
what is the next level there
behind there the Primary Action of God
when He created man for example

and it turns out that this is the level of separation
this is the complete revelation of a person
in any space and time actually

and that's when we start doing it this way
what's in that space
where we are directly involved in management
this section is objectified for example by you
and you can clearly perceive this section there

here is the Perception of the section, this is already the Norm of the event
this is how you see this section more accurately
the more accurate you have
when you look at your image
in this process
the events you need will be formed

and the point of this is that
that in the Image and Likeness of God
how a person is made
it should always be separated from the event structure
well, which, for example, other people can do there, etc. yes

i.e. this is the section level
this is the level of compliance with that
as God does
It is also always separated from external matter.

and then the question arises from the point of view of that
and that means Well then who acts?
for example, from the point of view of for example Well as if an external observer yes
in working with space

how does God produce at all
this is the department

He himself is the Creator of space

and that's when we begin to understand
this is the property of the space of the future actually
then we see it really is real
A person living forever in the future
because this is the level of separation
it is just that
Eternal life of man

i.e. God is coming
Human
which is also already Eternal, yes
and then it is already clear that everything that follows
this is already just an external space

i.e. of the same type
the most approximate systems
closest to God
this is a person who lives forever
and it goes on and on
space of the outer world

therefore, based on the structure already
already current space yes
as if it were the closest to the future
we can say what exactly originally

the very fact of the existence of space
says that man is Eternal
in this control structure

and from here by the way you can work out
a huge number of positive techniques
for example, consider space like this
so that a person perceives
those parts of space when it is being healed

i.e. just pay attention to it
when a person walks down the street there
or internally draws attention
for future events

and he builds it correctly
namely the structure of future events

This is where I end today's seminar.

Thank you very much for your attention
