

GRIGORY GRABOVOY
The Teaching about God
Creating a management goal
21.12.2004

Good evening
the topic of my seminar today
this is my Teaching about God
Creating a management goal

In this topic we are considering
the very principle of creating a management goal
provided that the goal, generally speaking, when it is formed
many additional conditions arise around
that need to be taken into account

and generally speaking, the methodology of goal formation
also provided
that in principle the goal is usually known to a person
but it needs to be defined correctly
it is necessary to do it in such a way that the goal is stable
precisely in the control environment

and from a technological point of view
for example, when in the beginning I still
showed during initial control
how to manage yes as a matter of fact
considering that the goal is known in advance

in this technology
I, taking into account the previous level of management
I show in general how the goal is primary
it may even be formed on many
methods, systems and principles
still manage to create in conditions
as if earlier information

i.e. there is a goal of instant reaction
for example, you need to react well for example, so that there is no yes
possible some problem
which can develop quickly is a quick reaction
i.e. the goal there is like a reaction system
management objective

and yet in all cases

you can create a control goal

for example through analysis yes

that's why deterministic analysis is needed there

or is it just an analysis of some situation?

because, after all, in essence

This technology also applies to that

what from the point of view of past events

it is still possible to form

as if the primary goal of the action yes

in relation to events i.e. accounting of events

and already the next action

technologically as a rule

in practice it happens like this

what a person when sets or achieves the next goal

it seems to take into account a certain level

everything that has already been realized

i.e. actually sees his accumulated experience

during implementation

well, to one degree or another

basically a target experience

which he needs at this moment

therefore, the management goal is revealed

the level of a person's own Soul

i.e. the goal as a rule and generally speaking initially

it is determined by the action of the Soul

and generally speaking there is a more stable one here

in principle, even the status is static

as Soul Perception

i.e. a person is faced

with the system of Perception of one's own Soul

therefore, identifying the goal

This is a fairly simple task

because there are many different components of the situation

but it is precisely the creation of the management goal as such

for example, we decided to abstractly take and create a goal for ourselves

i.e. without knowing it

it is clear that she is creative

but we decided to create it and have some kind of management goal

then it turns out that here

generally speaking, a level arises

which necessarily considers

the dynamics of God's development

i.e. in this case the Action of God
and the dynamics of development in relation to you
is immediately visible as that

how God is manifested in the physical world
that means exactly at all levels
in relation to the target

i.e. we see God's work first
we try to correlate it means
or get information about actions
and then we form the goal that we need
which in principle is probably already known to us

so it turns out that the formation of the goal
it is necessary to take into account the factor of the past
where the experience has been accumulated will act yes
on your target

how to do it at all
because the goal of management can be
naturally not only the goal
but also the technology of execution
realization of the goal

then we look at
how the Soul perceives Reality
and why is the goal formed this way
here is the most important key point in general
in organizational terms, it is the organization's goals

why for the Soul
from the point of view of the further development of the Soul
the goal is formed exactly like this

for example, in Eternal Development
It is clear that a person must be healthy
Well, at the very least he should be able to improve his health
to build the most favorable events possible
but in essence, well, really favorable

and it turns out that here we see the status
that a person actually
when forming a seemingly single goal
generally even everyday

a person goes to a store, for example
he is often forced to solve problems of a fundamental nature
as soon as it hits a certain level
target structures precisely for the long-term plan yes
or content

i.e. a person is often faced with a decision
its strategic tasks

and it turns out that his Soul gives a projection
where in combination with the Souls of other people
or with the will of other people
with the actions of other people
we see that the control structure
begins to shrink into perceived Reality

i.e., by and large, for a person
The reality that appears before him
this is also his original goal of management
at the level where God has defined the tasks
generally speaking, to everyone at once

there is important context here for exactly that
to learn how to create a management goal
what God shows man here
its practically a connection
with the whole world
and its specific task

i.e. a person in principle always encounters it personally
with its task in essence

and it turns out that it is the same as for God
why God can control all elements of Reality
simultaneously
because for Him
each task is personal and private
and practically a fundamental task as well
a task where there are connections
on the same level as all others

and it turns out that based on this
we can when creating a management goal
to introduce such a creative governing meaning
i.e. change control
at the level of action
at the level of Perception

i.e. in this mode of dynamics
certain interactions
to be able means when we develop the goal of management
this means we need to take into account almost simultaneously
what is happening around the target
and the goal is to develop at the same time
towards implementation
be able to take into account external factors

i.e. it is a dynamic control system
which actually has
well to a certain extent as if sometimes loaded

because sometimes the design requires it
certain correction
external management and yours specifically
or there is a connection of collective management

and then it turns out that in general
management is the solution of a person's personal problems
in the conditions of his, as it were, expressed will

i.e. it turns out in the creation of a management goal
this is a primary-volitional construction
which defines a kind of dynamic system
goal development system

and it turns out that when we, for example,
Well, we want to do it long-term.
some kind of predictive control there
or some kind of predictive formation
taking into account external management

then here is the current state yes the current status
where do you consider the management problem
such as the following primary
or there after those which have already happened yes
post next etc.
i.e. Infinite level

that is the technology of Eternal Life
here is Eternal development
here it is manifested
as a system of a certain specific and often

information
which develops before you
in the form of an external environment

i.e. here is all the Eternal information
can be identified as an environmental system
This is an important level of management
because with the external environment, as it were
with external information
you can always do a control action
which always happens
at the level of control on your part

and therefore when we create exactly
management objective

all information is external
precisely from the point of view of Eternal development
some kind of Eternal Road yes
which is specifically aimed at you

this information is being folded
into the structure well as if the target cores
i.e. it is precisely the creation that occurs
at the level of dynamics
Eternal interaction and, as it were, an expressed goal

i.e. a goal where there are some final processes
interact with the Eternal Environment
and it turns out that the creation of a goal
these are clearly declared values , you know
what do you want
and at the same time the whole huge mass
certain information
it is very or clearly located around your target
or she constantly interacts

or we can consider the statics of the structure
what is the dynamics when approaching
i.e. when approaching, static begins to appear
as control dynamics and
or simply in a dynamic system
in real time
in dialog mode or in mono-level mode
where is your control

interacts with many dialog systems, including
or conduct many dialogues with many systems

you start the personal meaning of management
invest in Infinite development
thereby you also pass on the experience of your overall task, yes

i.e. if people work for management purposes
then it turns out very well
pass on more information to those people
which realize the goal

Well For example yes, including yours
if it is some kind of collective goal

and try to conduct education taking into account that
what do you know what will happen in front of these people
in future events

i.e. in fact, it is not even necessarily only in front of people
perhaps these are some information objects, etc.

and thus we can very well put
for example the following management objective

i.e. we need it to be in the next 2005
there were favorable events in the world
so we must have this management goal
in fact, for example, to create and influence
on those designs
which means well maybe that means they are acting let's say so
not as effective now
or do they need to be created at all?
so that events turn out favorably

for this, in this control context
we have to very quickly often enough quickly
almost instantly first do
from the moment of formulating the goal
it means personal control, so to speak Yes

in this case, control occurs
keep in mind not only from you
but from your physical body

you definitely have to watch it
this super speed
how does god work

i.e. here we need to synchronize very quickly
i.e. practically no difference in the level of action
from the level of impulse of God's Action

i.e. instant control right away
for a positive good development of events

i.e. we don't go into detail at first
in other words, we are trying to make it as if
pre-control action

i.e. in creating a management goal
as soon as the goal is still only as if Well, it's starting to come true
i.e. before I said it verbally
I still brought out the control level first, yes
then I brought the word exactly

and it turns out that when we start
fold your personal management for example with that
which is already beginning to happen in verbal expression
then here we are
Well for example, if we consider January 2005
and consider the events in Spain for example there 20 25 january
then here we see the following connection

i.e. there are some events of the past yes
past some aspects of management
and if these events
well they have some level of previous actions
then there are two levels of reaction
i.e. either use them yes
or not react at all
so that there would be some preliminary control
and make a new management structure

in this regard, it is necessary, for example, to detail the system
i.e. I speak from the point of view of blog-pleasing events
all over the world
Macrosalvation
here we find an element of Spain there

and at the same time we, for example, talk about some numbers, yes
For example there on January 20, 2005

Can you elaborate on the situation?

but as soon as we introduce a management level
naturally, that's how you did it
first level of management
and God did the same with you, so that he might make management

it turns out that events are developing in the direction of optimization

i.e. we can consider the status of the assumption well, some
let's assume there is transport yes well, it's a normalized line
there let's assume the ecological environment
and we begin to normalize the line
specifically in the field of ecology
moving for example in the first days of January
but it is possible to standardize from Russia

i.e. take for example there is an oxygen molecule
increase volume
i.e. to create in the management structure
increase in simple oxygen

and send control, for example, through the first numbers
there in the same Spain and already on the 20th

i.e. we start working with the date
as in general with a fixed date
to be able to make this date in general Well, if it's unfavorable, for example Yes
how can it be restructured and made so
so that there is no unfavorable effect on this date

it turns out that this is the simplest option
as I have just shown
work first with the primary environment
i.e. where we do not reveal the structure well For example there is a digital one

i.e. oxygen air we can basically say
that at some distance from oneself
we see oxygen yes but it is everywhere
i.e. no matter how the number is formulated , it is immediately yes

we can say that all the oxygen is like this
but we don't need that now
so then it turns out
that we find control

which kind of starts the date well how to balance yes

Next we transfer control to Russia
because it is

Well, let's say it 's far enough and the control is stable
in my opinion, the center of Russia is more favorable
from the point of view of the political environment as well
we are sort of withdrawing control from the territory of Spain yes

then we start looking at neighboring countries
there France UK

what kind of relationship for example after 2005

Great Britain and Russia

they are naturally favorable

but for example in 2007 it is necessary to add there
political level on a larger scale

in terms of interaction between Great Britain and Russia

i.e. some elements begin to develop

which basically take away control

to a more distant status

i.e. the political system intersects

For example there with environmental events, etc.

It is clear to everyone that the situation is quite acute now
so peculiar, not even spicy

but it's just that this topic is quite problematic
like terrorism

therefore it turns out that in the collective faction of Consciousness

naturally this combination exists somewhere yes

from the point of view of possible terrorist influence there

and for example if we consider

let's say after finishing the work, yes

in the management target in the element for example January

all over the world but through Spain

i.e. we generally don't specifically detail the management

and we don't record events

i.e. we just work around the date in this case

we can see what possible means

for example, a terrorist attack in early February in Israel

do this system

already now yes

knowing previous specific experience

well, that is, in creating a management goal it is important to have
after all, the immediate previous experience is important
while the knowledge accumulated there is accumulated experience
it may not be used at all

i.e. external control

Well, it is still used as the power of the Spirit
as an element of knowledge
but it may not be used technologically

why am I studying in this particular case

Well Well as if we were to consider the level of education
then there is well as if the level of universal education yes
every person learns to do something
for example in management

and when there is a kind of concept

Well there if someone teaches yes
then the person still learns on his own

i.e. and if we move on to constructing a date

let's say I need to teach a person to do this
so that there is no problem yes
then I say that I am learning

but if we add there with a soft sign

then it turns out that
well, that is, we add a kind of sound form , yes

I am gaining knowledge

i.e. I am studying , but in principle I can, for example there
just perceive information
well, some kind of accumulation
i.e. any accumulation of knowledge
after all, it's training

i.e. in this case we can say that the person

there he studies in the current time constantly
it is precisely learning some processes there as if

and it turns out that way

what is the concept of "a person learns" yes
that is, he can change the control apparatus all the time
he can, for example , through self-study there
or self-perception
or there for example, access to certain control systems

due to the activation of Consciousness
certain factions of Consciousness
gain knowledge i.e. learn to do something new

therefore, in creating a management goal
it is always necessary to leave
a mechanism to learn to do something completely new
i.e. to perceive something completely new

because for example technological systems yes
which can be used to be well let's assume in terrorist attacks
in this case
they may be completely new, i.e.

and therefore the first task is to learn how to do it
so that such technologies do not arise before that time
and in a completely optimal way
that people who are interested
they will simply not be interested
either economically or organizationally
i.e. they have a happier life and they understand it
because they don't do it yeah

next we
We just give them such life events
further, it seems that the formation of new systems does not occur there
but then I should be able to get training
i.e. how to learn
at that time, i.e. to that control point
I have to kind of teach myself
here is based on the current time
what should i do then

For example there at the end of January 2005
then it turns out
well basically or teach everyone

in this case I speak for myself
meaning in general how a person might speak about himself

and then it turns out that a person needs
learn specific constructions accurately
to cope with the management goal

and now we will look at the end of February 2005
countries such as France Austria
and through regulation again coming from Russia

precisely in a political way
we start profiling
Well, again the same old, albeit local, terrorist attacks
which in this case
due to the fact that there is time now
we can learn, for example, and we will definitely learn
implement new technologies in any case
which are exactly capable of, for example yes adjust
Well, at least minimize it
but ideally we need to prevent processes
because any minimization
this is not a solution to the problem in any case
no solution at all

i.e. if, let's assume, a terrorist attack does occur
or some kind of problematic action in general
in principle not only for civilization yes
for a person personally
in any case, it is considered that the control is not implemented

and therefore in the creation of the management goal
if we are doing some kind of management
then we must do it anyway
so that the goal naturally has the possibility of implementation

for example, God has a task
so how before the start
Well for example, we will move in time, if you can say so there
to the task of creating man

although in essence man was created
at the same time almost with God
i.e. during the Self-creation of God
all external Reality and internal

and it turns out that
nevertheless, we will take it and sort of stretch it out
abstract logical model
so God needs to create man

then it turns out that He doesn't care
should make the action almost instantaneous
and as if prolonged
i.e. He must keep in concentration
the fulfillment of this fact is mandatory
and so He created man

then it turns out that since He created man
He has the following task
i.e. the goal of management is the task
control as if created level

and that means we should see here, for example , in a specific plan
why did i say specifically about a person
a specific person is enough for us
in a certain place
where some problem threatens him, for example Yes
save
and in fact we are solving the issue
in relation to the entire system

and it turns out that in Austria and France
save a person
and at the same time we see that in principle we are talking about
about Western Europe for example there about Germany
that we, for example, do not touch on such topics at all now
and we work as if indirectly

however, if any specific concepts emerged
then it is necessary to make management in these concepts
so that it would be effective and would definitely take place

i.e. everyone has a personal task
with all this, a person must definitely decide
personal tasks to implement

so it turns out that it is a person
at the moment of solving personal problems
Well For example there provides security to anyone
sometimes people take care of themselves too
although those who are involved in the Salvation system
they don't take care of themselves that often
but nevertheless it makes sense to watch it periodically
to your own events

and when, for example, it turns out that we are doing management
that's the target yes let's assume by country
according to some political systems
there is a very simple, well, level
which is actually like a kind of level
Well, absolutely normal

i.e. there is a person who should live happily forever

and this person if you start moving him ^{there} yes
his image is just his information
by countries of the world
it is immediately clear where there is a difference from this Standard

i.e. for this, ^{for example} , we take a planet ^{there for example} Earth
in this case we are talking about the Earth
we have a management level
if some other planet
We are interested in it from the point of view
so that it ^{would} remain in its place, ^{yes}
and the comet didn't hit it
and the fragments did not fly towards the Earth, ^{for example}

but nothing else
at least for this management purpose
well , at least we don't set the task so ^{clearly}
because it may be of interest in the grand scheme of things
^{there} is development of life but
please let any form of life develop there
creative naturally

it just works out here
that we take into account all external space
its local goal
the planet and the outside world still exist, etc.

i.e. interaction still occurs
why did God create
it is precisely the internal state of the ^{Soul}
i.e. the inner level of the human Soul
because inside a person reflects
precisely the processes of all external Reality

i.e. he doesn't have to master it for a long time ^{there}
outer space
he can through the structure ^{for example there} clairvoyance of the manager
see processes and influence them positively

i.e. you have a mechanism
so in principle we work again according to the goal

the limitation is obtained by the goal, i.e. localization ^{yes}
giving form to some control
so this is, it turns out, taking into account external factors

the more accurately we take into account

let's assume an infinite number of external systems
the more accurately we will see
optical even in logical expression
form by management objective

and now, for example, having made the control
so in relation to the month of March
we need to make an urgent very quick transition
in December 2005 again

i.e. from March straight to December
and close the ring of events
actually well there is not a full ring, let's say yes
to the level of implementation of all events
at the same time at a favorable level

the human Soul has such a level
Soul in the major level
makes a capture well like a very fast level
this is the governing light of knowledge in fact
so where well what you learned is already being implemented
as an instant action level

i.e. you have prepared yourself
even often the thought that you need to prepare yourself is enough
to [...] actions
you are ready now

and now you instantly close the control
and you begin to correct this circle of certain events
or is there a spiral of events
into a certain form of the Norm

i.e. in March you start to pull out the Norma
for example there for the whole civilization

why do I suppose set the task of management for example like this
that in some cases I show more
ideological aspect yes
and somewhere specific, well there are countries or events

because from my point of view
I am considering that at this level of management
when we work together now

I think it's better to say it this way
i.e. it will be achieved more effectively here

the goal of Macrosalvation
and the participants achieve precisely management according to personal goals

i.e. preferably in today's seminar
necessarily personal goals organize create
and make them happen
next year or ^{there} in the Infinite Future

i.e. it turns out that you need it whenever possible
identify your own tasks
and try to understand my management level
it is precisely in this applied version
when you achieve goals

i.e. try to see the goals as they develop ^{yes}
in space and time
and if these are long-term goals there are no problems
i.e., it is precisely a locally identified target
now but long term
it is quite easy to operate

this is a normal line of light
which ^{seems to be} spreading ^{for example there} in Infinity
but has application implementation systems
i.e. you know what will happen

but in principle it is even possible to eat without it
there are just control systems
who then start dating
the main thing is to know that they will be
need to be controlled in some way

i.e. right now I'm talking about exactly that
that we are identifying a system that needs to be managed
without fixing the negative status of the event
if possible

i.e. we can determine the primary signs
that ^{well} maybe it is connected with this or that element
but in principle, by and large, in the control logic
it is necessary to make the management in this way
so that even some precise information
if it is unfavorable
^{then} it should be translated
first into the phase of less defined systems

i.e. she has information about the future
very simple and quite effective
Well, in general, it's even a convenient feature
what does not necessarily mean unfavorable system
is being implemented

as a rule, she actually does this
initially it is not even necessary
if only a person noticed this area
he instantly sets up his resource
and all the resources of the individual
and by the way God then also makes more control levels
for you to gain knowledge

i.e. it can be seen as ^{yes}
how to overcome some situation

and in this regard, in order for the situation to be normalized
it turns out that you can ^{do it} right away
as if in direct contact with God
get information and balance ^{yes}
all control

the main thing is to see
it is precisely the control that comes from you all the time

that's all I do ^{there} today for example on management ^{yes}
for 2005
I still keep the concentration line all the time
i.e. I have only one task now
that's exactly what management ^{means} to the side
^{it means} precisely through Macrosalvation
favorable events all over the world

and I, for ^{example}, said this at the beginning
I may not remember, ^{yes}, i.e. not visualize it ^{there}
don't say it again

nevertheless, it is already clear to everyone that there is such a goal
and in principle this is a common goal for any person
not only there 2005
but all the Infinite Future should be normal
for any person, moreover

the position here ^{is like this}

that the goals seem to be ^{not} even one person
Well, there is a specific goal, it exists.
in some information space

and so if we, ^{for example,} then we want to understand
how is this ^{goal realized} ^{yes} For example
there in the Soul of God where it is contained

i.e. I declared the goal of management
but there is some place
so where is it located generally speaking
Well, in general, it's the ^{same} goal for everyone

it turns out that this is the place
is often mostly sometimes
that's what happens in most cases
what is
manage next event
effective management of the next event
contains the primary purpose
which we, ^{for example,} are forming today
there in december 2004 we have a management goal
and yet in March 2005 this goal is visible

i.e. it turns out the same as God does
this means that there is practically no time gap
and it turns out that it is enough to just visualize ^{yes}
absence of time interval
and consider only the space of action
i.e. the occurrence of events
then it arises
a very powerful mechanism for managing future events
where the element of time is removed
the event is built very simply

because an event outside of time is not rigidly fixed ^{yes}
in the system of collective Consciousness
or is not recorded at all

i.e. it is believed that time exists
and ^{how does} time-related management occur?

it turns out for some microseconds
you find a niche of complete control ^{over} this process
you are recording a process of some future
and you just start moving the controls there

well, like some kind of chess pieces , so to speak

in fact it may be so
through the projection of some action
For example there is a chess game
or there through some projection
you can do find management methods, etc.

i.e. in a system of such action
event management is like an external light

how will you achieve it
or universal control
or visualization of some control systems
it's basically the same thing
the main thing is to see the final actions outside of time
i.e. in a timeless aspect

and as soon as you, for example, come to this management
it is clear that in absolutely any case
under any combination of events
you are there in complete safety, healthy, etc.
and events around you are developing favorably

i.e. here
this is some kind of quintessence of management
it occurs often well as if more there
well, in a predictable long-term level, I guess
but it is really desirable to attract her here

i.e. at this time
i.e. if in March you achieve such stability
then it is enough to get light from it here
and you will see that this is the ring that you closed
from March to December 2005 from March 2005
already sort of switching to the current time

i.e. here is the full control cycle
you have it now

i.e. you are starting now in very detailed detail
review events
including events there in January 2005 for example

by the way, from this point of view we can consider it
previous events in more detail
there in other places what happened where

i.e. to make some analysis ^{there} on Macroregulation

and when you start to be already there
in the stable control phase

i.e. you keep under control, ^{for example}, an interval of one year
then it is easiest to keep the year interval under control
if you're looking 10 years ahead
for some specific events

Well, let there be a personal life ^{there}

^{there} Well, to put it simply, you are healthy

everything is going well for you

here is the light of these events

seems to come from the top level ^{yes}

for the current year

and you begin to see that the year itself

one of the concentrations i.e. it's not that difficult ^{in general}

you can get to the control

when such a ^{kind of} rigid concentration ^{or something}

see from afar

then there is an even greater concentration there

this is how God builds events, ^{for example}

It makes the next level more concentrated.

then it turns out that it is quite fast for him ^{yes}

log in for ^{more} like an early next level

for Him it's like

well morning

let's say if we consider it as an earlier state

in relation to the evening

then ^{let's say} in the morning the following event appears to God

and it turns out He is looking from here

if He changes His Perception very quickly

then He begins not just to balance current events

but also quickly connect them into a common bundle ^{yes}

in relation to neighboring events, to the following ones, etc.

and it turns out that in this problem

a light appears that hits your event

^{For example} ^{there} from 2015 or there from 2018 we'll take it a little further

then it turns out that this light just needs ^{to be} started to be knitted

i.e. connect with some lines

reverse action including

i.e. it is clear that if some previous event has been accomplished
then the event has a certain level

Well as if the consequence of the action

and if you know all the previous events of the World, yes
knit very quickly
with at least one favorable event of yours
which is certainly achievable by you there
elementary, even literally right there in a second
there is a good idea there etc.

and this will be a very powerful aspect of management
which will allow solving strategic tasks

so let's make the control yes
until March 2005, generally Infinitely
so that everything would be favorable there
due to the rapid connection of events
strategically remote there for example in the Infinite Future
and March 2003
and we'll immediately move on to April

so in March 2003
through the level as if more already the next
because the light is concentrated
it even hits downwards

you see, it turns out here
that such connections are very powerful
i.e., like a powerful light [...]

it turns out that as soon as you get there
for an earlier year there is either 2002 or 2000
at least there to the level of birth yes
it turns out that on the first of March you are just there
For example there you are born on the first of March
which immediately arose

all events need to be clarified
and through these events
make a favorable event in the Infinite development
then you will definitely get a favorable event for yourself
but definitely in March 2003, as it were
which you can highlight, for example

look at the management again through 2003
for example, in this case you are in March 2003
favorable events just well take from the past
which were favorable there
and energy as if from them to information
convert to 2005

i.e. in 2003 you can definitely get
Do you know what favorable events you have there?
and from here they took it out and received it in 2005 as if on their platform
Norm

i.e. in one word do it
in short, establish a very fast connection
between there the Endless past

and the Infinite Future

and March 2005 these are events
which must be performed necessarily favorably
they will be done like that

now manage including personal tasks
I will manage with you

Here we need to pay attention to the fact
what when i said about march 2003
when this light of events comes
for example we take 2018
and there, for example, from 2015 there is a difference of 3 years

it turns out that we have the number 3 and somehow as if
and in this case I use 2003
as a generalized platform
i.e. I derived the three from, for example there are eights there
just for the sake of it, well, I did it like this
so that the number is not visualized

here is the task in management as follows
so that the number that is possible, for example, contains in itself
some characteristics, well, let's assume some kind of negative , yes
so that this number is not formed
at the moment of fixation of the control systems

that's why i did it
that two or even in management there are three several times

showed
what is projective management
it's going through 2003, that means

and the difference before that I basically as if by chance he said
that is 2015 but let's look at 2018
added three years for some reason yes

it turns out that I would have done something external like that
as if more associative control
that it is possible as if
in reality, this precision is achieved here precisely in that
what you see in any case
that you achieve precision
when you external control system
make the most of it

I took and used this three year difference
and when working with 2005, I indicated it twice

on the positive event of March 2003

and it turns out that in principle
to get the same
i.e. you overcome the situation favorably
and in the future it will be completely different, as it were yes it develops

i.e. if there were any unfavorable situations
at an earlier time it means that
what was in an earlier time
it is possible to consider all events
that were positive for you
and on some kind of platform of positivism
well, like at some kind of basic level
bring management to positive into mandatory positive yes
For example there as of March 2005

at the same time 2003 is just like a system
Well, that's how the control is turned on, some kind of switch there
where does it mean that only the positive system is included
i.e. what you have already overcome
i.e. what you have already overcome
and what you have as a positive system
even if it's just one day

i.e. remember one simply standardized day
when you think that on this day everything is fine

or some favorable thought there Yes
finally look at this period there

and then it turns out that a person in principle
this is how God knows for sure that the future is favorable

and the fact that he is here
firstly, it means it is based on that
what if we consider that God exists
it is precisely this timeless element like the past
then the past is favorable
and on one favorable element
He makes all Reality
i.e. on the element of the primary level of creation
He made all Reality yes

it would seem like a small element of light there
and in this world is located all Reality
already next

here it turns out
stability of current control time

it needs to be big enough
Well in general, huge management resources
occur in the current time

and it turns out that when you set your tasks
and made the management proceed from themselves

you can use sound forms there
can be used
for example, a system of information vibrations
some kind of sound -vibrational forms there
color
in principle, it is possible to work with numbers

but in the forecast phase when you work with numbers
the number should only work for control
and to form positive numbers

and then it turns out that we can in principle
do it in the following simple way yes
elementary
for example, in March we will schedule the management right down to the day
for every day of March
and we will make it so that in any case

there was a positive combination of events for Russia
central region of Russia Moscow means
the prospect of development of civilization, etc.

and since civilization in any case
must develop forever
then prospects should come under management
where are the real plans the fulfilled plans

i.e. sometimes the concept of "perspective"
this is a completed action
at least you should understand
that this happened

and when you already understand
then you understand that there is well as if something good happened yes
but to understand that something good happened
allows often there or earlier experience yes
or just no experience at all, just regular information
that something good exists in this action

in principle this is enough to make the control
but you still need to visualize
at least one or two designs
what is needed for the development of civilization

well, some new technologies there
more disposed towards people, etc.

and when for example we look
that some kind of forum and meeting is taking place
according to the level of organization of energy types there
realization of existing energy levels
like there is nuclear energy for industrial purposes for example

then it is clear that it is at least desirable
fix only industrial target yes
and then nuclear energy
withdraw from circulation
give the level of influx of new systems
which ensure safety
in one word for humanity
energy, etc.

i.e. such a nodal level is quite high
i.e. well, it's quite interesting
well and quite a systemic level in March 2005

when will the issues be resolved
concerning civilization as a whole
so it is necessary to help here
from the point of view of the formation of such a form, yes
, Russia could be the initiator there

and in principle it will be Russia
but the concept, for example, "will be" yes
in this case it is based on that
what is the absolute future
in principle, there is such a level of construction
which means the future
in relation to a specific person
it happens anyway
namely a good naturally creative future

but when it comes to countries, it's even about two people
then here you still need to enter control
i.e. it will be but we need to help it yes
i.e. to make the management so that the level of Macro-creation
was formally registered there in documents, etc.
and was extended to all countries

and since I said that as soon as in March we work
we instantly move to April
then we can consider for example there is a region of Turkey
central region of Central Asia for example there is Kazakhstan

then we can consider it
already as if the following regions of Russia
but in these countries Türkiye Kazakhstan we need to do it this way
so that there are no destructive earthquakes
i.e. for this you just need to understand the nature of everything

where does control come from
example today we tied there I personally tied
what is Macro Management
this is precisely the development that is beneficial for the whole world
for April, for example, it is connected with the fact that
so that there are no earthquakes there

and because, firstly, in essence
this means you can take any element of Reality
those. any action
take any person
and that means making management in relation to it

this will be the same management related
to the fact that in the whole world everything will be favorable

i.e. in principle there is none here
some special choice option
i.e. yes, there are some future events ^{there}
but they are mostly positive in people

so, but here it turns out that it arises
the process of equality after all
When creating a management goal, it is imperative to have
equality of all systems of action

i.e. take any person there
for example , somewhere in Australia there is a child walking around right now
and you can make a control near it
that's what I'm doing right now
it is no different in terms of technological principle
what does it mean to go ^{means} or to remove the possibility in general
earthquakes there in Turkey Kazakhstan
that to work out a favorable event
near this child

and then it turns out that right now
with this knowledge
we can go ^{for example there}
to the northern territory of the Russian Federation

here it turns out that it was not there
environmental problem emissions
some problems with nuclear energy , etc.

which it is clear that they will not affect anyone ^{at all}
it's clear now
moreover, they are not even dangerous now in principle
but in five years there may be questions
It's better to start solving this now

i.e. we begin to consider
next ^{means yes} control system
the following aspects of action

and in principle these aspects they appeared after that
as I said that the management
in relation to any person
it's always equal control after all

i.e. a person always has equal rights
and it is necessary to carry out management
in relation to all people
in general, even in essence to all phenomena of Reality
but first of all to people

and it turns out that based on this
if there is, well, infringement of interests
or there are some problems with one person
in the Infinite future there
then we can visualize this signal

i.e. in fact we can see
generally speaking, a certain dialogue system
i.e. a man from the future yes
well, in this informative sense, including for example
he transmits some information
maybe he himself doesn't notice
but we see this information around him

and that's how we learn to see and have already learned yes
there is a diagnostic device
i.e. we see what can influence it

this is where we start to see
example, this is why God created
different elements of Reality yes
Well, for example, God had an opportunity there
make a monolithic world

so, but here is precisely the division
there is a level of external action
our own opinion
Well, we have to have our own opinion somewhere

to introduce into some space
i.e. well, or at least visualize

and it turns out that our opinion determines
situation in the strategic future
here I showed the output to the event from a person for example Yes
located well there at an earlier time

from the point of view of the ideology of that
that all connections in the world have
Infinite level of first connections

secondly
every element is connected to every other

each element is earlier ^{there}
always connected to the next one it turns out

and the question is, here is each next element
how it will be related to the current element

and here it turns out very simple
in general, a geometric design
which we can apply
so that, for example, back ^{there} in April 2005, ^{for example}
but having considered April 2003 2002
i.e. creating again
such a through line of favorable events
it was during these months

i.e. for example 2002 or 2000 , April
we are ^{therefore} considering some favorable events
maybe it's not necessary to remember them there
just consider the optical expression
how optics grows to a favorable level
recognition of favorable level

i.e. God in the past He is the same as now, ^{yes}
i.e. God's action in the past
it is no different from that action
which is now or in the future
by logical aspect
God is always one and His actions are one

it turns out that if there is
in connection with the Action of God
and any action happens
in connection with the Action of God
you see a favorable level

then you can just light the events
use
not exactly like ^{some} object or ^{form}
or let's assume there is no talk about what needs to be taken there
some amount of volume of this light
and move it here
but simply the knowledge that you receive
considering those events
and the opportunity to correct past events

this is what is special about this management

i.e. if well for example, there are nuclear weapons there
yes of course it is possible by political means it is effective
this is how it will be done
it will be withdrawn from circulation there

but it is possible to influence the whole Reality
having entered into an earlier structure
and just fix the structure
so that in the future there will be any elements there
that threaten a person
they were minimized
and eventually transformed there
creative system

i.e. it is still control through an earlier system

and it turns out that there is control here
well , like, like past processes
but in essence it is a very quick acquisition of knowledge and experience

after all, God gives knowledge not only of the present, yes
but also of the past
at the same time to a person

i.e. if we consider this position
how does a person perceive Reality in general
Where
where does the past even exist

then it turns out that from the point of view of memory it is understandable
but if we take for example
information space
and we will consider that God is forced to hold
as if on Himself
all space of the past future there present

then it turns out that this is a specific control space

from a management point of view
this is a real volume of information

and it turns out that based on this array
it can still be quite big
It depends on how it is, well, if you look at it that way

some like a wagon yes
if you take a lot it means
Means Well as if the preceding cars
then you can influence it by means of mass
on the current car
the one that drives for example there in that direction
which was determined in advance

it turns out that this is what
if you do a very powerful concentration
past events positive
there is still some influence
but the only thing is that the past is in a different time
yes, here we introduce the concept of "time"

how does god overcome this concept
uses the resource of the past

He just looks at everything from a fundamental point of view.
what's inside as if yes, these wagons, well, relatively speaking
what how
how are they related to each other
what is another property of these systems

and we, for example, look, well, naturally the Earth exists
i.e. the Earth as a connecting link
as a property of concentration
reaction property
the property of using some past elements

if we take ancient monuments for example
tune in to them
through the space of inner vision
why were they created by god yes
and it is clear that they were created by man
why were they created by god

then you can see the line of interaction
God-man
at the time of construction
i.e. simply
just learn how to lay bricks there anyway
from the builder who laid it then

and it turns out that here
Well, I mean geometry and so on.

how he laid
what meaning did you put into it
i.e. there is a lot to learn
if we are a certain level of Reality
let's just look at it from the other side, as it were Yes
from another position

and here it turns out that in May 2005
Russia may have a decisive position
by formation for example there is a counter-terrorism movement
in terms of the phenomenon of terrorism
it still means something Well, consider it that way
that a fundamental question is being resolved
not the way there let's assume only persecution
and the mechanism for solving the problems of these people
i.e. they are from somewhere, for some reason they behave this way

and it turns out that something must be worked out here
mechanism for resolving these issues
where there is, as it were, a fundamental level in the essence of the solution
where Russia can have a decisive position
showing precisely the task of civilization
and from the point of view of tasks
mechanisms of interconnection

from this point of view it is quite useful
meetings that can be held
and in general the design is quite objectified
already now

this is for example there are several meetings in Austria and Russia
which will also include China
and it is important that the meetings themselves
took place in a peaceful atmosphere
to prevent the possibility of terrorist attacks

because there is a fight against terrorist attacks there
in conditions when well there is some possibility that increases
it's not very practical after all
It is desirable to fight terrorist attacks in peaceful conditions
when terrorist attacks have not yet been formed
so we are doing something right yes
i.e. this is the right direction
we work in peaceful conditions, that means

and it turns out that based on this management
preferably in June 2005

there were no means of action ^{there}
^{there are} impacts on children in principle
i.e. children must be protected

For example, there is International Children's Day

i.e. we need to try to make the management
just by age categories

socially ^{means} Well, they are less protected ^{there.}
the population layers ^{there are} old people, ^{let's assume} yes, children, etc.
those who are less socially protected
we just need to make management for all of them

i.e. give them the opportunity
if a person already has a long age, ^{so to speak}
^{Well,} give them rejuvenation technology ^{there}
give him the opportunity to increase his health resource
or just get healthier

in any case in the technologies of Eternal development
the task is to teach children earlier
these types of ^{well,} some arts, you can even say so
For children this can be perceived as
how is the art ^{there} Yes For example
and often realized ^{there} in paintings, music, etc.
in some dances

as for the old people
well, ^{well,} elderly people , ^{well,} maybe he is outwardly
a person can be ^{and} look
that he is ^{there} Well as if like an old man he is really very young at heart

and it turns out that here it is easy to give a mechanism
how does the human soul
maybe ^{for example} ^{there} to improve the body
if she, ^{for example,} feels young

then the concept of "age of the Soul" essentially doesn't exist anyway
there is a God who created the Soul
but at the next creation
There is no time for God
The soul, in principle, always has the same age.
in essence

and therefore

Well, that's a logical position.
she just helps here to understand the process

exactly that one
what from the point of view of the Soul
the body can be Eternally healthy

so it turns out that there is a concept of "Soul experience" yes
knowledge i.e. knowledge that the Soul possesses
they look like some kind of array of information
and therefore, as it were, there exists a difference in Perception
there For example there is a mature Soul or a young Soul, etc.

although it is real from the point of view of Worldbuilding
logically just clear
that all elements of primary information
which was organized almost immediately
together with God
they have the same speed of development, so to speak
i.e. all people are equal
they essentially have the same aspects of possibility

and therefore, based on this
you need to make the following control combination

i.e. there are many people in the world who need protection yes
give them a management resource
then let them be children
well, some kind of disadvantaged social strata
namely the population
people who are of great age there, etc.

and at the same time, of course, we need to give to everyone and to others
but in any case we highlight a special category
specially for protection specially just

and when we give them control
and they start to interact, for example
i.e. they gain control
they are doing well
some are starting to get in touch socially yes
there is some kind of political, international, etc.
begin to feel like just people
who are rejuvenated there if these are people of age
or children who gain experience

then the principle of equality begins to be realized

with all other people as if
who feel fine there
and have a socially sustainable development position

for God has laid down equality in government
for everyone
and we should, well, generally, educate him to implement

so it turns out that these are my technologies
in my Teaching
this is possible precisely by this
that we provide a mechanism for participation in the meaningful implementation
for example, systems of collective Consciousness
i.e. in the social, political, etc. environment.

Based on this, we form a system of knowledge
so that there would be, for example, instant healing
the person understood something, he doesn't need to go any further
he is resting yes For example

someone there let's assume he's just doing it
systemic health
i.e. everyone has a free and complete choice
and yet here we work almost the same way
on the same level

and when people work together on one task
i.e. we actually do the management
when the management goal is achieved by everyone approximately equally
or even the same
i.e. everyone has an effective mechanism
for example, the achievement of Eternal Life

and then it turns out that
and since Eternal life is a necessary quantity
from God's point of view
then equality of control i.e. equal mechanism
this is an equal opportunity to achieve this technology

and from this point of view
We will take for example a region like Japan
so let's look at the first position again
so that there would be a more favorable environment there if possible
This means there were no unfavorable natural conditions
or there are social events

and we will start transferring control
from the point of view of equality

Well For example there was created a management in Russia
translate event here

i.e. it means we are doing management
for example, first for Russia in June 2005
through earlier time there 2003 2002 already

we are already deducing to a lesser extent
as if the level that is necessary for the implementation
some kind of there let's assume there are positive events there
because you are already picking up speed
and you don't need for example an earlier resource yes

i.e. the more you manage
it turns out that in addition to the equality problem
in creating a management goal
The following tasks need to be set
precisely the task of using
previous control speed as if
to implement the next element
next iteration of control

and that is why here, actually speaking
you can only do so much
it may even be just a logical analysis of those situations
and then you basically work
at the expense of his personal resources

and making events in Japan favorable
we are thereby transmitting information from Russia
as if all social conditions
which well they exist yes of course they do
Well, in different countries they are often defined differently
but it is precisely the intellectual level
level of interaction of personality
this is the level that we can spiritually transmit there
there in the whole country, yes or in other countries, the USA, etc.
large
which are technologically sustainable
and have a certain leadership in their areas, etc.

so it turns out that we
if we consider the concept of "leadership"
we must do to get knowledge of this type yes
we, for example , would be the leaders there

so that or so that we would at least
had no less technological systems
in management in implementation in the economy

and in this way we can
but without any connection there at all
with previous information
so in July 2005 to do
Well let's assume there is such a concept
such as "international referendum"

which could pass
in Russia it can be done
what people there in the world can invest
in the global systemic development

i.e. these are generally events
which can be planned right now
make such a program
and let the people vote
for example, for the creation of such a non-commercial
namely, as if intellectual
this is how signatures are collected and the fund , so to speak
that the World should be nuclear-free there, etc.
but this needs to be done when transferring technology
the accomplishment of these events

i.e. not just collecting signatures there
and everyone who signed up
he must have at least some technology
to really mean to influence the World
and there wouldn't be, for example there are no nuclear weapons in the future

i.e. and in general it may be in the future
so that it is not natural, you can immediately lay it down
and there won't be in the future
there are bacteriological chemical weapons, etc.

so in one word, specific work
against the development of weapons there

and then, well, as a consequence, development begins
starting there in July 2005, a certain situation
from which begins a very well such
in general a positive system of information development
for humanity

For example there in Canada in August 2005
this is the area there on August 10, 2005
this means that information about that is being implemented
what again this well preliminary information was found in Russia
but she will be known all over the world
what does found counteraction system mean
Well, it would seem to some that there was one earlier , yes
seemed to be incurable diseases there

further on there will be [...] information
about the possibility of total protection
from external objects, some kind of space
i.e. special field technologies

in principle they will even be created
at least in the layout and working systems

i.e. this information just needs to be developed
establish connections informative yes
between Canada, Moscow , Great Britain , New York
and try to make these routes
which I just mentioned
they were the routes of universal Peace there

here is a plane flying with some documentation, yes
to New York for example
let it be a level that will allow us to connect
and Eternally develop

and then further
although, for example, the documentation there was created in Moscow, Russia
nevertheless, we still distribute it to the whole world
and therefore, when the plane lands correctly
if the documentation is collected on time
then there are no problems yes
The world is becoming ever-evolving even faster
and that's how it will be in the forecast in any case

it turns out that there are systems
which in any case are positively accomplished

and now the task for September 2005
make September as favorable as possible
in fact, you need to do it this way
so that he would be generally speaking in the ideology of management
absolutely favorable

due to the fact that around September, for example, August
some events are spinning, that means terrorist attacks, etc.

and therefore we already have
some previous information
which must be worked out
from the point of view of the absolute level of implementation

i.e. therefore in management
in creation means management goals
there is a level that must be absolutely manifested
and we cannot, for example, allow
anything in this case is not absolute

Well, in this case it's absolutely simple
that there should be just a norm at least

then it turns out that here
there are already more control structures
moves to the next element
how to fix events without affecting

so we move, for example, to November 2005
we read the reports that let's assume everything is fine there
in September 2005
we just take and look at the newspaper
but we must get this newspaper now

so, and as if reading this newspaper firstly
firstly it improves the events in November 2005
i.e. there are no problematic environmental issues happening
Well it means there are problems in the Far East
more or less means well, the situation is leveled out, etc.

although if we do for example another control
we have to do the management specially
so that the situation in the Far East can be balanced out

and we just take into the future
in relation to this process we are translated
and that's all

and then we have to use it
generally speaking, all existing resources
so that we can have a favorable September
It's autumn anyway

It happens that some processes happen in autumn
specifically related for example there with terrorist attacks on houses there and so on.
and some in general that are kind of out of the ordinary, yes
like Beslan

and therefore it turns out that we can
here the only thing is, as it were , in this management
make an option
what only to use
in general the entire maximum resource
so that there simply wouldn't be any terrorist attacks there at all, yes
or nothing like that happened nearby
and in fact never

i.e. it turns out that this is what we did now
we just looked at the information from the past
and we profile there the possible logical development of events

but in reality, let's put it this way
I introduce such a term as "really"
i.e. you can look at everything much more softly and simply
and it would be possible not to consider it at all
just look at it there it would seem
it was possible not to consider the real chain of events
and take and disband the administration itself, so to speak

and at the same time
when we disband the administration
we get actually well as if the target norm
but taking into account previous events is still an important value
sometimes it is of exceptional importance

therefore, the task is to use the entire resource
therefore in the management goals
in the formation of the management goal, namely in the creation, so to speak
in a fundamental sense
How God Creates Reality

God excludes negative Reality
by moving into the future it turns out yes

i.e. there is a certain mechanism
if we, for example , begin to implement this mechanism
then we can management structure

i.e. implementation into the future
precisely into the structure of the future
introduce the maximum control mechanism

for this, the accumulated experience that you have ^{yes}
what have you learned
you enter into these structures
well, from the point of view of, for ^{example}, so that it doesn't happen again, ^{yes}
there were no terrorist attacks, for ^{example} there are happening
in a certain period
so that there will be no terrorist attacks at all
try to bet on exactly the same September 2005

further to transfer your resource
this is how God makes it so that there is no explosion of a nuclear power
plant, ^{for example}

It brings you to the level of maximum concentration
all knowledge of His and people
and he often considers people's knowledge
as what He conveyed to them

and they will work if you can see it here
where are your actions deeds ^{so} expressed

that you passed on knowledge to other people
then this is already a very powerful control system
which practically always copes
with some current or future situation

because you just have to see it
that you conveyed the level ^{of let's say Reality} ^{yes}
already in Infinity
then it is clear that your resource is connected by the Infinite level of
connection

therefore you naturally control precisely and maximally

and ^{for example}, from the point of view of the Eternity of God
one of the elements
that He imparted knowledge
and receives , as it were, a reverse level of Eternity
but already multiplied ^{there} or increased many times there
on people's knowledge

it turns out that although knowledge is again from God
but it turns out that the knowledge here is divided

i.e. people must have personal knowledge of Eternal development

that's why god teaches

in this regard it turns out that we have personal knowledge
which can be obtained from a person
and then the use of human resources

i.e. transmit specific action coordinates
i.e. view events multiple times
and transmit it there in telepathy to the future
specific people
how to behave so as not to have problems

from the point of view of this situation, try to work through
the situation on Sakhalin so that there are no unfavorable events
so in September 2005
here we are talking about natural problems
so yes, of a natural kind

and nevertheless, try to connect it
with the situation there Means Well, in the capital, yes there For example

and it turns out that we need to connect
generally speaking with the situation in the whole world
i.e. if , well, some kind of phenomenon
or there is a natural one, even if there is an earthquake there
in an earlier period yes For example there in August 2005

a wave still arises that is capable
there somehow induce or promote
already to the action of people yes
in September 2005

so you need to create a very calm background
no earthquakes, no natural disasters
there shouldn't be anything

at least this environment is manageable
it should be oriented like this
and it should be located this way
to prevent this from happening

then comes management, which means it is aimed at that
what are you doing management already on october 2005
the main thing there is that in Japan in North America
including Alaska there were no environmental problems

and event-related ones too
whatever happens in Washington

this may affect Russia
but Russia manages in management as if it takes upon itself
political phase
and it turns out that we have a normalized situation in the World
in general in Infinite development

in November 2005, here I am doing a special acceleration
everything is quite favorable there
from the point of view of world politics
and things are going quite well there
I immediately set up such control

the only task is to cover the federal territories of Russia
a law was passed on improving the environmental situation
precisely at the legislative level
as if additional decrees should pass
so that there are new means of the system methods
adopted for environmental safety
well, as a system level
provided that there is no threat there
in 10 years it will give its result

and December 2005
we are just finishing the working year, so to speak Yes
we can already take into account what has been done
say what problems there are
put here target management
realizing your goal right now

Achieve implementation by December 2005
everything will be favorable there

i.e. the purpose of management
has already been finally formed and created
when you close the full cycle there
some future events
maybe it was there twenty five years ago
not necessarily just a year
and you get that the goal is formed

here is the created goal when it is already worked out
in terms of its relationship with future events
I have now shown the connection with future events
it all means it is doable

at the right time yes at the right time
and it can be done exactly the way you want it to be

This concludes today's seminar.

Thank you very much for your attention
