

GRIGORY GRABOVOY
The Teaching about God
Creation Management
01.06.2005

Hello again
The topic of today's seminar
this is my Teaching about God
Creation Management

in this topic i show
how at the moment of creation
still apply external control

to a greater extent this is required
when you are in management
as if with multi-dynamic areas

when for example Well, let's say a person has some kind of situation
when he is forced to work with his information
and at the same time control
Well as if a predictive phase of their actions

i.e. this happens in the case
when, for example, a person is
in a certain, as it were, informational situation
when he is forced to do
a multi-complex task, so to speak
from the point of view of more structural data yes

and then it turns out that he should participate
in the process of Macro access to your
to their own systems

so it turns out that the creation system in this case
it's not just the creation of some situation as such

because creating a situation
if it is external to a person
there is nothing complicated there in principle as a rule

because the concept of "creation"
it's immediately clear what we're talking about
something is created externally

in this case, the context of today's seminar
it is more directed

to solve the problems of the person himself
in the presence of its structural purpose, as it were

for example, there is a goal of Macrosalvation
a person must endure in this system
personal management
then he should be able to create himself, yes
at the moment of action

then it turns out that from the point of view of logic
This is how God does it, for example
He is at the moment of action
For example, it also creates its own Physical Body
i.e. for Him His Physical Body is also equivalent
like for example the physical body of any other person

creation occurs at the moment of action
the only difference is that God, for example
Well for example, I'm absolutely sure of the coordinates there, yes
creation of the physical body

and therefore when it comes to human action
where a person must simultaneously create
and the physical body
and for example the management structure
this is basically where the main level of control is
on today's seminar

so if possible
when you work now with this technology
it is desirable to participate in the creation system
immediately including
in the system there is the creation of your physical body, including

and then it immediately becomes clear
the element is exactly
why creation management is required
how exactly as if contextual value

it from somewhere
i.e. external control area
must exist somewhere

and here it is

this is precisely the structure of the external control area
it is the determining level in this management
because the concept of "creation of a physical body" by the way
this is a fairly simplified value

it's actually possible to create a body on information there
It's not really difficult
there are other bodies
there are similar information systems

i.e. to have , for example , a healthy, controlled body there, yes
from the point of view of there Infinite development
it's not really a problem
God's point of view, for example
and from the point of view of logic even

but the external control level is to be kept
this is a special task
because I have to
then we need to get new information somewhere

because if the value is known there are no complications
for example, a physical body is a known quantity
there are people

but consider your personal future
this is already a special task
which again falls on
on the same physical body

and it turns out that this task is ahead
it is necessary in this way
what you need your physical body
consider already in Infinity

here is the simplest and, as it were, the most useful element
in this regard, by the way, the technology is precisely Eternal Development
it is a useful technology
to obtain methods of management, so to speak

and looking at your body in reality
precisely in the Infinite development
you get a whole management complex

and by the way, in physiology this complex looks like
as a complex that belongs to a series, for example

Well, from the point of view of substances, these could be vitamins specifically

here to see where the vitamins are in the body
where they are produced from here in the information
we need to make this control Infinite
get a primary management complex

if you want to see where

where are human cells in the future, for example? Yes
there is the cell nucleus molecular level
then this is a specific area of information
consistent with future development

and eventually you
seeing and perceiving the Infinite Future
generally perceiving Infinity
and as if transferring my Perception, extrapolating
on the level of existence of such quantities
you receive the structure of your Eternal development
because there is an Infinite quantity
just because you perceived it
Here

and then it turns out that if we consider
for example development well For example there are animals there yes there are dogs and lions
there we will consider, for example, a wolf
and I specifically chose specific types there yes management
by animal species

then here if we consider, for example,
three received areas of management
For example, we looked at a giraffe
then we see that the difference in management there is very serious

i.e. the gap is the discreteness of control
practically fundamental
by structure, for example, future events
these types of animals

while all people
almost the same level
managing the Infinite Region

Here by comparison you can understand
what if we set the task there as the development of the animal world
to the level of, for example, synchronicity at the level of, let's say, telepathy, yes

how to make uniformity of development of all systems

i.e. the animal must be in telepathy
at the same level of understanding of the event

i.e. the animal must understand
what's going on in technology
i.e. to understand unfamiliar systems ^{yes}
there without talking, etc.

and if we start to take control away

to this area
it turns out that we have practically
Now we need to solve some problems
then you need to pull it out
into the Infinite Realm of Animal Development
there any system
so that it corresponds to the level of human development

and enter into the information transfer structure
at the level of simple free will

the man passed on the information
the system wanted to accept this information
wanted no
but the system must be adequate
i.e. corresponding to the level of human development

so the easiest way is to do it like this
get the initial impulse already
of its future development

as soon as you get the initial impulse
it has not yet been formed
it is built ^{as if} on general principles
but this is already stability of management

i.e. you already have it practically somewhere near you
first level
which is ^{like} the light of the future
some kind of island
who says yes there are no special problems
it's probably just negative information ^{yes}
or some kind of Perception ^{well as if it were n't for that}

and eventually you understand

that generally speaking, formally, a person is always engaged
own task independently

it depends on his worldview
his own state is determined
there is the current future, etc.
i.e. it begins to clearly emerge
precisely the niche of one's will

and when he starts changing information
i.e. well, some complicated information
what is management
change of simple information

and if you work for example
on some kind of emotional level
then you can be
in a certain informational space
or management context
where there is some one wave and it is informative
well, like there is a radio wave in comparison, yes
about the same

this is when one wave stays on the receiver for a long time
then the person starts to get involved and count
that this wave is more favorable
or, on the contrary, it is simply more stable

you just have to change the wave
management may change radically
i.e., and into a significantly larger control system , or something like that
for the better, etc.

Well , to put it simply, you can change the wave
and hear the music you like best

and in connection with this, in this management system
to increase the characteristics of this primary island
we start watching
where does regulation occur in the creation system

because you are forced to create your own body
and at the same time react
to the external information system

and this external area of information

it has completely different properties
i.e. it can be destructive there
On the contrary, it can be sharply positive, etc.
for you

and it turns out that you are forced to work
in the conditions of creation
at the level of ^{practically} choosing a solution
where there is choice there are not just decisions
and some overcoming of the situation is still happening

and you have to already at the moment of overcoming
define one's own essence

how is human essence defined
Well, to a greater extent, apparently
at the moment of some fast situations ^{yes}

but creation is still an element of some kind of quick work

because when the system is created
there is no work being done on it anymore
and now I'm talking specifically about the moment of creation as such

and therefore it turns out that we must
be there practically all the time
in the sphere of ^{as if} or something at the same time
and remote action
i.e. a forecast of the development of the system you are working with
almost your own forecast
you must understand ^{yes} at this moment
what exactly will happen to you ^{mean}

and at the same time you must participate
in external events
It's natural that you have your own goals
Job
and at the time of creation many areas are not always defined

Here's where it comes from, for example
Well, let's say this is an informative action
there ^{per} person
that a person can be unsure of something ^{yes}
Well, if you think about it
why a person might not be sure about something
so this is some kind of information, it exists somewhere, ^{yes}

you can, for example, enter the management
i.e. for the manager who works
from the point of view of the Salvation of the whole World

this area is often missing
it is precisely the area of uncertainty that may be absent

because he has some kind of ideological platform there
he is doing Macro Salvation and he is calm

the only task is that
how correctly he chooses a solution
i.e. it doesn't even look like uncertainty
namely the system of choice accuracy

but if you define
which then resembles the concept of "uncertainty"
for example, what is uncertainty for God
God is sure of everything, of course yes

from the point of view of human logic

and here is the external control system
when someone from outside looks at God
and then He may not understand quite accurately, for example Yes
that first He must perceive
Well let's assume there is a simple idea

i.e. uncertainty
again, choosing a solution for the next level of management
the next link is obtained

and it turns out if we take
and we begin to restructure the concept of "uncertainty"
i.e. we are trying to find where this wave comes from

this only means if
if those people who are watching you are kind of watching
at the management level
they can watch
not from any negative motives
just want to learn

and if, for example, they don't understand something
what signal should they perceive?
from you

what do you want to convey to them
then it is perceived
exactly what looks like uncertainty
i.e. the next wave
and this cannot be allowed

the exact development is obtained
it is a fast and accurate transmission of information
Well for example there on Macrosalvation

i.e. it is enough to select one primary node
Well like a macrocomplex or something and show it
it is clear to everyone, everyone needs to be saved
well or everyone there has to live forever
simple postulate

then it turns out that it is understandable as a postulate
as a technology it is also clear

for example, people live there
and who for example said that they don't live forever ?
there are no strict guarantees either

so it turns out that here we suppose there is
like some kind of probabilistic system
that among many millions of people
there are apparently those who live permanently
logically yes you can say that
by the way, this is true and real

so it turns out that based on this
we find niches for that
to bring something from logic into control
Thus
so that our line of control
all the time there was some kind of human factor

i.e. the line of development of the space of the future
where we bring our point of view
my opinion from accumulated experience

so the first postulate of creation management
it is to maintain the structure of personal experience
in management
and by transforming information
try to spread this experience further

that's all

i.e. you are actually ^{like}
a wave ^{of its own} level of management
of their knowledge
push as far as possible

at the same time as I said
first you find the structure of future events
i.e. you should know the future after all

if you take the controls as far as possible
this is also effective
but for the management to be stable
and you probably developed accurately
then here is the combination of the future system and your personal
provides a point of stable control

for God this point exists always and everywhere
this is the difference of human perception
in one place in a person
God has it everywhere

and let's ^{assume} we could get there
this point
and teach a person to use it everywhere ^{too}

this precise area of control
i.e. wherever he goes he does everything right
^{Well,} naturally, at the creative level
his thoughts and actions

then the analogy is also simple
There is an endless development of the Action and Thought of God
then it must be ^{well} as if adequately reflected
per person
i.e. a person must act somehow synchronously

it's clear to God
His thought is always Infinite Eternal
and there it has a speed that is practically instantaneous, ^{so to speak}
what then should be for a person ^{yes}
in the same status

^{means} for a person actually
if you think about it, in essence, ^{or what,} the situation
it's his physical body ^{there} first of all

i.e. processes in the physical body
are perceived
from the point of view of external control
as simultaneous processes

well, the perception of the physical body
in the logic of Perception
gives that the processes are simultaneous
just logic

but this logic gives the development of the Spirit of man
to control oneself

and this is what we get: Spiritual control
translates you
for confidence at that level of management
that your Infinite Spirit
managing through your own logic, in fact
gives stable control almost always

this point of view actually always exists
at God's
and ^{for example,} in a person, so that it exists stably
or we also always ^{assume}
here you just need to differentiate the events

i.e. to select from the spectrum of events
separate event which

well, it's just normal, ordinary events in the future

with all this, by the way, the future is being determined
not as a structure
vertically higher or further away

in fact, a refined and sustainable future
it is located vertically below in the management

here if the control axis
the future is projected downwards

and if we consider this
^{let's assume} the concept of "development of civilization" let's say ^{yes}
and try to find civilizations that ^{well For example} they are more developed ^{there}
then we can look at the information
vertically it's still lower

It's clear from the DNA structure
root system of DNA beginning of DNA ^{yes} spiral
the beginning of the spiral is some earlier basis
Well, the logic is the same

and we are looking at DNA
it is precisely the development of an upward spiral
therefore more fundamental systems
are located below vertically

it's not like she's somewhere deep there
literally a few centimeters there
but it is below that

and that's when we start to figure it out
with geometry, ^{yes for example} sustainable management
in the structure of creation

then it turns out that our task is to be able to develop in the system
Well, no matter what civilizations or development systems there are
we must equalize the management system

as I said in case we have
the structure of the development of the animal world there
then alignment
at least at the level of telepathic contact
allows animals to be non-aggressive
i.e. the animal does not cause harm

how to prevent an animal from attacking a person

we just need to give a structure for development
so that at least in telepathy after some transformations there
the animal understood the structure of human thinking

as soon as the animal understands
the animal will not attack anymore

and by the way, technologically it works very simply
those. see ^{for example} there is any animal ^{there}
look ^{well}
as a rule, it is very easy to determine
glow coming in the form of a system
which ^{well} correlates with the concept of "Thinking" ^{yes}
in a person

put any control area there
for example, you perceive a tree as anything
the first control object that came along
or any thought

and simply by controlling you pull out the structure optically
you pull out the structure, well, what corresponds
animal perception
to the level of this object

the animal gets there immediately
in the policy as if well, let's say the same name correspondence
by subject of action

it turns out that you got into the security system
you are only working in the dialog system
and not in a mono system

i.e. the animal simply does not have the physical ability
attack
as if this environment develops a system for her
Well, she actually reminds me of a certain one
it's like a kind of safety belt
like some kind of hole
through which the event level of the animal
it doesn't work anymore

and in principle then it works out
the animal cannot make aggressive movements
i.e. it is not dangerous at all by any indicators
not only there physically yes
there is no other system structure
well, like some kind of diseases, etc.
then it's not dangerous anymore

apparently a useful quality for travel
there in the jungle for example, etc.

and when you start to consider
management structure in this regard
then besides

Well For example there is an animal there, that's clear
there are other, so to speak, mechanistic systems of action

like for example God who creates
and the body at the same time

and the entire current Reality
How does he even cope?
Your Physical Body in this Reality

i.e. at the level of logic
it looks like well there is some kind of swimming yes
in the information system

where at the same time the creation of the body
and at the same time regulation
systems of physical Reality

i.e. the next aspect of action
after the interactions are aligned there
with all biological objects
except for man
there is no need to align anything with a person
a person is already a complete match

then you start interacting
into the interaction structure
Well For example there with the buildings

here an element arises that is quite interesting in general
for the building, you can even practically consider it

enough to get
for example, some one type of precise reaction
for example, you saw a multi-story building there
or just a building once somehow
and recorded his image as a very simple image

the building has a specific outline
and it's impossible to hit it there, yes

this information was recorded
this is enough to control the process
it was already effective there

there is no need to look for any special paths, etc.

that's why I'm specifically going into detail
these well it seems that some concepts are quite simple
Well, at first glance they are completely natural

and because we need to try to cover
the entire control area through some details

but work with the entire management area all the time

and that's when a person starts working
with the entire control area through the details
knowing some basic principles or techniques of management

then it becomes clear
that in fact he is safe all the time
when he at least analyzes the structure as if it were fundamental
or more fundamental
the one behind the action

and here is the next postulate in the management of creation
it is a fixation or a perception or even an action
with fundamental structure
as if a preceding action

any preceding action
i.e. the one you encounter
has some characteristics earlier yes

or it can be called a reason
but it's better to look beyond the cause
and into the fundamental root of the situation

i.e. why does this root determine this position?
there is something in your position and in your actions

and then you start coming back to yourself again
as a rule, it is the same complex of frequent tasks
which you may have encountered before then

and if you haven't solved it yet, well , here you go
you have to add something now
as a rule

so and if there are some new situations
they have a different level of management in general
this usually looks like this again
precisely in the form of the correct choice of correct actions

that's why the word "rule" is used here
can be used often
that the situation here is actually simpler
when the situation is new

the future is a multiparameter system
and often a lot of new situations
are overcome quite easily

there are no elements of simultaneity required there
in creation

if the situation is, for example, of an earlier type
Well for example, from the point of view of theory
let's assume a Buddhist level of governance there on reincarnation
where the situation seems to start to develop again
it is considered that it needs to be worked off
if it hasn't been solved somewhere yes

one of the concepts
namely theories, for example, of the Buddhist level of management
from the point of view of Buddhism

and according to reincarnation it is considered
which is not necessarily there apparently
to practice the same thing often
something similar can be worked out there

but it's practically the same
often you have to sort of refine it
almost one to one
situation
until it is solved at its root in Buddhism
then these situations may arise

considering that the technologist who works
in the technologies of Eternal development
works in the system of collective Consciousness
and there are some systemic actions laid down there
which generally speaking at a certain time
had a very effective often meaning
even in terms of the speed of development of civilization

but in the conditions of, for example, the nuclear age
when you need to stop a nuclear explosion there
there other parameters are already entered

For example there I entered the karma of Salvation
by analogy where through Salvation you solve all issues

For example well, they've been worked on
which are a system of cause and effect

This is one of the management concepts
it is possible to develop some others
i.e. a person must urgently do something
to solve the action well then its action yes
i.e. primary

that's why it's the root cause
i.e. an action that has
the initial cause and the next one
maybe in solving the following question

i.e. the next level
well, something more axiomatic
mean already look like
not as a level
there may be some information fixed

what is the next action
if the situation is considered in depth
contains some grain some root of the solution to the situation

here is the understanding of this root
there is also a fundamental understanding of the reasons in fact

and it turns out to be integration in action
i.e. a person can instantly create technology there
or perceiving some technology
in the form of instant action
creating your own Spiritual structure
based on known knowledge
This means that he already defines his personal system of behavior

i.e. personal system of behavior
you can take any information
from there, in fact, where it is most appropriate for you

i.e. you become completely free in your choice
and then management of creation
not only there your information
and some levels of current elements there
remote

so for example
well, for example, there are remote elements there
they may be physically somewhere near you, then
but nevertheless mean an area of distance

this control will already be quite simple
from the point of view that you are free to make decisions

and that's when you move on
to the level of freedom of decision-making
all control is fixed at this moment

i.e. the first fixation of the control impulse
comes at the moment
precisely the perception of freedom in decision making

even by the way when driving
when you heal someone there
or you are in control
from the point of view of their tasks there
level of freedom of action
means that the system has been achieved to be sufficiently stable

i.e. well you can always be healthy and never get sick
however, when solving personal problems
there is still a level
when there is an opportunity, for example to relax there yes

made management
the first level arises
that you can somewhere perceive the result

what can be called a rest in this system
this is the perception of the result
it's a kind of suspension of action
Well, let's call it "rest"

then it turns out that we perceive at this moment
like on some kind of projection screen there
we take the element of Consciousness
at the same time, of course, we control
all the dynamics of all processes but
it is in the information

and on some screen
it even looks more like a core of information
there is such a concept
like a "rod" of some size
nodal center

and it is on this rod

knowledge is projected from some situation

then it turns out
that you actually have such a level
already the next level of management

i.e. you perceived the action
i.e. they perceived it as a level of freedom or relaxation

and then it turns out
that some optical radiation from the result yes

i.e. you may often not differentiate
result
how not to put things on the shelves so as not to waste time
i.e. do not translate into pictures, etc.

and just take everything into account
what is the shape of this rod
if it is somewhere vertical there
this means that the control was carried out exactly in this interval

so you don't have to see the rod itself
i.e. it's more like knowledge of the Soul
this is action

and that's when you start to come out to the knowledge of the Soul
to the True knowledge of the Soul
then deep or in-depth analytics arises there

what I just said
you have sort of worked it out, actually, management now
Well, together with me, for example , now you are doing management
and then you develop control from logic
or there Spiritual status

but the Soul does the same thing
simply the level of interaction and action of the Soul
he is really deep
in terms of the depth of information there
depths of Infinity of actions

and that means the Soul is somewhere working towards you, yes

and here we come to the fundamental level

precisely the fundamental plan of Reality
from the point of view of the creation of man or himself

that there is a certain area
it is quite clearly visible here in this technology
where the Soul works towards you

i.e. she works from somewhere
this is exactly the internal level of external control yes

and here it is absolutely clear
that three years even before the birth of a person
for the first time the area where the work of the Soul begins appears

using this technology you can clearly determine
where your Soul worked
there to there to biological conception in three years

consider
the structure of the Soul's own development
in the control space

then it turns out we found it
first control point
well, a natural type so to speak
what God created

and not just some external one
and the Soul's own structure
sometimes it can only be the light of the Soul
i.e. it is not always directly the Soul
but even find this level
it already means enough
in terms of what you do accurately

and from here when you find
this light coming to you
you are already in control of yourself
from the level, for example, there to the beginning of conception, etc.

then it turns out you come
to their True tasks
not in the space of understanding as it were
or the logic of the development of Thinking
thoughts are fast dynamics of some processes so to speak

and you come to static tasks

which were in front of you initially, so to speak

and here you can follow
where did you initiate the tasks anyway
what is your personal task

as a rule they are actually united
at this point sometimes the tasks are not even defined in words
because it can be down to the verbal level

more management
it is also important here that there is a clear gradation

where did the word even originate
and where else is the pre-verbal level

here by the way it is clearly possible to determine in this system
high-speed systems for the development of any technology
for example the printed word how quickly it spreads

in this technique you can find
very clear forecasts for business systems
how do they spread
the first primary actions of any system

because in the future when you work
well, in the conditions of your physical body
and also acting in the direction of Eternal development

you are actually synchronizing
with a level up to your own creation

and that level is quite independent
it turns out that it is quite objectified
he doesn't come in
in the structure there of the emotional plan as a rule, etc.

it's like external independent information
about your own actions

i.e. some predictive characteristic
which always exists with you
and you can always
like some kind of matrix or tuning fork
project all future events
current including

and if for example you start to connect
these events

i.e. going there we will say yes

before the fact of conception it is there that is meant
biological to a greater extent

although it is possible to exit before the fact of formation
for example, your first thought, etc.

i.e. you can choose any first complex
which one do you think is the first
and find the primary structure

what corresponds to this

therefore you already have
a certain control level
which is external
in relation to what you create yourself

and that's when you start
here to move in the structure of development of Consciousness
you can see
how your Consciousness develops

i.e. for example , you read a book and learn some science
you can see how Consciousness is in general
as if it were developing at the optical level

i.e. how, for example, is this book studied there
your Consciousness

then you can adjust it
there you can take it there mechanically there for example, move it lower
if the development of optics is high

and by the way a very simple element for working with a book
for example, if we trace Consciousness from this point of view
and now Consciousness begins to work with the book
basically it arises as a kind of influx

i.e. here is the outline of the book
begins to flood into Consciousness
and if it starts to flow over the pages as if Yes
lie down on the table
you can pull it off mechanically
fix in the structure of the book

then the book is mastered much faster
from my student practice means

and when
in principle then you can put a thick book there
in a few hours at least for exams it is possible
learn quickly

so , in principle, that's the main thing here
detailing
we still need to consolidate the structure of Consciousness
on some page
means internally
i.e. select a page
and fix it directly from the back side

then the book glows all the time while the exam is going on

so you can read any page directly
any text there with page reference
and some kind of technology, etc.

Well for example, personally in my management practice
so there were for example situations
in general, from that, in general
and for example, at university I started management
there are still quite often thick textbooks there
especially in the first year for some reason they were
quite thick in mathematics

and it turned out that here I had to work more
on exactly this glow element or something
what does it mean basically i prepared like that
well literally there in a very short time

there is a university there, a free organization
it was not necessary to attend
and there you just had to know

that's why it turned out like this
that this is exactly the technology from my personal practice
always fixed like this
that I always recorded the page number in Perception

and for example, I perceive some text
there are some formulas and so on.
and I always know on which page the text is written

i.e. if you are missing some detail, let's say Yes
it starts well It's like there's already some kind of system
that you have to make an effort
enter into the logic of the process for example Yes

and the logic is clear anyway
basically any process
is reflected
in the system of fundamental Reality
's always nothing special to understand there

there is some kind of control mechanism
by the way, this way you can understand any system at all
any system has
here is the next fundamental root
it is enough to perceive its glow

and what's in between
does not present any problems at all as a rule
well, some kind of knowledge system, etc.

and that's why it turns out
what's most important here is to retell this system yes
transfer the system

and that's why I fit in here
to the main level, or something like that
in management according to this methodology
ability to pass the system on

i.e. if you can pass it on to someone
Well for example , if we are talking about an object
it is necessary to convey its contents, etc. yes

then it turns out that you get what follows
system
precisely from the point of view of absolute stability

i.e. as soon as you are in the creation system
go to the transmission level
consider that after freedom of action you already
you get something like that
maybe an expanded system of freedom
or closer to the True system
Well as if from the point of view of Macro-sustainable development

you managed to pass it on
therefore you are no longer an autonomous control system

i.e. your control of your own creation
where your creation is included as an action item in fact
into the structure of your Consciousness

so then you actually get the same
that you are not just there in the future
due to viewing elements yes
are you located
and the fact that you are already technologically

i.e. you can do it
and as soon as you start to consider this area
as an area close to you
then the usual cycle is already happening here
the same work

i.e. you come to the primary value

where did you start

and just like with God, for example
each of His next actions
This is also the primary Action
from the point of view of human logic

by the way, there is often no section for God here
He has a different system of perception

but from the point of view of human logic
to pass it on to other people
we'll have to dock here
the starting point of the action and the end point
so that they coincide during the management process

once you get the match level
consider the area worked out
move on to the next one

it means one of the levels already
well, some kind of postulating systems or something
you can call it that here too
what a coincidence
work start and work end points

and at the optical level

and ^{as if} even the leveling of information
i.e. you are left with just an informative background

but the informative background is calm
here you have worked out the whole system
and near your physical body
practically quite standardized information
arises

and then you understand exactly
that's all
and generally speaking any action
what does it represent
really just information often

you can say
what in the big one ^{or what Well maybe} in a deep level of management
it's always like this

i.e. any system
naturally it is possible to restructure there
and get the Norm

i.e. it is always visible
what is the current state
For example there is physical management
it's always just working with that information
which affects these systems ^{yes}
namely, already of the physical type, including

and then it becomes clear that the work is very simple
everything depends only on the time of work
and that's all

i.e. if there is enough time
worked more efficiently
but the managers who study according to my Teaching
there is this task of Macrosalvation

he is forced to be a manager according to my Teaching
still always back up the system like this
so that not only there work closely
for some of my own purposes
or other people
or only through Macrosalvation

there should always be a reserve
to control future events after all

and at this level there is always a structure
where you may encounter
at high speed, as if at super speed
these optical quantities
well, which mean some events
or they are negative
or are they, on the contrary, positive?

and if you see any negative systems
you need it now already ^{yes}
being precisely in control of creation
in some control value
strategic even future
change events for the better

i.e. here you come
to a sustainable management system
when you are at ^{that} level
which I just showed you
where you already react consistently to many situations
^{means} everything

and then you start working

in fact with the system of the distant future

that's when you start working
with a distant future system
From here on everything is much simpler

because in any action
well, when you, ^{for example}, are talking to someone there
do any kind of work, even any kind
if you work there alone ^{for example}
somewhere there you are writing something, working on the computer
in general, you are just ^{in a state of personal work,} ^{yes}

this is the system of the distant future
as some kind of projection system
she is perceived
as your own personality
which develops there into the distant future

pay attention here
of your personal action again
I already started from there
i.e. the information is coming to you

and the point of your action, as it were
coincides in the system of the distant future

the further the future, the more accurate the coincidence

that means in the very distant future
you can see yourself
but there you are already more technologically advanced
from the point of view that you always solve problems
in terms of their primary impulse

as soon as the task arises
there is a solution right away

i.e. you enter
into the system well or more controllability of information, so to speak
at some level you understand
that really then there are no problems

transform any information
for example, there in an absolutely creative aspect
for example Eternal development

and then it is already clear that Eternal development
it is like an absolutely stable value

exists objectively

i.e. it's not just a desire there often
not just even a certain Law of development there
and this is the same level of information that exists
well if there is a level of physical Reality there
which is perceived as objective Reality

then the system of Eternal development
the same level of simple information

and we this level of information
we can basically work with him in the same way

for example there in physical Reality
there is land

you can plow it and plant wheat there, for example

what can be done
with information of Eternal development
something like that too yeah

i.e. if a person does something
For example there he plows and grows wheat
that is, similarity in relation to the Action of God

that means on the information that is related
precisely with God's information
namely the information of Eternal development
you can do something like this

the element is very simple
physical action is projected
on the structure of Eternal development
and then we can see what to do

those. Eternity information
starts as if Well, should I wrap a person up ?
into such a unique multi-component glow
light tones
and in principle in this system a person
very dynamically overcomes any situation

i.e. the easiest way
overcome some difficult situations
even if they are just informative

often informative situations
distract a person

and he has to react to them yes

i.e. provided that the prognosis shows
that everything is absolutely normal with the person
some information from an external system
even if there is a non-dangerous problem at the same nuclear power plant
she will have to deal with it
to a person
if such information is located near it

then it's easier
knowing that the situation is under control and there are no problems
It's easier to enter into the dynamics of Eternal development

so to speak, in a mechanical way

i.e. a segment of your Consciousness
falls into this structure
at the first level of approximation this structure has
such a slightly golden color
and then more silvery -white shades
and then there are often different shades
but always bright ones

i.e. the control of this system is light tones
if some dark systems arise
then it's not so natural anymore

that's why it turns out
what should we do in this as if well, a dynamic system
to place an element of your Consciousness
which constantly supplies dynamic information
i.e. ultra-fast dynamics

something is happening in this world
but you are at least one element of Consciousness
in this system
then everything will be fine with you anyway
you move faster
from the point of view of his personal task
Well, that's Norma.
or simply any task, of course, creative

i.e. when you start to perceive this system
as a mandatory access system, yes
your management actually
of course again creative

why am i repeating myself
because we are not talking about any management after all

if it means Well, some kind of option is assumed
there is even a shift in some interests
what would these actions be like? as if by a rough action

it is still required here
analyze the picture and do so
so that all systems develop harmoniously

i.e. to give Eternal life to all systems

they basically don't bother you anymore
he develops himself forever and all
somewhere on their own tasks

i.e. the ability to redirect the system
even if the system is aggressive

i.e. it is important to be able to
this system as if Well, maybe I should redefine it?
from the point of view of your positions

but what will actually happen to her
as a rule you will then observe
that you were able to stop the negative action there and so on.

in case of treatment of a disease
This is a specific technology for treating the disease, by the way

because well, take it even if it's a tumor, for example
or there is some kind of virus
then remove the negative system from the body
if to destroy
there may be intoxication
or some consequences from destruction
just a material substrate

that's why it's easier to make a sort of instruction
translate into the structure of there earlier time yes For example
and get slow
it is the natural reduction of the system

i.e. even in treatment this principle is quite good
i.e. we do not destroy anything
we just sort of reformat, reinterpret, so to speak
system
we make it different and that's it

and that means often
that right in this place where the tumor was

just healthy just healthy tissue arises
i.e. it's as if there are simply no scars left

this is the technology
This is one of the technologies that is possible

and when we, for example, start thinking further

how can we, having already such a dynamic development
their own tasks
get the norm
then the norm further is very simple

management of creation consists of
that you come again
in the reverse impulse already towards itself
and you see that you already perceive yourself as stable

and you can always be absolutely stable by the way
just take in the information
near you which ^{yes}
just that it is stable

i.e. you have no problems
because you received this information from the outside
i.e. you have completed the creation cycle

as soon as you perceived
it is precisely stability from the outside

and by the way, this technology is very good
when to take
or a quick solution
or some information
that's the one that needs to be dealt with quickly, ^{yes}

maybe you don't have any problems at all
but there is information that needs to be addressed
or in case of real problems there, etc.

that's why this technology
by the way it allows real problems
not to outgrow
in some ^{well} or more complex systems, etc.

and this control circuit allows it
keep it all the time
at the level of creating constantly positive information

This is where I end today's seminar.

Thank you very much for your attention
