

GRIGORY GRABOVOY  
The Teaching about God  
**Creation of control element base**  
23.08. 2005

Hello again  
the topic of my seminar today  
This is my Teaching about God  
Creation of control element base

in fact, we are talking about that  
that we create controls as such  
i.e. as an area of information

and based on the existing  
Well as if some kind of recruited management base  
we carry out management  
or it is a control that exists  
as a field of information as a certain event

or is it an element that is  
namely the action of management

therefore in this management  
it is necessary to select the element first of all  
Well which is most necessary for a person in management

and if a person, for example, commits  
some level of self-recreation  
it turns out that he can highlight this level  
the same as the element base in its management

and so we are talking about that  
what we should based on different elements  
make a level that fits together  
in the form of a concrete management concept

i.e. actually connect the elements  
get holistic management

i.e. we are talking about what we highlight  
not only there, for example, some strategic level  
or is it local?

but in fact we create

structure of a person personality of a person  
due to the fact that we still highlight

some kind of element base  
i.e. some necessary level  
which is now necessary for a person

and here to highlight some element  
it is necessary to consider first of all  
human action  
i.e. its purpose  
wish  
some systems for its implementation

because it is impossible to isolate an element from a person , for example  
those. man is indivisible he is one  
and therefore one can only highlight its action

for this purpose one can compare his inner desire  
Means With what he should do from his point of view  
and consider  
what then is the element of its action  
some local specific action

then it turns out that we need to consider  
human action so  
to make it clear, for example Yes What does he need?

then every person is  
within the framework of their tasks  
he doesn't give information, for example, private information in general  
if he doesn't need it, the person

then it turns out that we are talking about what needs to be highlighted  
in fact, some kind of generalized point of view  
where the Action of God is already present

i.e. it is easiest to consider  
what does God see in man  
then there is no need to contact the person  
and you can see there, for example, that there is God  
and this element is sufficient  
in order to organize, for example , the same yes  
or improve it

and firstly, we get collective assistance in management  
i.e. there is an improvement of a certain situation by other people

that's actually what we're trying to achieve  
due to personal management there

and yet accuracy  
that we see the task set forth by God

then it turns out that it is God who gives the task  
At the same time, it also gives knowledge about that  
how should the task be distributed yes

it turns out to be an external observer  
he can see or there is a manager  
as my part of the task

i.e. not how can there even be a task of that person in full  
but precisely as a part of it

therefore the elemental level of the manager  
this is still a solution to its own problem  
at the level of, as it were, universal control

and now through general management you come out  
to solve specific problems

for example, you need to make up there  
Well some well For example there is the word yes  
some action

then it turns out that this word is organized  
and it was as if it was synchronized in the control space or something  
with the structure of future events  
all events

from the point of view of technology in eternal development  
the level of self-recreation is also a continuous level

i.e. God He can, for example, recreate Himself  
but at the same time He has an inseparable level of His development

it turns out that this is the level when we have  
for example, development at the next level there are words  
the next level of events

This is the level that is closest to a human being  
i.e. you need to see  
in what way for example personality yes Human  
creates some kind of control  
Well suppose the word

action  
event

and this is the level of interaction of information  
when a person interacts with himself, *for example*  
i.e. his word interacts with the person himself  
this is an element that allows you to see

what needs to be added to the management

i.e. how to highlight the next element in its development  
and so that this element is stable

i.e. the next element is already further from the person *yes*  
i.e. it is still an element of more future events

*Well maybe past*  
but mostly these are future events

and the ability to highlight this element in the structure  
taking into account, *for example*, the structure of the preceding events there  
taking into account all the previous information  
we can see  
that information that was in the past  
may be found as resolved in the future

i.e. all elements of the past  
*Well if this can be applied here in management*  
here in general aspect  
*as if to the whole it is possible*  
but in private what does any situation mean  
which happened in the past  
as soon as it appears in the future  
this is already a decided management option

i.e. in fact we can come to the conclusion that  
what does it mean in the future any control element  
is solved  
i.e. the element as an element of action as a philosophy of management

and it turns out that if we consider it this way, *for example*  
information  
but *in general*, information is usually arranged that way, *yes*  
for the personality of a person

i.e. a person is faced with some of his own tasks  
often based on some information in the past

from his personal experience there

and it turns out that he can compare  
with some kind of phenomena, well with whom he is familiar  
i.e. he knows some informative data  
he was known somewhere in the press or his personal data is there

and it turns out that the information was in the past  
then it has been solved at some level at the present time

and if this current level is made very dynamic  
i.e. as an element of action  
i.e. the current element is an action, for example there is universal

it turns out that any information is based on the past  
this information does not pose a problem for a person

and considering that there, well if you look at it this way  
again the element of action in time  
i.e. time as an element of action  
it turns out that here in principle  
wow, wow moving forward into the future

it is possible to make such a control structure  
that we do not consider the element for example there is current time  
and we take precisely the action of control  
as a structure of the past  
and the structure of the future, for example, at the same time  
where elements of the past are favorably resolved

i.e. an element of Eternal development  
it turns out that this can be entered into control  
this is a favorable solution to all situations

to consider some situation, for example  
as a structure in eternity

it is beneficial for the person's personality  
solution

well right here in the management  
there is such a principle of approach  
what if we are looking at some element  
we must be able to create it yes in management

and when we consider then

how to create it

i.e. how to get closer to yourself, for example Yes in management

then here it is clear that it is necessary to approach from the outside

here's if we consider the position

how does God approach Himself?

in management well in Self-awareness

then God must approach Himself from somewhere outside

i.e. its element of consciousness

must move in relation to Him

and God is in a specific place

then it turns out that for a person it should be the same

i.e. self-construction at the level of information elements

this is an external action of a person

in relation to oneself

a person must choose some point of control

and by analogy with how God does

he just has to do this

bring into the structure of the implementation of the action

i.e. the body as a structure for the implementation of its action

he won't bring any information into the body there, yes

if necessary, he contributes of course

but in principle he is moving towards a person

is already performing the action

then it turns out that we have

well like some kind of check mark yes

that the action is done

and it looks basically the same

here and immediately we get into the action

and man as a system of reflection

and it turns out that in this case

we see the action carried out by a person

due to the fact that a person decided to build there

primary element emanating from it

i.e. we work

not by the structure, for example, of internal pressure, yes

on the optics of the Mira <sup>there</sup>

and we work with external optics in this case of control  
there is an external control environment  
and we work with the elements of the World  
which are inextricably linked with the World itself

i.e. that's why we can work very quickly <sup>there</sup> super fast  
take control right away  
without introducing structure  
into the inner <sup>world</sup> of man  
into the internal process

or without taking you out of the inner world

i.e. the ability to work due to this approach  
as the allocation of precisely what is necessary for a person  
namely the element base

and when you start to see  
how else can the process be built  
<sup>well</sup> more dynamically there, more optimally

then it is clear that all future events  
they can actually be in current time events  
how to profile <sup>for example</sup>  
some kind of problematic event there maybe

you need to do it this way  
to make the event appear in the current time  
and in the current time it did not happen  
i.e. it turns out that it's <sup>okay</sup> in this case  
negative not implemented <sup>yes</sup> in the current tense

so that it was  
in the future, negatively, it is also not implemented  
you just have to have this component  
<sup>as if</sup> an element of a negative type event  
try to pull closer to the current time

as soon as you start its element base  
highlighted as a certain area of information  
bring closer to the current time  
the event is starting to unfold for the better

here is the level of influence on the event  
i.e. you highlight a specific form  
there is an elemental form of information

when you start to <sup>create</sup>  
some kind of base of universal systems  
consisting of precisely the control elements  
from the methods of management there  
from some fragments of events  
from action to events

i.e. this is, <sup>in general</sup>, a fairly multi-level element base  
in this case, you can look at it like this  
and it can be folded in some level  
i.e. some kind of universal module  
which can be folded out  
and get some kind of uniform action

i.e. we get that the internal action

which is an inseparable action  
there are personalities or <sup>there is</sup> God

when we receive  
universal element base  
then this is an internal action  
becomes your technological action  
element of your Consciousness

i.e. based on this system which is universal  
your Consciousness may already be receiving a stable  
comparable

Well For <sup>example there</sup> with some long-term level of management  
result

i.e. you get control  
because you have a universal reference level

and then you get  
really always stable management  
because it is a universal environment  
it can be deployed <sup>in different ways</sup>

and this is the experience that you get  
Well from this approach to management  
this is an experience that your elemental control base  
builds on the level of just matter, just space

for example, set a management task  
where the control space needs to be built  
or the space around you for example Yes  
at the level of the physical plane of space

if space is built accurately  
then it turns out you have it all the time  
next level action yes  
the next level is there movements

and for example there in the treatment of diseases  
often the ability to highlight the structure of personal movement  
or there is another person in motion  
if we are talking about the fact that he needs help

maybe there is a person who can be completely healthy  
just at least control yourself

then here  
it is the ability to highlight the element of movement  
yours for example there is no physical body

in this case you do not consider the structure  
in the form of well such an object of information as a physical body  
but you just consider that the body exists in any case  
since it exists at the current time  
so in the future naturally

i.e. this is a habitual state of the personality

and then it turns out  
this is the level of information translation  
that the physical body is itself  
in control action  
by doing so you introduce a structure of absolute control

because it turns out that when you think that  
and generally do the management  
that the physical body exists in any case  
it turns out that we are the physical body itself  
we introduce it as some kind of absolute element of action

i.e. we can say very clearly  
what if we assume to consider the element of action  
namely the physical body  
control this element yes

the whole physical body  
well including the Spiritual level  
level of action of the Soul

i.e. the physical body and all the attributes of personality  
this is an element of action

then it turns out that it is an approximation  
i.e. self-construction of information around you  
this actually works out  
what we have in general is self-construction  
on the structure of one's own personality

well just like God does  
He is every next piece of information  
does exactly on the structure of one's own Personality

i.e. it turns out that if, for example, there is some action  
what's happening in the world  
then it is possible to demonstrate such control  
i.e. consider  
Action of God  
human  
and all people in general  
in relation to this action

and it turns out  
what is the control element from God's point of view  
is a universal action  
including his own where He Himself was originally  
well is a manager  
and it comes to Himself it turns out yes

then build on the platform  
there is own Thinking of own personality  
self-luminosity  
this is the most accurate construction  
where a person does not depend on anyone

it is enough for him to allocate control  
as an action of the external world  
and for example your personal action  
and build space for example there are thoughts

as soon as he begins to build the space of Thinking  
then there is a collective reaction  
for some action  
any there can be a random action

or there is periodic action

and it turns out that this is vectoriality  
those. personal action  
Action of God  
collective level action  
manifested at some point

this is well actually constructing space  
this is precisely the construction of the space of action

and yet with all this we have in this space  
Well some such Reality  
which in general begins to resemble ordinary Reality  
i.e. some actions and movements are taking place there

and for example, what is the reminder of the usual action yes  
i.e. we built Reality  
how to view at all  
that this Reality is built by us for example Yes  
and not as if but not by itself it existed

here is a very clear boundary in this management  
what we build is the newly created Reality

then it turns out in this Reality  
must happen  
some well For example there are random events

so it works out  
that the first element of God's Action  
to show that He is this well space showed yes  
as if built  
Well is from a human point of view  
an element of random event, sort of , well, sort of random

i.e. an event that is not included  
into a linear system of cause-and-effect structures

then it turns out  
that the space constructed in this way  
it is actually identified  
as a space already beginning to act

because you can build space  
but the same thing happens

then how to understand that the space has already been built  
at least to some degree of control

that's exactly one random event  
and we know that something has changed yes in this world

Means and this is an external event  
this is a diagnostics of the constructed space  
i.e. these are the contours of the event

if a random event does not occur  
we can sit and wait there for a long time  
and consider that it is built  
and where is it really for example

Well let's say I'm diagnosing an airplane  
how do i know i have diagnosed the plane correctly  
Well although for example there is no information yes in real time

Well For example there, exactly second by second, diagnostics are carried out  
how to understand that the diagnosis is correct  
and I put the information correctly

one thing can be said there  
well, yes, that's the experience, everything is accurate there  
i.e. I can say based on experience  
This is roughly how I acted technologically  
that's how it turns out  
then it must be accurate

and from the point of view of control logic  
I have to enter some random event

and it should not affect the diagnostic result

i.e. I do diagnostics of some transport yes  
any control system so to speak  
and if I enter  
this is especially clearly visible  
For example there in some aviation equipment  
such a maximum concentration of different systems

and it turns out that if I enter a random event  
and the information is saved  
then the information is accurate

i.e. I may not confirm

if I can see right away that it is accurate  
but if I need to look at it technologically, for example  
that it is accurate  
I enter a random event  
as a vector of a random variable

the simplest way is this  
in the aviation system, as it were, of control  
where, for example, there is a high capacity of some technological systems  
nested for example there in the means of transport yes  
on a plane for example or a helicopter

then it turns out that we can  
from collective awareness  
take some factor  
Well which refers to the system of random events  
For example there to consider  
design of the vehicle  
some element of the design  
again the elemental system

and just try to concentrate on it  
Well For example there strengthening the reserve of this system

i.e. increasing the resource in fact  
so that there is this transport there functioned favorably

and that's due to the increase in resource  
we see that the structure is preserved

i.e. we are a random event  
Well we introduce some positive event, for example Yes  
if we enter it ourselves

from the point of view of control logic, for example

here for God  
it turns out that any event is positive  
in this regard

i.e. It gives the structure of creation  
He introduces for Himself personally, for example  
creative level of management  
and then it develops differently  
depending on the will of a person, for example

i.e. it turns out that this is the next level of development

once we have built the structure  
Well <sup>they designed</sup> a reality similar to that one there  
which was before the beginning of such construction

then here is the docking of this Reality  
from a factual point of view, <sup>so to speak</sup>  
Well reminds me of that structure  
that there is some kind of train there, <sup>yes</sup> which a certain carriage is traveling  
and next to it there is one that is built and it wants to be the same <sup>yes</sup>

and here he is somewhere nearby, here he is already close there  
and here comes a docking somewhere  
<sup>for example, a carriage called " Reality "</sup>  
it starts to connect with the one you built  
at some level they must coincide <sup>yes</sup>  
in some kind of Infinite version

i.e. in Infinite control in Infinite development  
these two control objects must coincide

i.e. you have to build it so perfectly  
control design  
that your structure of Thinking coincides with that  
that the whole world has changed somewhere  
and you should  
not just there according to the Laws of universal connections  
everything influences everything at once

namely, to select the control element  
and this element this autonomous control area  
connect with the entire outside world

then it turns out when you make the docking  
i.e. there is a combination of these systems  
then in principle this is <sup>basically the same</sup> in many ways  
and the mechanism <sup>for example there</sup> are treatments for people

i.e. the ability to separately develop a treatment concept

and lay the basic structures  
and then combine it with the Reality system

not only for a specific person  
who needs treatment there  
and in general with the whole system of Reality

i.e. this outer carriage, <sup>so to speak</sup>, conditionally

which I spoke about as the system of Reality, for example

and which carriage was built  
This is a control system  
it turns out that it is also possible to do it specifically  
and on railway transport

to diagnose some kind of car really  
you can do the opposite  
just take his image informative  
see the difference by connecting lines

these are the lines of communication of information of a physical object  
they are going through something, for example  
if we have in the space of Thinking  
some piece of information  
which corresponds to the physical wagon there

let it be some kind of information section  
For example there And the letter yes

if we think about that  
this is what a carriage should be like  
and we start this carriage which we are sort of thinking through  
lead to this area  
then very slender linear lines appear  
and right here, specifically, even practically along the axis of symmetry  
information arises  
Well in fact, information along the entire line can be revealed  
in fact, it is even more visible  
directly on the fabric of the physical carriage

i.e. if we don't track it in the information  
where are we then we are considering  
physical wagon  
and where is the information wagon?

then the information itself  
it arises  
from that part of space B of perception or there Thinking  
where exactly is the physical wagon

and here you can immediately see for example there is a defect  
or some problem yes specific car

i.e. he actually starts as if Well glow internally  
i.e. you can just see it literally

and the structure of the material  
and what's going on there

and this naturally also applies to management  
aimed , for example, at human health

unlike just  
from some technical system or any other  
the person is in control  
into the structure of its future events

and it turns out, for example, his future events  
Well things are looking good in the future  
there is a primary action as if before  
until the moment of a random action , yes

and the next action  
must necessarily be favorable

i.e. man is manifested in management  
as a level so to speak personal level  
where is the control  
in that space of Thinking where there are future events

and here's technologically, if you think about it at all  
For example, a person thinks  
in what time interval does he think  
there about technology yes if I may say so  
about a person

then he thinks about the person all the time in the future  
this is the area related  
to the structure of future information

if we take the element of human Thinking  
look  
how does it look even in optics yes the whole outside world  
see what the future means

and then you can see  
something that concerns people in general  
there is each person separately  
it's always in the future

this means that we get the structure of Thinking  
that's how it's designed

that we are always somewhere in the category of the future

i.e. the controls are as follows  
what we are looking at all the time  
it is the categories of the future for people

i.e. we are laying it down for people  
exactly constantly In eternal development  
i.e. the future is always there

but for other systems, well generally speaking  
there are primarily those elements that are near the person  
who refers specifically to the concept of well there  
For example there are "biologically living objects"

there is such a distinction in this information system  
i.e. elemental systems  
what is called for example there in In human perception  
"life" as such in biological manifestation

and if some technological system yes created  
which in general can be created  
a person can create it  
the car can be repaired

here the static of the current time is going on all the time  
and here you can even pay attention  
which is quite simple from this position  
generally speaking, diagnose any system  
I mean there are buildings there, some kind of structures like this  
exactly which relate to the structures of statics yes let's put it this way

from the point of view of what  
statics means manifestation means structures  
which depends on the person

i.e. a dynamic system  
Human

and statics is something that a person can reproduce  
it doesn't have to be just a house , it could be a satellite  
but it is in a static system  
in relation to a person

and then it turns out that the future  
as a structure of Thinking  
which contains information

and the current as an element of real time  
then here is the docking of the future and the current time  
this is a constant diagnostics of the object

i.e. at a certain level  
a person has diagnostics all the time  
of the entire external system

where in the future it is an element of the relationship  
man relates to man

Well For example there God relates to man

and here we basically have  
in fact, this type of management  
what if when God relates to man  
and for example interacts  
this is not quite an element base, yes management  
as if at the same time a universal control base

and therefore it turns out to be in the general management base  
we can, for example, if we do it here  
verbal plan , so to speak  
here we are building the word yes we are building at the same time

we can do it so that the verbal plan  
it may not be implemented  
for example, in the form of a specific word there in full  
we can shorten the word  
for example, remove from the word  
some letters sounds or speed up the action of a word

you can just say the word in the usual way  
but at the same time accelerate due to Thinking

and when these actions manifest themselves  
i.e. we begin to see  
we are cutting for some reason  
structure of verbal control yes

for some reason we want to show the word  
in a faster version

i.e. on the Spiritual level we show the word  
but we may not pronounce it fully  
Well there it is abbreviated as students sometimes write  
you can write it there in short

not necessarily a student <sup>yes</sup> schoolboy any person

i.e. it turns out that there is a multiple meaning

invest

who shortens <sup>yes</sup>

<sup>well</sup> three categories

student schoolboy <sup>there</sup> any person

or maybe another employee, etc.

i.e. abbreviation of the word

and immediately a lot of information

and how to get ahead of the event

how to make an event more accessible

there to manage everything

in the eternal context of management

for this you need your elemental

i.e. the level of basic management

it can't be clearly recorded

on a specific word

the first way to do this is to shorten the word

maybe there is a removal of the letter sound

If

however, this may not specifically be a seizure

and muffling the sound

in some more urgent cases

this withdrawal can be said in full word

but to remove, <sup>for example,</sup> the mental structure of sound

you can mentally extract the structure of the letter

and if you always remove from the word

one letter after another

while saying the word <sup>yes</sup>

i.e. speaking but at the same time taking

and this information matrix, <sup>so to speak</sup>

from here <sup>well</sup> from this area of management

take and confiscate everything

then you get a secondary word

the same but on information

i.e. firstly in the word the first word

it itself exists as information

if the same sign is the same as you do  
in relation to the objects of physical Reality  
you apply here

then the removal of this informative component of the word

it turns out that you take and actually crush  
the information itself on the element base  
and you can break it down quite simply

i.e. here is some word in front of you  
there for example there is a "video camera" yes word  
you take the next one there may be a "video recording"  
close in meaning yes it's already a different word  
but there is for example there is some kind of general "video"

if you consider the word "man"  
then you see one area of information

here man is a unifying system in management  
it turns out that in relation to a person  
you can make a diagnosis

For example there are video recordings or video cameras  
any other phenomenon at all yes

and it turns out that the selection  
at the information level of the element base  
leads to a person  
in precision control  
i.e. you see the structure of a person

God does the same  
any level of increase of the World  
there at the elemental level  
there is the emergence of new elements of the World  
this is the way to God

and it turns out that if we start  
do management this way  
for example we have structures emerging there  
which simply require external management

those. Well at the normal management level  
a person does some actions there  
some events are held in the usual manner yes

for example, if we use as a control element  
let's take some universal level  
and let's say that through this level  
we can take and do the management  
and no problem  
i.e. to take external control, as it were  
in relation to oneself  
or to another person

Well For example there Well some person does not want to be treated  
and he is at the nuclear power plant and a lot depends on him  
it needs to be cured in any case, for example

then in these cases it is natural  
not only in these cases  
any person can have the opportunity and has the right  
cure anyone else

the main thing there is the possibility of the Soul of another person  
perceive this information as if not rejecting it  
and that's all

and it turns out that if  
Well for example, the other person does not reject in any way  
i.e. he agrees in an implicit yes level  
and you need to take and do it  
so that he would be completely healthy there  
it's just that things worked out optimally for him  
for example, if he is already healthy

and you do external management  
actually just for him

For example Well how is it perceived from the outside  
as if you were entering into control  
and everything happens in such a way that this is how you set it up  
Well and you put for example there is his eternal development  
his Into eternal life

but by and large, in essence, in reality  
a person accepts all this, he must accept it

i.e. your action should not be excellent  
from what is actually inherent in a person  
in his destiny as he sees it

only in this case does the information connect

and it is actually developing  
well due to external control it is obtained

such specific external control  
which stands out  
how exactly is the control specific

i.e. you have laid down the control  
he might be there well does nothing yes  
another person or does not want to do  
you do it for him  
and all this happens so that he participates in management  
everything is going well for him  
and this creates a kind of feeling  
that you can take it completely simply  
external control over oneself yes

and instead of those signs that exist  
well in some kind of automatic way or something in yes mode  
any person  
when he does some actions  
which seem to exist by themselves  
he doesn't think about it

it turns out that there is such a level  
that you can take absolutely all control upon yourself  
but it is precisely the elementality that should be highlighted  
i.e. some period

then it is clear that in this period  
you have carried out the management  
but in the Infinite development in the Infinite development  
after all, the structure of this external management  
is a must  
into the structure of collective Awareness of all people

and then if one person doesn't do it  
i.e. it does not mean that it determines its events only in management  
then you are still at some level  
you will go out  
even at the level of physical actions there  
in that you start to kind of connect  
at the action level  
at the level even the location of the controls there according to the words  
with what one person is doing there  
who doesn't do this

and it turns out that we can do it  
elemental some action for some time  
but under certain conditions  
if in collective Consciousness there is  
element where this is not done  
then this element after some time  
maybe well the same level of management

i.e. all elements are equal

then it turns out that you well committing  
there is some external control there  
in relation to the control object  
you still lead to that

so that the management is stable  
we need some kind of educational informative level  
bring out the structure of the perception of that individual person  
which for example at the moment  
well in fact, he may not be very responsive to control

then it turns out that the transfer of this control  
on a specific person  
this is still a more local action

i.e. you owe a specific person  
do something like that , actually ? Well or what? target management  
so that it would get through to him  
if there is a healing impulse there yes  
for example, a healing impulse  
you have to bring it into the structure  
there may be completely arbitrary actions  
another person

i.e. he can behave completely differently there  
you took there brought the healing impulse  
and then his reaction is already arbitrary  
to this impulse  
it can be different yes

For example people can feel something there  
someone may not feel anything  
but nevertheless in some cases  
this is the mandatory bringing of management to implementation

and here is the way a person reacts  
to the healing impulse  
for some action

this is already his personal will, yes For example

because God always gives the structure of personal will

that's when he takes and saves a person  
and where then is the personal will of a person

here personal will is manifested  
in his next act  
in response to God's impulse

i.e. he can, for example, then already as if  
Well somehow perceive this level emotionally  
or something different there, yes

this is exactly his reaction in terms of action  
is equivalent to that

what was the action for example Salvation  
in relation to him

i.e. everything that concerns the system of Macro-Creativity  
in this case, there is such a perspective in management  
what again well it looks a bit arbitrary  
that all actions are equal

that's what happens after Salvation  
the action of reaction is equal to the action of Salvation  
as if the person himself did it yes  
i.e. would accept

so there is a way when  
if the Soul of a person doesn't know very well there  
or you need to take control out there  
to the level of some kind of macro- formation  
in terms of obtaining education and knowledge

it turns out that there is a lot here  
actually, such a simple way of management  
according to elemental systems  
where there is already a basic level of management  
is being created  
on the continuous basis of the development of the Soul

i.e. the spread of the Soul  
into the structure of the following events

For example there is a person who needs to be treated there

what he didn't know about <sup>yes</sup> that there are problems there  
<sup>well</sup> naturally there is no need to talk but to do management  
i.e. to make a standardization  
so that he could be better and not know  
there was some kind of problem there, <sup>yes</sup> in the future

i.e. I have not encountered this problem anywhere  
i.e. as a matter of fact, this is <sup>like</sup> a fact of instant healing

but if <sup>for example</sup> he doesn't know  
then it turns out that in the future he won't know  
you went and did the healing  
then where is the fact of his free will then

and here the factor of free will lies in the fact that  
that the level of that is equalized  
what <sup>well</sup> maybe he remembers there  
that somewhere he needed help, not necessarily for health reasons

then this level is what it is somewhere earlier  
maybe <sup>well</sup> even in the process of learning  
somewhere help could <sup>for example</sup> <sup>well</sup> as if to ask <sup>yes</sup> it turns out  
or there was a mood to help to receive help

then we can have this management structure  
his earlier mood  
to deduce as the structure of his system of actions now

i.e. find in information  
where did he want help  
take from here a universal, <sup>so to speak</sup>, basic module like this  
that it's just a request for help, what kind of help doesn't matter

and through this conduct management  
into his, <sup>as it were</sup>, internal system for his Salvation

then he is in this system  
has more opportunities to interact  
on the acceptance of the system or not

but when the system is closer  
she's already saving him

for <sup>example</sup>, God saves in any case

It just turns out that he's building up

from the point of view of this technology  
constantly increasing access channels  
and all the time increases concentration  
it is the technology of favorable events there

when a person turns to prayer  
he just opens up this space  
and then this space  
can be filled more quickly  
the space of Salvation so to speak

in this case when we use  
Well as if some kind of pseudo-construction  
i.e. a person, for example, does not ask for help  
because he doesn't know that she needs help , for example  
or he doesn't have time yes

then it turns out that we are increasing  
we just find all the element bases  
where once for some reason  
needed help  
and we use these channels  
to enter information and save a specific person  
and then the element of personal freedom  
this is an element of his personal choice

here is an element of his personal choice  
this is how he is in the future  
will accept this Salvation and use it as knowledge  
i.e. will start to distribute them, for example

or here well seems to work more  
the element that he won't be there, well how to distribute  
Let's say it so clearly  
but will act depending on this knowledge

but then he still seems to spread them through his behavior  
it turns out

and one way or another the system here are his actions  
i.e. the system of his consent is as follows  
what we actually have here  
like this level of management  
that when he begins to spread knowledge man  
then in principle we have basically the same thing  
as if that elemental base which he himself has in front of him  
sees there

for example we can say  
that a person who, for example, disseminates knowledge  
he builds the structure of future events for himself yes

and based on this, if he already these events  
develops, actually, calmly  
it turns out that he actually agrees with it  
that earlier events occurred

and this means that in principle  
since earlier events occurred  
he agrees with this there on a number of what he chooses  
an already constructed section of event space  
for myself

then he well in general you can say  
that built the management structure  
there I built a structure of events  
and in fact it turns out that he agreed  
as with the structure of previous events

i.e. transferred the management structure yes  
at the elemental level into the future  
and so he actually built that future for himself

which is absolutely clear  
at the information level it can be modified

since it is at the control point  
where he agreed with the preceding event  
even if it exists well external control action yes

and at the same time he believes that this is acceptable in the future

i.e. it turns out that he acts quite flexibly  
this particular person

it is precisely in the Eternal development  
this is the combined effect of the experience of all  
collective overcoming of some situation

or is it each person individually?  
if overcomes the situation  
then this knowledge  
if every person takes immediately  
uses them for example as a system of action

then he actually works on collective experience

and already here the structure of creation for example Souls of man

For example there is action

from the point of view of the creation of the human Soul

not just some action there, for example

Well as if it were normal control

but it is precisely this, as it were, that more M acro-creation

then here we see the Action of God

where there is precisely a general context of absolute action

and in this general context it is visible

how exactly is the element of creation

Souls of man

Well as an elemental level yes

it already acts as an Infinite level

i.e. it is precisely in the structure of the creation of the human Soul

each element is an infinite system

and thus we see that that element

which comes from the level of the human Soul

this is an element of the Infinite sense and as if properties

i.e. in this way we have brought

control to Infinite level

when we looked at a person's personal action

action towards him

and saw what exactly is in the structure of the Soul

we see precisely Infinity

based on that

that the element of action is itself Infinite

because the Soul is built from Infinite systems

therefore, it turns out to be an element of action

is equivalent to the action itself, i.e. to the event

and with all this

and event

and the element of action

this is the Infinite System

then it turns out that we can do it quite well

Well in general, to align the management

Well essentially any kind

in the structure of the human Soul

if we see where exactly some kind of docking occurs  
action element for example Yes  
and the element of the human Soul

because the Soul of a person is already the person himself  
this is already acceptance well in general, human actions are obtained  
i.e. a person took some action independently

and it turns out that since he accepted  
some action on its own  
then in principle if we start to consider  
as for the element of creation of the Soul of man  
we see the primary parameters

i.e. we see that a person, for example, reacts there  
on your own Soul as a structure created by yes  
this already means that a person exists

and if we consider the action coming to a person  
then it turns out that this is the Action of God

and here is the docking of the action of the Soul  
i.e. the elemental action is obtained by the Soul of a person  
and actions to create the Soul  
this is exactly that level  
where all the elemental bases actually come together  
and something like this arises Well in general Macro management so to speak Yes

where the element is Infinity  
and on the Spiritual level this can be perceived

that any element is an infinite quantity  
and this is Spiritual knowledge precisely according to Eternal development

then it turns out that you can do the management quite well  
by self-construction actually yes  
due to only Spiritual knowledge  
There is no spiritual aspiration even

Spiritual aspiration  
this is a guarantee of your eternal development  
your Eternal life  
at this level

just one element is enough  
translate to Infinite Sphere

This is where I end today's seminar.

Thank you very much for your attention
