

GRIGORY GRABOVOY  
The Teaching about God  
**Development of Controlling Clairvoyance  
by the action of the Soul**  
17.10.2005

Hello again  
the topic of my seminar today  
This is my Teaching about God  
Development of the controlling clairvoyance of the action of the Soul

in this topic i show  
how to the concept of "management of the Soul"  
it is necessary to introduce another concept such as "development"

because when we talk about management  
from the level of the Soul  
then there is almost complete static events there

i.e. there are forecasting systems there  
which are already defined initially  
and the management consists  
in the interaction of the Soul  
with the Action of God

therefore the concept of "development" in this case  
this is the development of events as such  
where the Soul interacts with God  
defines an event as being of better quality

and the concept of "development" is already the development of events

so in this context  
management when we proceed from the action of the Soul  
and we set development as a system of investigation  
not as a system of the internal level of the Soul

in this case it turns out that then we should  
to reveal some context of events  
which is beyond the level of action of the Soul

i.e. to outline a certain boundary area  
and carry out an action related to that  
what exactly is happening component of development

i.e. the most important thing here is to identify the structure of development

and the structure of development is the influence on information

therefore the main level of management  
here it is precisely to influence information

and influence at the required level of management  
this is what the development structure turns out to be

i.e. it turns out that the influence itself is development

just like God does

For him, impulse and development are one and the same thing

if we consider for example

how does God act on events in general  
from the point of view of your personal Soul  
then it turns out that He has an event level  
he is both maximally distant and maximally close

and the event itself seems to grow  
within His system of perception

God has no external observer  
on the merits  
there is only a structure of external control  
or Perception of some event  
and then in the transformation of each element  
where is the Action of God in any case

and here is complete freedom of action  
a person can also see any event for example  
in the development of predictive capabilities

and at the same time he can see as much as he needs

it turns out that God's point of view is closer  
He sees as much as he needs to.  
but he just makes an event yes

and now if we start  
increase this component  
it is precisely the development of some element  
into the event structure  
this is that element

where the event is already located for example  
in some concentrated form  
and at the same time we achieve this event

i.e. for God this is an obvious point of view

from the point of view of already investigative Perception

for example, a person perceives the following event  
as an event that is, as it were, beyond a certain horizon

i.e. it moves in the direction of the event  
performs some actions  
has some technology  
but the event as such is always as if further away  
until it is reached in time or place

and it turns out that here  
this is precisely the ability, so to speak, to bring the horizon closer yes  
in management, so to speak, in quotation marks

skill sometimes in essence it looks like this  
on management on information  
that there is indeed an approach of the horizon structure  
i.e. the spatial phase of event management  
is approaching

and here a very important point arises  
from the point of view of Perception of Reality in general

because if, for example, we consider that Reality is Infinite  
that means we can say, for example,  
that somewhere there is a point of view  
where we are looking at some kind of ending , yes  
first impulse of Perception

and then it turns out that we can  
bring this boundary system closer to you

i.e. if we found  
Some kind of endless system  
Infinite space  
we found a concentration of information

and then we can bring this system closer  
this is already a movement of the horizon as if in our direction yes

i.e. if for God this happens simultaneously  
then in a person it can happen like this  
that he first records the events  
as if capturing events  
and starts moving in his direction

and that's when he starts to push events forward  
Well for example, there is a traveler walking somewhere for a long time

it may not necessarily take long  
but he sees something unfamiliar  
the horizon seems unknown to him  
what will he meet with

and then it turns out that it would be clear to him  
what awaits him  
he should just take everything  
and bring the space closer to you in management

so this is the action of the Soul  
on the development of precisely controlling clairvoyance  
this is an approximation, an informative approximation  
status of some fixed events

so it turns out to be able to develop prognostics  
due to the action of the Soul  
It is also important to note here that, for example, due to the action of the Spirit  
this is a technology, it is basically different

it is built on structure  
namely dynamic moving objects  
on the structure of interaction of one object with another  
in management yes

Spirit is such a multifunctional action  
multidimensional system  
and the action of the Soul is specifically in this case  
completely linear action straight as if

Well, linear is not in the understanding of the narrowness of action there  
and that it is quite transparent  
there are no internal interactions there  
here in terms of the fact that the Spirit as an element is multi-vector  
constantly has the property of interchange  
between information substances  
at the moment of action

when the action of the Soul occurs  
it's like an action, almost simple  
well, like one monolithic level of light  
a ray of light  
but not in terms of the beam itself  
in terms of the fact that the Soul itself changes the management structure

for example, when there is a cure for some complex disease  
contact is enough  
Souls  
with event prediction function

healing occurs

while for example Spirit healing  
it is both  
and the content of the object  
for example, there may be control and information  
not even the person himself  
inside the Spiritual substance

and at the same time action

i.e. it turns out like this  
all the time there is some extra weight to the event  
increases yes in the Spiritual Administration

and Soul management is specifically targeted management  
which does not increase well some feeling  
or there is a weight quality of events

here we need to take into account  
what is the optics of the Spirit  
this Spirit has some kind of silvery light of control  
i.e. such a fairly well let's say white light

That's why I don't specifically touch on these issues here  
management is concentrated there  
at the level of the Spirit's action  
because Spiritual action can be recognized  
in action Souls

and the action of the Soul  
carries information of Spiritual action  
so it turns out that it is still a Spiritual action  
this is an investigative system

and we have the opportunity in statics  
determine the structure of the Spirit  
this is what's beyond the horizon  
there is Spiritual action  
at the level of seemingly unknowable quantities yes  
in one element of Perception

and so as not to complicate things  
this control structure  
you can just bring the horizon closer to you  
in management do it this way  
what we perceive Spiritual action  
somewhere in the Infinite Future

and the action of the Soul  
this is a present tense action

i.e. if, for example, we set ourselves the goal of determining there  
where in the space of information can be perceived  
for example present tense  
where is this information located

then in principle it is quite clearly visible here  
that the structure of the action is precisely the Soul of man  
this is an extension of the present tense  
i.e. action from the present

because in the long term  
for example God He acts from the present  
in all elements of time  
from a human point of view

from God's point of view  
He just did the Action  
and all this once

so it turns out that if we consider  
it is the spread of development of the present time  
as a kind of wave of action

then it turns out to be very clearly visible  
these are the boundary systems  
where it is absolutely clear  
what exactly is the development of prognostics  
this is some kind of detailing  
between the wave there let's say information

corresponding to the Soul of a person

and at the same time the structure of information transfer  
element of Consciousness of a person for example  
where such a kind of inferential principle occurs  
that the Soul first perceives information  
and then passes it on to another system  
or the structure of a person's personality

the most important thing is that there is no transmission  
inside the substance of the Soul  
i.e. here we need to monitor very clearly  
what is inside the Soul of a person inside this optics  
exactly the one that corresponds to the Soul of a person  
no information transfer occurs  
between adjacent event elements

then we begin to see very clearly  
that development occurs due to the action of the Soul

i.e. the Soul as a kind of unique, well, it looks like this  
as a system that kind of pushes out  
other information in the development phase

i.e. well, some kind of substrate, let's say  
where exactly the pressure element is present

i.e. it is very important to see here  
that the Soul carries out precisely the action on optics  
then it's exactly that optics  
which is called "development" in the long term

i.e. initially it is a neutral system  
and then, with the action of the Soul, development occurs  
i.e. development occurs from the action of the Soul  
somewhere in the Infinite Future

it turns out that the main signal in the development system  
specifically in predictive systems  
this is a signal that comes from the Infinite processes

i.e. we must allocate in any system  
level is a certain space that characterizes  
the fact that here are precisely the processes of the Infinite

and then you get the prognosis itself

it already acquires a specific target character there

and if we look at the structure of the Soul's action  
then here it is clear that the Soul, in principle, acts often  
through very well in general, relatively long periods of time

those. possible action of the Soul  
do it for example by means of management yes  
due to the control logic once  
and this can last for a very long time

and it turns out that this is an element of development  
between action elements  
This is precisely a person's personal choice  
why does he look at some time, for example, with his Soul  
i.e. why does he perceive events simply with his Soul  
there by the vision of the Soul for example

because the vision of the Soul has the property  
direct perception

i.e. there are no elements of modification of events  
there all the information comes directly here

and there is such a principle as there  
well, let's say there is a naked level of the Soul  
i.e. direct Perception of the Soul  
and then it turns out more like this  
sensitive perception for a person

it's one thing when there is some kind of prism of Consciousness

and he immediately perceived the other matter with his Soul  
i.e. directly

then it turns out that development itself  
this is the ability to mean to save  
namely the structure of the Soul  
in the primary state  
as if before the action

for with God the element of Action is always equal to that element  
which existed before the Action  
For Him it doesn't matter at all

so it turns out that if we consider  
how then does God realize events

there perceiving the structure

then he generally speaking any event  
develops simply as a Personality  
it is precisely that Personality that strives there  
precisely to the Eternal development  
and it will be accomplished simply by knowing this  
and for everyone

so when we start  
here is this element to consider  
then taking into account that before the event and after the event  
God has basically the same level of Perception of Action

then for a person it is precisely development in the prognostic phase  
it is the ability to highlight detail  
where each event element  
begins to be perceived  
as the Soul of a man  
for example, there is his physical body  
and at the same time he has the right and the opportunity there  
well at certain levels  
participate in an event structure

some level of management yes

i.e. consider your level of safety of action there  
level of detail of the action  
the level of specific events there

when this complex is fully implemented  
then a person begins to see the structure of events  
precisely at the prognostic level

i.e. Soul is this level which  
it turns out that he already perceives  
the action of the developed Consciousness there  
towards the recognition of the event  
towards there event management

if it exists there  
simple practical example  
there, for example, take and consider  
there tomorrow or there a week ahead  
maybe 100 years ahead

and view

what does a person need to do there  
to be able to develop  
so let's say our predictive system  
so that he could optimally manage the situation there

after all, it's not just about that  
just to look at the situation there to understand yes  
but in general it's about being able to  
it is precisely to harmoniously put together an event

but when is the event  
Well, that's exactly what the management task is  
as a task of precisely such, so to speak, favorable for all  
harmonious level  
harmonic level of event definition

then it turns out that the fact that is very important is  
that harmony is an internal impulse of a person  
it is at this moment that he, for example, determines  
as the level of the very fact that everything will be harmonious

i.e. it is still a person's internal perception, yes  
first of all

i.e. that there is harmony there at a specific level  
it is clear that this is some kind of minimum norm in any case

i.e. the person must be practically healthy there  
he must have some favorable events  
from the point of view of the generally accepted Norm

but how beneficial is it for him there really?  
i.e. that's how he solves his problems  
exactly fundamental yes  
development of life in this World  
there from the point of view of there Infinite development  
from the point of view of the personality as such

because Infinite development  
for God this is generally not a problem  
and for a person it turns out the same by the way

that's why a person, for example,  
Eternal development does not perceive it as something like that  
there well let's assume the unattainable yes to a certain extent  
so it seems like it might be difficult  
but that this cannot be achieved, for example

A person basically has this element of knowledge  
it is practically not implemented

i.e. a person is usually very clearly aimed  
precisely on Eternal development  
each of his actions is connected with the structure of Eternity  
in a moral sense, as a rule,

and it turns out that this is exactly what it is  
from God man has in his actions  
the fact that he practically perceives Eternity  
as an element already given to him  
at a certain level of Perception

and then it turns out we are already considering  
development towards the Soul of man  
towards the organization of even the Soul  
that's in terms of the investigative organization there  
not primary but investigative  
when the Soul is developed

and to that level  
where the Soul interacts with the body  
here is a very important point  
where the Soul actually creates the body

i.e. the reverse level towards the Soul of a person  
this is the level where the Soul creates the body  
i.e. this is by the way the most powerful element of human healing

if we start to do  
namely the development of prognostics  
then the reverse wave is a wave of fairly strong recovery  
as a rule, and generally speaking, almost always  
if you pay attention to it

if you don't pay attention  
then this wave of recovery still exists  
because in forecasting you need all the time  
somewhere let's say have a certain resource under management  
to follow further

i.e. the meaning of management is this  
what is here at the level of logic  
systems must be implemented  
as if the next element of development

after all, we are talking about the fact that there is a target task here  
to get exactly the development that would allow  
to influence the situation optimally

this means control over the situation  
this means the ability is precisely the term of development  
to use due to optics precisely the Soul of a person

and so here is the details of the events  
this is an event containing as if  
its own microstructure  
in this World in terms of development

i.e. any event has  
some property, let's say Well, preliminary systems or something  
here is the output of the information

here if we consider the field of events  
like some kind of neutral event  
then each element of such an event  
has a personal context

i.e. the external system of space for example Yes  
means it has the same structure  
that the action of the individual

for example, the Personality of God is manifested in any system

so if we look at space  
then we can gain knowledge about the Personality of God  
at the moment of your viewing

i.e. about what your condition is  
in the Infinite level of Perception  
in Infinity

these are the states of Infinity  
it's very super fast  
the level of development of your capabilities abilities  
precisely in this kind of synthesizing way  
exactly well as if at a forecast-oriented level

i.e. the environment that interacts with you  
at the level of logic elements  
at the level of elements, for example, the following development  
it becomes controllable in real time

at the level of just your gaze and viewing

i.e. a certain dome opens  
personal characteristic of space-time  
increases

you begin to see the actual Personality of God  
but essentially his own personality  
manifested precisely at this point  
and how exactly the Eternal element of this World

when you start seeing this element  
some kind of dome, like a control, opens  
and you begin to perceive  
what is already happening specifically  
at the level that you have carried out primary management

i.e. what I showed is very important here  
that we first bring to the management level  
we take control of the situation  
only then do we begin to see and output  
Well, exactly this kind of visual part of the events, yes For example

i.e. in this case, in this technology you can learn  
precisely to visualize events as they look  
just there in physical Reality  
for example, people passing by at home, etc.

and when you start to see the event structure  
this is where the question arises  
how to provide assistance and further

here is assistance  
this is a special technology  
it can be very special

related to universal control technology

but in this particular technology  
it means due to the development of the manager  
it is precisely this kind of actually predictive clairvoyance

in this topic here it turns out  
what we must clearly understand  
that every impulse  
coming from the system that is developing  
it is an impulse which is actually

Well, well as if a consequence of the signal coming yes  
from some kind of information object  
fields there are information from external systems

and development towards management  
this is the ability to hold  
some such constant Norma  
in conditions of working with information

here from God's point of view  
His processes are all quite stationary in this regard  
this means that God's Perception is like that, for example  
that he just tries to keep the norm basically  
Here

and it turns out that since he tries to Norma all the time  
This Norm is contained somewhere  
in His understanding

that means from the point of view of a person  
this is the Norm of Interaction  
events yes  
and let's say the element of human perception

i.e. in this regard it is enough for a person  
develop predictive management to the level  
when events come together  
with the element of Perception  
at the right point  
and have the desired shape

i.e. we get the event we need  
due to the fact that we are holding back  
as if its own wave of interaction

i.e. the simplest option could be  
This skill means its own area of control  
means not to get involved

in contact with negative information

then development means precisely in the direction of prognostics  
consists in seeing  
visualize  
and where is the information that you don't need

it may even be good information

i.e. it is not harmful to health, for example , yes  
and for anyone at all  
but you need to, for example, not deal with this information

for example, you want to do something else there  
then it turns out that the ability to sort of collapse information  
ability means not to implement  
some unnecessary interaction  
this is still an accurate vision of events, yes  
you must then move to the physical plane of vision

i.e. if you want for example on a physical level  
some object of information to bypass  
you must first see it, for example with your physical sight  
if we are talking about a specific object then

There are also information systems  
which talk about that  
that a person can react to a situation in this way  
that he can just react to information  
and due to this it already works optimally

i.e. we are still talking about the general spectrum  
and about the physical level of Perception  
what is happening in physical Reality

and about the Spiritual informative moral level  
i.e. what a person perceives as information yes

and that's when we start interacting  
at the informational and physical level  
we see that in this case we are at a certain level  
precisely in the Infinite Plan of Development  
or there in the rapid development plan  
we already see the physical level

so that's what happens when we look at it  
it is the pricelessness of the human physical body  
then we get there  
in the structure of the Management Standards

i.e. it is precisely the uniqueness that is the focus there  
and in general the Reality of that  
that a person has the opportunity  
An infinite number of years to live  
this is the structure when we consider

in the form of, that is, a defining quantity  
for development

i.e. what should human development strive for in general?  
according to logic

from the point of view of life, development should strive for that  
so that life is endless

if we are considering then some event  
where a person is involved  
Well, in the context there might even be some goals there  
which can be realized there  
and then a person can set other goals yes

then here is precisely the desire towards life  
this is already the development of the human Soul  
towards the person himself  
towards there event management  
towards something more harmonious  
let's say the level of Perception of the external world  
from the side of the Soul

and here such an element arises  
what from the point of view of the human Soul  
there is a practically quite clearly expressed  
interaction system  
where inside the structure of the Soul  
this means that there are very clear social lines of control

i.e. the Soul is not only there, it means the level of information  
not only the level of personality that determines  
some kind of ideological or something more Norm yes  
or criterial

in fact the Soul is the same  
and specific technologies of Salvation  
of some specific actions

and for example, here is, let's say, a practical example  
from level well let's say there are possible examples yes  
what if a person is driving there at high speed  
Well, let's say in another person's car  
who needs help yes

without breaking the traffic rules there

then here comes the question  
so that he wouldn't be stopped by the police, for example  
he needs to clearly work out  
internal resource of assistance and assistance provision

then for example in large cases  
there is police or never at all  
if he concentrates the structure of assistance correctly  
she won't stop then

here it is as if a person is driving through a structure  
well, some of those information systems  
where things don't go your way there's a stop

and here it turns out  
element of development towards assistance  
there to another person  
to all people  
this is the element that allows people  
practically means well quite actively  
pass information to each other

and at the same time have a helping factor  
there is mutual development  
there is mutual assistance  
next development  
next help etc.

and from this point of view, if you think about the context there  
and where does God have the concept of "help" for example ?

because God practically succeeds  
what if in terms of help  
then yes, if so, you can understand this for yourself  
help  
you can help if you follow  
It is His ideas of Action  
there directed to Infinity

i.e. the concept of "help" is a correspondence to ideas  
it turns out Eternal development  
for God

if a person there is directed in this direction of development  
then it turns out that it helps faster or something  
implement this task  
for God and for myself

it turns out that it is precisely Eternal Development  
the structure of Eternal development allows us to see  
those components additionally  
which correspond  
namely the process of development of prognostics  
due to the action of the Soul

where is the element of mutual aid  
revealed  
to a level that allows, *as it were*, to implement  
the next element of Reality  
due to the fact that there is mutual assistance

because there is *simply* an element of Reality  
which is not connected in any way with the personality of a person, *for example*  
Yes  
in a direct *or something like* a quick understanding

and it turns out that if we consider  
mutual aid process  
these are specifically identified information structures

and it turns out that the main element of development  
at the prognostic level  
is the presence of an external element  
and one that would characterize  
possible help to you *yes*

but in essence this is the information that you should see  
which is not just coming from somewhere, *but*  
and which is organized  
as a structure for your personal development  
according to the primary context of personality creation

as I said at some point  
can a person perceive with his Soul  
the whole outside world  
and he has enough there for many years  
so that it would be his light that leads  
into the structure of Eternity  
*we will say* in detail through some specific actions

and if from God's point of view we consider this path  
then at some point  
The perception of God is no different  
from Human Perception

It also perceives the external system.  
as a system of certain elements of Reality

and it turns out that then it is easier to learn from God

if you look at how He acts  
at the level of physical processes there yes  
or management processes  
where there are specific values

then the development of the prognostic level is obtained  
this is a system of correspondence  
human actions  
By the action of God

and that means on some specific ones  
practical controls

and when we start to consider  
how do you mean you can get it here  
for example the effect is well let's say holographic there volumetric Perception  
the effect of understanding what will happen in the future

then it turns out that it is basically the management level  
is based on some transformation of the system of Perception  
where is the concept of , say, "development" the concept of "transformation"  
this is the value that in principle  
as if it has the meaning of experience  
which may not apply

but a person, for example , in the future may consider  
that this experience allowed him, for example, well, implement something  
as a potential experience  
which may not have even been used

then the next level of development  
predictive level of management  
This is a system where the whole range of issues is resolved  
but at the same time it is realized in Reality  
only one yes option

i.e. either it is multidimensional or linear  
cause and effect

it turns out that this is exactly the difference  
between the possibility of implementation there  
Well in general, a large number of any options

but the implementation is one  
this is a level  
which allows to develop predictive vision  
to the level of complete control over events  
what does that mean well, not only in a local sense  
but also in terms of the output of Macroregulation

to the level of global management processes there

and it turns out if you, for example, decided there specifically for yourself  
make management according to your personal tasks  
in this case you need to take a closer look first  
to those trends that already existed yes

i.e. in management precisely due to development  
we need to have some kind of reference point  
and development is still a system  
what can you compare  
with some earlier control element

there is another principle of development there  
when you are constantly taking in information  
but you don't fix it

i.e. you do the control but don't fix it  
in the form of some specific systems

so this is exactly the level of such transparency  
what kind of socialized development is this?  
when the control objective is known  
as for example a socialized goal  
i.e. it is not hidden in any special way

then there are all the attributes that correspond to the control  
then it turns out that in order for development to be Eternal  
we need to see Eternity all the time  
in the structure of all the same and including the external world  
in relation to the event

it turns out  
that this is the system of the external level of control  
that excludes the possibility there  
unfavorable development of events  
and in any case it excludes

this is the level where the systems are

entire development systems  
are organized in the form of specific management systems  
which correspond to some levels of the object

i.e. the knowledge that is obtained  
they are the ones that are universal in nature  
and here you can  
the material structure can be modified  
For example, some person might buy there  
Well, there is another area there for cultivating the soil

and with all this, here is the universal part  
he keeps the same

and it turns out that this is what it is, i.e. in Perception  
he gets the same impulse all the time  
there is Eternity for example

when we start to look at this  
control  
as a management that moves towards development  
exactly those qualities that relate specifically to prognostics

then it is clear that this is precisely the level of prognostication  
which is convenient enough to control yes  
and have further development  
according to the technologies of precisely this kind of direct control

here you can see what we see  
this is what this subtle prognostication is  
as a system of organization  
some information some space  
near an event near a person

i.e. if you think about it  
how is space organized in general  
in the prognostic phase

that means it's prognostication itself  
she is practically like that  
that you can see just events  
you can know events there and influence them  
Well how to take it into account in the future

and can it be from the current time  
there try to influence events  
then it turns out that everything depends only on the amount of work

how busy are you there or something  
or you have more time  
and you can simply influence events for example  
if there is a lot of time  
the events then turn out to be negative  
may not happen

that means, but that's another question  
that again is the subjectivity of opinion  
as for the positive level there, yes or negative

if there are many events

the person needs to make a decision urgently  
he then often simply makes a decision  
without thinking about it there  
in what way does it mean Well, this is mainly in a difficult situation  
how does it mean that the implementation is going on  
quite a lot means in the management of such systems

Well, in my Teaching it is quite clearly understood  
that any action goes through Macrosalvation  
through precisely the level of the universal there  
Macro-saving action

therefore, you need to work calmly at any level  
as if not leading to any forcing forces  
if possible yes

when we see for example  
what if let's say we set ourselves a goal  
still identify the object

one thing is control forecasting where everything changes yes  
It would seem that it is possible to do complete control there  
on change of information

but at the level of ordinary physical processes  
This is usually not necessary  
and this is what local control is  
some specific systems  
it is still a direct vision  
just as a person sees, for example, with physical vision

for example, there in the conditions of counter-terrorism  
It is very important to see intentions

there is another side yes  
how adequate are the intentions there?

well, the location of some person there  
or groups of people in some place

and when we start to analyze further  
there may be some weapons depots that are visible yes  
through the control vision

the only question is how Well, implement the management  
because it's just information  
if there is, for example, no level of special authority there  
she doesn't give much, yes

i.e. accurate information

this is an action from the authorities to implement  
that's exactly the power  
well, maybe of a managerial type, so to speak Yes  
not only this applies to the concept of "ordinary power" there  
although to a greater extent  
precisely to the usual system of levels of government there

here it is important to see that the detailing  
if it is for example counter-terrorism  
this means interaction with the authorities  
so that there would be no possible terrorism, etc.

Well, a person can do it himself  
do management  
so that the action is not brought to a certain level  
that's exactly what's problematic in the expression

it is important here to see events  
It is important to see what the consequences are  
in events there is in Macro level

those. any local event is still that event  
which is definitely desirable to see  
as an event that depends  
from all external and internal circumstances  
some phenomenon

it's not like it's some kind of insignificant thing there, for example  
then you need to pay less attention to him

in fact it may be so  
that it was this event that had the most radical impact  
for some situation

i.e. that's why here's the detailing  
i.e. identifying objects in action  
this is still the ability to somehow philosophically comprehend  
management task yes

skill means detailing in a management task  
Well actually some control systems  
which are generally quite standard, yes  
for some levels of task implementation

that's why here is already the first such axiom of management  
consists in the fact that  
where visualization is an axiomatic level  
is also  
what is the visual system of perception

in predictive management  
this is what you see as a consequence of the primary system  
i.e. there is always some initial level

and here is a basic level visualization  
this is what the other person does  
as an organizer for example Yes  
or it just happened spontaneously  
as if some kind of spontaneous action

i.e. the ability to consider  
organizing substance of management in social systems

when you start looking at it  
then it's already starting to take shape in front of you  
visualization of any object

then you need the main thing here  
very clearly bring this object into the Norm phase

this also applies to possible illness  
human  
when you treat or manage there  
there with cars when checking houses, etc.

i.e. the ability to obtain visualization  
means taking it out of the management level

like a certain spectrum that, for example, is not needed now, yes  
for example for public opinion there

and this visualization system is like this  
what is there to see visually  
an element that seems to work in the control system

i.e. here in this case if we consider  
such a management position  
that there are, for example, some control elements  
and at some point  
we have such a layer of management  
that something works, for example, it's better there, as it were yes, something worse

so from the point of view of universalism  
everything should work the same way  
there, regardless of a person's status, education, etc.  
including

so it turns out that this is the level of sameness or something  
this is the internal content of the object  
in this control space

i.e. the gaze can be different for different people  
and here is the very object that has  
the ability to accumulate information  
from the point of view of the concentration of information there  
from a person

because here it turns out that the subject itself  
he's nothing special there  
only when it comes into a person's field of vision  
He  
some kind of analytics is starting

and that's basically it  
if, for example, we make management in that aspect  
that we have a structure for example  
Well as if some tasks in management  
and these tasks are being implemented  
through some specific actions  
For example there are images that correspond to Reality

then it is precisely the identification of the image that is in addition to what  
has been said  
including, for example, a system of well-developed influence there  
maybe yes

although with free will there is influence  
we can say that it is not effective in any way  
nevertheless, we need to understand  
what exactly is the event visualization structure  
it is the absence of any impact at all  
on your part for example

and that's when this understanding comes  
then a person begins to see  
the internal structure of the building there for example yes there are plane  
machines

and the prognosis already consists of that  
what is a fixed plane  
is already recorded there, for example  
somehow or there means some element of the building  
or is there a different type of plane

we begin to see well as objects of management  
if you take these physical bodies, yes

so we start to see what's on the plane, for example  
if we assume we decided to look  
what level of management will there be  
how do you influence improve well like the movement of an airplane

then here it is clearly visible that there is a specific  
further on, as if some of the answers

i.e. it's one thing you came with a predictive vision  
to what you have determined  
some pretty large array of information

then you start this information  
well, actually bring it to the level of detail  
and here is the conclusion, this is quite a big introduction  
as if with your actions  
in relation to some volume of information

there or for example this is the external volume of fixation  
some [...]

Well let's assume Well, if we take some kind of information carrier  
and we record what is happening yes  
it turns out that when we are engaged in management  
we need to change events

not only there in the real system  
and in the system that also records information  
or recorded there earlier  
some negative information for example yes

i.e. it turns out that we need to be able to  
manage any system  
regardless of the status of positivism , yes  
or is there negativity there from the start

and we must always bring it to the Norm

and it turns out that if Norma  
well, as some absolute value  
saying that everything is fine

then it turns out that this is precisely the conclusion  
management forecasting  
well what does it mean let's say direct vision Spiritual vision

here is the reduction of this level to the level of implementation  
shows that in addition  
that some specific systems  
are realized in action in management

we can see that there is more  
external aspect external attributes of action  
which is characterized  
as if by the presence of such an external space

if you pay attention  
for example, what about the person who is there  
well, in the conditions of interaction, so to speak, with someone  
at the level of there Macroinformation

then this is exactly the external system, it is like this  
that he gradually  
if there is one person interacting with it  
Well, she starts communicating with him more.  
and then the number of events decreases  
so those walking towards the person  
he is more busy there reading books for example yes and so on.

when we start to analyze  
Here are the cases when a person can  
there you can lead a quiet life, yes

in what cases is it necessary to react clearly and immediately

then here it turns out  
what exactly is the system of personal choice  
as I have already explained  
this is the level that allows people in general  
practically well it means to behave quite independently  
there it is free, really being free people

so they can choose  
in general, there is a fairly large amount of accumulated knowledge, for example Yes  
on Eternal Development

and here the element is already visualization  
i.e. the element that leads to that  
that we begin to see events in full  
this is the level of not only social understanding  
or some kind of philosophical fact  
or there is event analysis  
or there is a factual yes

namely the level that brings  
as if an investigative integrated level  
these concepts there

and it turns out that if we start  
let's assume to consider  
what exactly is going on  
with a specific person or with you personally

so after some time there and in the forecast  
at least there for a long time ahead any

here we need to be very clear about the social aspect  
aspect of the presence of all external information  
take as an aspect already known

i.e. it looks formally like this  
you seem to perceive quickly  
everything that corresponds to some level of prognostication  
as if with a quick predictive movement  
Souls exactly  
perceive the structure of the Soul

and then you have an impact on the information

because you know the information  
here is the most positive status

and here is the development of predictive management  
it's the ability to create that image  
which precisely characterizes the Norm  
in general in events

i.e. it turns out that this is the ability to influence  
as needed for management  
and not like that, for example, I like it more there, yes let's assume

if it is more efficient for management  
so accordingly you might like it more there

and when you start to implement this management  
and receive very specific knowledge systems  
here is the future  
how to behave

Now you are already achieving your goal  
according to precisely controlled prognostics  
due to the structure of the Soul's action

and by the way the mechanism of action of the Soul  
it's quite simple  
here, unlike any other mechanisms  
there are no logistic models  
or there, for example, the actions of the Spirit of man

this is exactly the action of the Soul  
it's a very clear simple mechanism  
and this seminar allows you to see  
structure in humans

i.e. firstly, there is information around you

near the manager for example  
and any information  
concerning, for example, that level  
that a person looks somewhere and sees some system of events

so here we need to see very clearly in this situation  
that the main purpose of this management  
it's definitely looking on the bright side  
the situation has already changed  
i.e. more favorably located

if it needs to be improved  
then further control is introduced  
but it is precisely the task of developing predictive systems

Of course this is an accurate vision of events  
and absolutely precise if necessary  
right down to the cellular level, for example , etc.

that's why you need to practice  
applying fundamental knowledge  
in order to get just a specific result

i.e. the knowledge itself is just like an external orientation, yes  
external structure  
when you are in management  
what is around you  
so that you can work more precisely  
and that's all

and precision is achieved by  
that you just need to look to the future there  
and practice all the time

listened to the lecture, set the task, checked yes  
listened, set a task and implemented it, etc.

this is the criterion of controllability  
here is the given of the production part  
which I just mentioned

This is where I end today's seminar.

Thank you very much for your attention
