

GRIGORY GRABOVOY
The Teaching about God
Expansion of Consciousness
in the field of sustainable management
27.08.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Expanding Consciousness into Sustainable Management

in this topic i show
how to distribute ^{actually}
control of your Consciousness
to the level of conventional systems
what a person perceives daily
and in general this also applies
to the level of control through Consciousness

and complement this management
exit to the control area

i.e. if, for example, you think about it
how a person in general perceives Reality
where there is a common action, ^{as if it were} everyday, it is considered
but it also belongs to the category of management after all

i.e. he makes a decision
at the level of some physical parameters
that which relates to the actions of physical Reality

but there is also a level of direct control
what are you doing
in the structure ^{for example there is} remote treatment
remote control
accurate information taking

and here it turns out that it exists
just right in the optics
expressed control region

by the way it's not necessarily just optics
it often happens that the place is just
control place near the human body

as a rule, the main place where there is an exit

exactly in the control area

It stays very stable at about the same level

in the same place for every person

there is a situation when this place of control changes

depending there

from the task

goals

from the control time

and that's why in today's seminar I'm showing

how to go to direct control area

and make direct control absolutely precise

i.e. to know the future exactly

what aspects of events occur in the future

be able to influence the system

due to the expansion of the phase of Consciousness

into this structure

i.e. well, in fact it looks like this

what we manage

concentrating the place of control

which corresponds to the usual actions of a person

we are bringing the control into the control area

i.e. the area of management is more of a controlling order

above all events

and it includes control from this area

for example, for your personal fortune

control over external Reality, etc.

i.e. the ability to perceive in Consciousness

completely different aspects of Reality

for example, you need to diagnose a building, yes

in which the seminar is read

then this is some specific area of management

I can, for example, keep this system under control

a little further away in space

while working with Macrocontrol

i.e. with the whole globe

and at the same time, well, there, reading a lecture, yes

i.e. it turns out that this is exactly it
performing some ordinary actions that are common to all people
control systems

i.e. like a household level when a person does something

can thus be implemented
all external control management
control system so
that a person doing any work
means that it can be periodic or constant
is in the control area

and if, for example, from the point of view of practical issues
It is very important to note here
that being in the control area
accordingly increases the control result

in practice it means mine personally
like if students work according to my Teaching
as a rule, the question is only about the time of management

i.e. if a person controls for a long time
some one object, well, one task, so to speak
behind the control object
then the results are higher accordingly

i.e. in fact, if there is enough time
then you can achieve the result in any control object

therefore in this control system
It is important to do the management like this
so that control would pass over time
as if into the everyday sphere
this is the expanded phase of Consciousness
would become a normal phase

i.e. that a person exercises control, for example
and reaches it
for example, well, or he heals himself there
or he is treating someone else
or he is there saving the nuclear power plant, etc.

that would be a natural state
ordinary human Consciousness
i.e. when he does some things
already manages at this level

i.e. then it turns out that for him
next control
this is already a special area
as a rule the area
where it is needed it is already really there
somehow help more radically
and already at the normal level
he already does a lot of things
because basically
according to the gradation of the structure of the World
you can lay out the picture of the world vertically

for example from God's point of view
how does god work
to enlarge it or something more concentrated in
go out into events

He's just in the management structure.
can rise
into the structure more well actually, as if dense layers of information

it turns out that there are several events in one place
i.e. it's basically so elementary clear, yes

it turns out that the closer He is to Himself
the greater the number of events
It includes control

and if you ask yourself the question
and how does God then govern Himself?
i.e. with your own information

then considering that He controls any information
He must manage
the whole system at any point
Well here it's equivalent

it turns out in relation to Oneself
It doesn't provide any advantages.
He just does the management for everyone.
and at the same time control occurs
even in many ways those who are investigative and those who go to Him

i.e., in fact, the more precisely people control
for example in the technologies of Eternal Development
the more opportunities God has

actually do more extensive next work there
and again to increase everything

i.e. it turns out that this is the interval of time or something
when you consider the Action of such God
shows that here to control in this way
need first level

first axiom of management

equalize the control system

the system of Perception actually
what I call "everyday Perception" I call
it doesn't have to be everyday
for example, at the everyday level, this is generally a common perception

and we can do it so that even under some circumstances
well, in general, it would seem that the management is complex
there expanded to all systems
for a large number of people

we are still in a normal state
which is Infinite
i.e. it shouldn't be any different
maybe except in some cases when
how does a normal person react
to some problem
naturally the manager reacts
well, like an ordinary , simple person

so in this case we are talking about
what we visualize
i.e. we try to highlight the area
and make it equivalent
area in visual understanding

that is, if in one area
what applies
to the normal level of human perception

and from the point of view of Consciousness
this is a normal level of management
and advanced level
it should be the same at every point

so the first level of transition

for such management
this skill is some kind of volumetric , let's say front
such a wave exists wave front

then this wave must touch in some places
with the expanded consciousness system as if
with the wave where the direct control itself occurs

i.e. in this case we end up counting
that man does not always control directly

well, like in the collective Consciousness
such aspects are naturally embedded
that a person can be somewhere

a tree can grow in its place
and directly influence the growth of the tree
it is believed that this is not even necessary, for example
and if you don't need it, then don't
So the mechanism is not worked out, yes

i.e. it is considered that a person does not control

this very phase of collective Consciousness
we overcome
we show that man is in control
all elements of Reality

and at the same time, so that there would be meaning
to be distracted by something
there is some sense in controlling Reality
the tree is growing quite well anyway

the point is that we must manage
in those cases when our personal assistance is needed

and this is the gradation of management
related to personal context
this is the second level
Salvation level decision making level

i.e. if the first aspect
we approach and contact the control wave
i.e. we practically take control away from ourselves
into a more extended area
it is believed that it is somewhere a little further in space
we haven't defined it yet

so our action is only that
that we are kind of pushing the controls a little further

the second area we try to fix this area
i.e. we do it so that it means identification
of this system of consequences
i.e. identification
where is the specific point that controls
this work would be such that in the future
control area
was no different from the area of ordinary Perception

then it turns out that when a person perceives a nuclear power plant
if there are even any problems there
already aligns the system
and comes to a system that is already more stabilized, for example

if his Perception is so developed

and secondly, if he finds something there
then he starts to go in even further
in the management area
and begins to gain control

for example, if we look at it from God's point of view, well, here it is
as God in general in principle with His own Consciousness
perceives the World

then from the point of view of God's Consciousness
for Him
that the remote element even into Infinity
that the element is approximate
it's the same thing for Him

and a person perceives with his Consciousness
it turns out that it is enough
in general well, a vast area as well
there is some kind of Macro perception system

and it turns out that when a person
for example, it begins to divide the area
those. he is physically for example it is not there
somewhere in a remote area
but he can also consider with his Consciousness

because Consciousness allows it

virtually adapt any area to that
that this area can somehow be worked with
because it exists

for example there is an infinite region
in Consciousness [...]
that there is some kind of Infinite region
any person

it means it is perceived differently
but for example the word "Infinity" means it exists

in Consciousness you can work
with any information object

it turns out Consciousness in principle
what is God's
what does a person have
criterial approach to the action of Consciousness
he is basically the same

because if you look at the structure
how does God work for example
it's just that God has Consciousness , that is Action
He can translate the form of Consciousness into Action yes
the difference is that he organizes the system

but if we take a closer look
we can organize that too

i.e. it is possible to organize an organ there, for example yes some event
it turns out that
what is the further difference then?

the further difference is that
that God simultaneously all events
can influence them
to be, as it were, outside the system of events

so, but a person can also take control higher and higher
over the event
and now it already exists here
third next control
on the translation of this extended system
to the exact so to speak, a predictively accurate control system

that we each next control

for the next one as if by a group of events
we are, as it were, verified by the Action of God
but not to the usual action
and where God takes control of this group of events

remember first of all such management
not that exactly the same groups of events
then it turns out that you are entering the root
and you need to find the process first yes
approach to management

you basically look
how does God even manage the system as such
global system and local one

for this, management may be useful
according to the structure, well, maybe even the external environment of any
i.e. you see some forest and some task there is a large massif
this is how God fixed this system

where is the area you have allocated
for example, you perceived it with your eyesight
there the Soul perceived some area

imposed a visual structure on the vision of the Soul
and the Soul can look from there too
i.e. from external space
It does not necessarily look like physical vision.

there is such a mechanism for viewing by the Soul
The soul is actually removed from the control area.
towards you towards the physical body
and you get control of the Eternal Life technology

after all, man is present everywhere too
His soul is also everywhere
in any event

when a person passes somewhere
he can just be active
i.e. the dynamic part of the Soul
just like remove from the area
and return to your own Soul

i.e. he first recognizes his Soul here in this system
looks where his area is
and directly after removing it he gets all the information

he doesn't go into detail
complex information is obtained

and if we look
how does god act in this case
then God's process of removal is the same
but He has
the point of organization of this entire Reality

a person has a process of removal
to organize
he must reach the point of organization
in the one that God made and this Reality
this is this segment

then he must his own Perception
distribute to a specific place
where did god make

here it turns out that
the same thing to exit to the control area
you just need to get to this point in principle, yes
the easiest option

i.e. to get to the point where God made this event
or for example to the control point

where is god as if makes an event

i.e. consider the level
where else is He from our well from the human point of view
He still does
for example God makes an event

It gives a person the opportunity to see
because a simple analysis of the situation there is of a logical type
some events are happening in the World
a person sees what is happening in the world
and it turns out that the person is observing that
what does god do
even with physical vision

and by the way here is one of the parameters to align vision yes
improve normal physical vision
it's the ability to do the same thing
in relation to a known object
and observe at the same time

and physical vision
and Soul

then there is a correlation
vision of the Soul
physical vision
and by the way the sight of God

here is if there is a possibility to correlate
and also the Action of God as a structure of vision
i.e. consider what He sees next
then vision is quickly restored
in a person

and by the way, it is also possible to restore any organ
see how the system or cells are developing
from God's point of view
the trajectory of development in optics is again the path of knowledge
the next element of Consciousness

because logically, although we are talking about here
about Consciousness as such
but nevertheless we are talking about it
that the structure of the Spirit is expanding
here too ^{yes} to this area
or is there a structure of the Soul ^{For example}

and it turns out
that we need to develop precise control

often precise control
it is also needed in systems, ^{well}, in those systems of counter-terrorism
in precision diagnostic systems
often in the treatment of diseases

i.e. you need to know absolutely precisely
where the person is
where to output the control impulse

and in general precise knowledge of events
this is a guarantee, first of ^{all}, of human safety
some Norm ^{and} events

and additionally it is also a mechanism
exact i.e. prolonged such
widespread action and to Infinity

because when a person recognizes himself
the structure of his Soul seems to be passing
through the dynamic part
and the matrix is precisely the static part itself
she still remains in this area

i.e. in the phase object of information
there is a matrix part
i.e. where the Soul is always present
and the dynamics are kind of removed

and then the person is constantly filled
well, let's say it's a kind of energy or resource yes
for Eternal development
and only from your Soul
he doesn't need any sources, so he doesn't get any at all
he just finds the structure of the Soul

so it turns out that it is the same as God does
Where did he come from? Did he take some energy there, for example?
if you think about it

God had to make the whole world
then what kind of energy is there?
there was basically no energy

then He still had to create Reality
Well, how did He do it?
without having any energy or support nothing works

then he should have
in principle, if we proceed from this, yes

God has a task there to create the World, for example
or any object
which is basically the same thing
create one object
any information system at all
there create some kind of crystal there
in the form of information there yes And
combine the word there crystal-information yes

crystal is still a word that means something
some physical variant
and the information is kind of vague
well, information and that's all

so it turns out if the word exists
then we can reach physical Reality

so God had a task
you must first create yourself
well, for example, call it there
so where will he get the first word from?

Well, I mean, he should have how to approach yourself and perceive
perceiving the system as if from the outside
need to be named relative
because it's just like that when nothing exists
and it seems like it's not possible, yes
this name will not mean anything

it means that He must create Reality
and through Reality to call i.e.

so it turns out that the point of Consciousness is the point of control
is the presence of an external point
in relation to Reality

i.e. the exact area of control
this is what also contains external control
through all Reality

this is the point that we actually control
always has a connection with external Reality
through which it occurs
well, actually even primary management
although it looks like an investigation

i.e. [...] investigative signal
[...] this is personal management

but also just this passage of this wave of control
this is the creation of events

so it turns out that in general it's all about management
creating events
starts from some kind of Infinite Future
and goes towards the person

but that means in the future these events will definitely exist

here God looked at such a point

area of existence of events

I was able to recreate myself ^{there} and create myself
through the construction of external events

and then He can bring about Action

for ^{example}, it turns out that for God in principle
this is the level that originally was the word
those. some designation

also has a ^{generally} primary meaning

and not only there for man that "In the beginning was the word"

so it turns out that we

from the point of view of God's Action

for the precise, ^{so to speak}, management of the World

we see that all the waves are concentrated in this area

which denote

actually a passage through all systems of Reality

and here the next aspect arises

where then does this kind of management go, ^{let's say}

what we control among other things

and its own structure

well, for example, there is health improvement, control over the physical body

after all, a person can sometimes see not so often

but in principle if there is a need

can be controlled

your own position somewhere

and then you have to look

and where then is the information at the level [...]

Of course, every person understands

Where is it located? No problem.

but at the level of his own Thinking

in the space of his Thinking

where should information about it be located

in fact, it can be ^{sort of} combined

with physical Reality

then it turns out that this point coincides

at the level of physical action with you simply

then you find the transition

information Thinking

into the physical body

and then this is already it, after all, then control over the fabric
actual fabric
once you have managed to make the transition
so you did the optical control differently
or at least just management
it is not necessary to consider any wave there

from this area of space
crossed over
and to the body
and moved from information as such
you have received control from the point of view of the physical body

i.e. Norm means health
The norm of events ^{that are related}
often not only with the physical body

after all, God has an inner world there, ^{for example}
it is the same in action
i.e. God does not differentiate in principle, by and large
what is His Thinking
what is Spiritual Action
what is physical
for Him, in principle, it is one matter

and for a person, generally speaking, it's the same
It's just that a person is more focused on physical action

it turns out that here
if we start to analyze the situation further
that physical action as a system of information
when you perceive information
how information is created there

those. here is the Creator God
created Reality
and you participate in the creation

then it turns out that you are harmoniously at the control point ^{yes}
this point now I am actually there
^{well} it looks like what I found in the information ^{and} showed

by means of logical Spiritual management and

and this point is located in a specific place
basically I'm talking now
she is in this place ^{for example}

but I can control here for example
a large array of information
someone might be in charge somewhere else
it is more convenient to control in front of you, more familiar to Perception

himself all the time as if he is reading a newspaper
and it's easier to manage in this field, it's just easier

and for this you just need to be very comfortable
have such a dynamic link in management

i.e. you have developed control at a specific point
Do you know roughly where it is?

and at the information level this is definitely known
and there is some kind of system there
which means the action of control
When it is more fixed, it means it is more stable

i.e. a sufficient level of management
hold for a few seconds at this point
Often control is implemented

the main thing is to take this management into account in a comprehensive
manner
all these waves of external Reality
or at least hold at the right point from the event

often it looks literal
like a precise measurement with some rays
some simple logical elements

let's say a person when he walks there on the street somewhere buildings
already knows perfectly well
what is at what distance
but he doesn't ask himself a question there
how many meters from here and how many meters from there to that object

here is the same condition
i.e. transfer to management
into normal, familiar control
here are your other advantages

in such a system when you are a normal system of Perception

enter into this system

i.e. practically watch
through the usual perspective of Perception
but in the field of management

if in direct control technologies
there is of course a region
just control it as an impulse and get it

then here you kind of actually perceive
exactly the same way you perceive it
this makes it possible to objectify the picture
near yourself
you are in the management area

if you rise higher as if vertically
then you see exactly that, by the way, higher up
in relation to the physical body
i.e. along the vertical body

then you already see the structure of your physical Reality
i.e., for example, you can give yourself 2-3 impulses in control
to carry out health improvement
and then see the structure of the development of events
which is already further down the level
i.e. those events are under control

the closer you bring control to yourself
the more controllable the following events are

so logically if you are completely directing
information on yourself
events of the Infinite Future
they are completely under control

let's say we ask a person there
and any one can even be [...] area [...]
Is the infinite future controllable for example?

of course from the point of view of the current time
there in Infinity what is there to control in principle yes
and so it is clear that some value is stable

Infinity is fixed as always
only [...] size

but in the world there always exist

direct connections

if in some element
even in the logical element of Perception
there is stability
This means that this can be transferred to technology

and it turns out that it is precisely the Infinite systems
they are absolutely controllable

and then it turns out that if we are from them
we are already arriving at the control point
to the human body
then we get
absolutely stable absolutely precise control

i.e. it will turn out that control
Perceptions of one's body are actually
at the level of some kind of border area of information
well somewhere around 20 or 25 centimeters from the body

then we can consider it
area which denotes the phase of stability
i.e. absolute stability in management
and from this area it is already possible to calmly withdraw
at any distance from yourself

i.e. binding in dynamics
first level of binding
so as not to fix this area
and don't look there, don't waste time

for example, you read a newspaper
here is the physical plane of the newspaper
you take it straight from the newspaper
at some distance
output the control structure
and the structure moves there then

there are two differences here
or you bind the control
as if to some kind of rough system

or if you don't bind
then you control from a distance from yourself
but in any case it is always useful to manage from yourself

why do i say that you also need to be able to manage
through a newspaper or something with a pen

because when you work

with physical space

for example, there is a table, yes

it's good that the control point is here

for example, there it turned out, let's assume

and if it ends up on the table then I start to think

, for example, that's located here

although of course nothing interferes

but in principle, if a person

just starting to get into management

any structure of physical Reality

immediately as the information system leads to that

what and how then the system of physical Reality

like she 's entering the control phase

you need to be able to learn to go beyond the area

that nothing gets in the way

and to go beyond the scope of control

you just need to have super speed

for example, there is physical Reality

table yes

let's look at the information

where is this table or newspaper for example in the office

and then it turns out you need to look

how fast does this element move

in your control

he may not be located anywhere at all yet

physically it is located

but you are in control in the space of Thinking

and not in physical space

when do you start to differentiate

then by the way you see that for example a person

then it doesn't bother anyone at all

pay attention here

that people can be very tight

well, for example, to be there for each other

but their areas never intersect

and the level, well, they will sort of intersect
in a good way in some aspects
in terms of what could be problems
as I said, man was originally created in management, as it were
when during the creation of his Soul of such a plan

which he should have had
all Reality in management
just as God did

and the primary creation is from God
naturally there is enough space for everyone yes
information is endless

there is a property of information
enhance the best management phases
for example in collective management
I'm just saying this property again
that when there is control at the same level
the system improves and then there is another world
more harmonious creative

that's exactly it, everyone works in the same context
for example, there is the launch of all nuclear weapons into orbit
and in case of the slightest problem for humanity
the weapon was neutralized
for example such an aspect yes

if a million people work there they think
it's one system
if there is already a billion there, the issue is practically resolved
and two is already decided with the reserve there is control

it turns out that if we have control of this type
then here we need to track it very clearly
what is very such well how favorable action of God
towards you
in relation to a person

and so favorable that you see
that the Action of God
it's already so natural there
how harmonious
as for example at the level which is even before the birth of a person
and at the level when the most he there are the best systems or something

he perceives a person well in his development

even he may not be able to elaborate
there is some kind of bright, let's say Divine, Truth
Divine Wave of Development
which is not often perceived may be there
strictly differentiated

but in principle it is such a spiritual state
which is the basis for any space

namely the management of effective management

i.e. here you need to keep in mind
that not only there are optical systems
not just some geometric levels
there is a level of the state of the Spirit
who is the manager
but at the same time we are not switching to such optics
we work in the Infinite phase

i.e. the Spiritual level is the level of Infinity
which is contained in the physical body for example there

and then the reference level is the Spirit
Infinite Spirit
which one well as if it is located
and is located at some point in the physical body
and you understand that this Spirit is specifically yours
i.e. you see optics
you see, it is basically impossible to make a mistake there
it is clear that the Spirit is yours but here you need to see the area
the region itself

Although the phase is infinite, the area must be visible.
exactly like a glow

and this is not just one element
it may be some initial element of the Spirit there
and you through the Perception of the optics of the Spirit
you immediately understand what you perceive
all Infinity in dynamics

means imposition
structures of the Spiritual Administration
Soul management structures
i.e. all your mechanisms that exist yes

in the Consciousness Management System
where do you hold control like this
that your Spiritual Administration is already from here
as if from oneself, from the physical body

your Soul control
then all control systems
hit one specific point

and then it turns out that in addition to the fact that you through
Consciousness
conduct sustainable management
and achieve results

only because you seem to be in control

those. register register
and often nothing else is needed
it's quite easy to control
control area

after all, what is often the principle of management in general?

Well, for example, there is a need to cure some disease
then it is enough to enter the digital row
to this area
and then you can just stay there for some time

and so that the area does not dissipate
these are precisely the elements of the expansion of Consciousness
with the specified mechanism
Of course, other mechanisms can be implemented

but it's exactly how to keep control at one point
this is precision first of all because
that when you are in one area for a long time in some
then you accumulate the number of events
in relation to this area
i.e. you start to analyze the following events

so secondly, this is work going on at the same time
it's just your Spirit

we can highlight the work of the Soul here directly
i.e. with your consciousness you hold the control area
and with your Soul you take it and improve it

optics of the Soul simply, etc.

i.e. you can enter numbers, shapes, colors, etc.
but at the same time the main thing is some kind of sublimation of events
concentration of events
keep in the form of understanding
what is the event you are doing, generally speaking
it is here and it is certainly improving yes

here's to keep improving all the time
if suddenly some other information starts yes
for example, you went to the control area
and suddenly she moved and became lighter, for example
Well, not even by weight, it just takes up space

it means something happened in the management
i.e. it is a good diagnostic system

and let's assume that there are some buildings there to diagnose some machines
well let's even assume the human body
just all the time [...] that means we invest in improvement
It doesn't even matter what system it is

here you can see that there is a kind of pre-control
as if a super-controlling area
which are united

when everything is fine
i.e. the diagnostics are normal
then the pre-control region, i.e. the pre-pulse region
i.e. where there is no event yet, but maybe not even
control impulse

and the area is the supercontrol area
i.e. that which generally contains everything that concerns the event
already improved event yes

when these areas coincide

God originally made i0 entry level
where there was no area of control
and there was no pre-control area there either

i.e. the combination of the area is already complete
in the worked out part of the events
with the area that was practically
before all these actions

this is the concentration of control precision

i.e. you still need to be able to concentrate such a concept
as "control precision"

especially since we work for example
with various technologies that improve accuracy

for example, there are digital rows displayed on buildings and cars
and then it turns out that this binding
just one that always exists in memory
this is already an improvement in concentration

and technology just shows according to my Teaching
that it speeds up significantly
human prognostic capabilities

that's why he registered once
a person somehow digital area control area
starts working on it
and it works correctly in certain areas

which he simply paints

there is, for example, one of the methods
written in just one sentence
there is a concentration on numbers
and that's all

it turns out that here we have
quite a diverse number of methods
can be seen
as a rule, there is still a finite number of them
there aren't that many of them for individual systems

and write them out
there in a certain row and brought to accuracy
so that a person definitely had an event
we are just deducing well this is the management
that a person gets the opportunity
well, almost absolutely accurate
maybe [...] if he wants to control
the system of all external and internal events

for example, in principle it is possible to control with extreme precision
but this is already a question of a person's faith
how much does he believe in this area
perceives everything accurately

for example, it perceives a signal
but as a rule, a person's primary practice is such
that he should somehow look through it there first

By the way, I advise you to always work
for example the same
diagnostic work
any information objects
it means to see what is being controlled
what is happening diagnostics
and make sure what you saw earlier
this is fair and right

and often it is enough to make sure of this 2-3 times
and no doubts arise in a person
it just works

this is when it starts to move into the structure of work
then absolute precision arises
i.e. he can generally take a look there
molecular level

i.e. the person is at this point, well, in the future , yes
let it be in a second it doesn't matter
or in a million years
well it doesn't matter even the time is time

and he can see clearly
on the structure of its tissue system
what should be done then?
from a human point of view

as a rule, the person goes into management
with some task
and there self-control is not often the rescuers
in fact, they don't devote much time to themselves

This is what I recommend
from the point of view of technologies of Eternal Life
spend at least a few seconds a day there
An eternal man must devote himself to himself

if we work as if just not to forget at all

because if you write out a table

and for example, I have to do it every day according to the table
take care of yourself

then many received the system
build up momentum fairly quickly
they see that they have created a good program for the future
then they forget what they need to do
still, at least sometimes

and here we need to remember on a logical level
technology for example Eternal life
implies that many things must be done logically

to improve, for example, [...]
don't accumulate any problems there loads yes
in a person
and so that he can review events in a timely manner
and in general [...] precisely regulates

i.e. it is a question of technology
we understand what we are doing
including a narrow process
but as practice shows
thousands of testimonies of the spread of the Teaching
my official students
that this is an absolutely systemic level

there, everything basically comes down to the amount of work

if this amount of work could be made systematic
i.e. for example, periodically look after yourself
it is precisely the management of Eternal Development that should be done

because the difference seems to be small
but on the other hand there is a different control point
here is another outgoing impulse

It's one thing to treat someone and to treat something there
a person can improve his health there
and to be there for example a hundred years healthy yes

but the task of Eternal development
it's not just normal health
this is the ability to work through the structure of Eternity

This is the most precise work
when you have an impulse coming from you it is already Eternal

so the next impulse of work is as if in control yes
this is the exact location
that you should be so at the same time
and bring closer and at the same time
how to free up this point a little
for creative degrees of freedom
that your impulse must be Eternal

i.e. you must actually separate Eternity from yourself
and bring it into the control phase

then by the way it's just such an impulse you know
absolutely guaranteed protection
and all of them

visible at a certain level
that in this impulse you protect everyone
then it becomes calm
when you see that others are protected

and then it turns out that this impulse
it actually takes shape in management in this way
what you should basically be able to do in practice
the element of Eternity to highlight
in any other i.e. in an equal information system

why did God make man Eternal for example initially

because the principle of equality
He is wherever he is
He must see the Eternal Element
since He Himself is Eternal

the same you [...] anywhere
have Eternal Impulse

then you get your level of Eternity
forms [...] the structure of Eternity
how do you extract in your Perception
from another object

i.e. you see that structure
which one do you well it sends a signal
which is Eternal

then you just have to change your point of view yes
i.e. to look more broadly

the only difference here is that
what if we compare it like this , let's say at the level of Thinking or something
or just look at something
either understand immediately, naturally, understand everything

but if you look and think about it in the same place
i.e. you can look at the satellite there
or you can watch and think
Here's what's in it, for example, yes
and in general about any more or less complex element

then it turns out to be viewing and thinking at the same time
this is the structure of the primary, well, in fact, Eternity
in Thinking

Perception and Thinking skills
any structure of Reality
make united by your willpower

it is some kind of particle of Eternity
maybe even some kind of crystal
on which it begins to develop
the structure of already technological Eternity

then it turns out that the impulse that you start
practically outline in management
and give as an impulse to Eternity
he is at the same time

and coming
and yours

and here is the selection of your system
this is already a special task of management of this type
that anyone who concerns you, well, specifically you
information element
there or which concerns the information of the physical body
or simply your Thinking in general of any aspect
becomes Eternal

i.e. be able to transform an external signal
due to technology
Eternal

then it turns out when you are in technology
you start acting from the structure
you make it eternal
then it turns out that you are the technology as such
in fact, you always make it universal

if you succeeded
make some element Eternal there
some element of ^{just} any information
then what difference does it make to you, you get back practically the same
amount
information of Eternity

and that means it turns out that God
there created the World Infinite in terms of development
received all the information of Eternity
because He set the task in the same way and that's it
and He got back just the opposite action

and it comes from technology
if you start doing this
that is the very impulse I am talking about
he arose and [...] Eternity
All the time I try to bring it to that now
where is the impulse ^{as if} you are inside the ^{person}

but in reality it's just that knowledge
which you implement in system management

and the more accurate they are, the
the more guaranteed they are
so from the point of view of control over the situation
so naturally you are already more Eternal already technologically

I'm not saying that God created everything originally Eternal

but simply technologically

and when you are technologically Eternal
then everything is practically gone, there are no problems at all

you see events
you know how to improve your health in time
you know how to help people in time and that's it

then you are already definitely on the basis of personal technology

guarantee yourself eternal development
that is what God actually wants from people

and if you start to see this structure
even if you ask the question
why did it happen that God is trying to achieve something like that

here people are free
initially they make one decision yes
some final results of development

now there is a possibility of global destruction
they often many just don't understand what it is
Well, it looks like it might even be a forced measure
that they are forced to deal with the technologies of the Eternal
namely the technologies of Eternal development
because it might just not be possible otherwise now

if we assume that there is
some local, well, some optical path
then this can clearly be extended to all phenomena
i.e. we must understand their principle
how to exclude the peculiarity of the concept of "human life"
first of all
really pragmatically even on statistics
universal

i.e. it turns out that this is the level
still no choice of solutions

i.e. the next level
this point of exit and into the control system
into the extended system
this is the ability to recognize a kind of mutual action
and God and man

and see that the structure of Eternity is the structure of knowledge
i.e. in fact, this is a quick collection of knowledge
transfer to control point

that's where the knowledge is

for example we say "there is knowledge about this or that" yes
and where is the knowledge, i.e. where to get it

and here is the location of knowledge
this is also a control point

but it can in principle be a point absolutely everywhere

why is human consciousness so widespread
what is it
and Infinitely at the same time
and if necessary has some localization in Thinking

because it's just a translation into the structure of the World
at the same time, i.e. he took the knowledge and put it here
in management

and how did I put it?

took the impulse simply from there physical body
brought out
in this case this impulse can be there
through there absolutely Infinite level Macrosystem
and I think this is knowledge
what they are like there is not really important
this is knowledge

Well of course they are macro-creative there
through the Macrosystem simply
then it is easiest to derive knowledge
general field of knowledge
Well, not knowledge, just a word

let's take all the knowledge that exists there
they brought it out here and that's it

and then your control point
so that it would be more stable
you need to rest and take some breaks

here you do concentration this is your personal knowledge

you decided to transfer the concentration
you can spend many hours there in a row
hold the control area while doing something

and you can kind of distract yourself
then you need to fill it with more knowledge

i.e. to prolong
i.e. the knowledge of this system should be like this
so that it can exist autonomously for some time

it often happens that we are so filled
that this issue has already been resolved, you don't need to control it

and here is just the solution to the problem
favorable solution to the issue
what is "favorable"
it's just the creative aspect of the solution
this is an answer directed towards Eternal development
gives the opportunity to already hold control here
that you just decided

what does the concept of "final control element" mean?
it's just the next level of Macro-creation
i.e. the next level of Macrodevelopment ^{yes}
but by the way it looks more stable now
more harmonious

someone was cured there
now you have stabilization closer to you ^{yes}
in management
i.e. you are already managing more steadily

did some useful action
it came true
you compared everything accurately
and again stabilization began

and so it turns out that you accumulate experience
which is again approaching you by the way here
even geometrically visible
sustainability is coming to you

and then the body can enter
into the structure of absolute stability
there for some time, ^{well,} for a minute or a second
you start to see
that is almost natural your personal state
it is absolutely stable
because you made control systems
which have come to pass

but the control is universal
so at that moment you were definitely there
are completely universal in the control phase

i.e. you were not available there for problems, etc.

and it turns out if you divide this time
to that level
that at some point a person has no problems
i.e. he really doesn't have any creative problems there

then having looked at these areas
from the management area
then you can bring them out, well, sort of connect them
into some universal area
i.e. how to combine into one
everything that concerns sustainable good governance

and all systems that can be unfavorable, for example
to consider in the field of future events
there begins a signal of some negative nature
quickly moved into the area of earlier favorable decisions
i.e. you once did something even

something just worked out for you
not necessarily by the way it's just
some kind of concentrated control
there are just some things that are often resolved quickly

get into the area of what you were able to do
some things are positive and that's all

and this is the area that is possibly negative
it starts to decrease sharply
perhaps it begins to go into Infinity

but in Infinity there, as we said, [...]
and then the exit point to Infinity
there, on the contrary, there is stable management

i.e. in this way we deduce
instability region
well, some kind of negative problem
in the control phase

i.e. there is a region
which is like a trap for problems, yes
so this is a unique trap
this is often precisely the accuracy of diagnosis
control systems

for example, here I am diagnosing an airplane

I first immediately maximally in one impulse

I remove all problems first

i.e. I minimize everything that is possible
if some serious problem comes up there
at the level of information there, so to speak, yes
or is someone suddenly thinking about it

I immediately take it further and do the management
until it stabilizes

i.e. I often don't answer the question
even if there is an urgent question
until I get the controls right

i.e. I first align
I output up to the exclusion of parameters as much as possible
and then the management was already leveled out
then I talk about what needs to be done

and usually people watch afterwards
really, there wasn't even anything negative there
as much as was originally presented

i.e. the ability to reduce the primary phase
and constantly reduce it confidently
this is exactly a very significant level
for management of this type and nature
that you begin to see the controlling aspect
as a completely stable area of management

i.e. you see that at any time any event
It's better not to let things get to some kind of sharply negative events

but there is someone who needs help
it's not just about you, for example

then the ability to change any event in a positive direction
this is already an absolutely stable control point yes
absolutely sustainable future
and you need to remember about this point
especially if in difficult situations

and how do you relate to this point, for example?
you figured it out and applied it
just remember where this place is

and when you start to, well, make decisions
from the point of view it may even be often
a person makes a decision

well, is it an ideology of actions?

for example , he has some kind of super-complex task there
he thinks, how will he cope there alone , for example?

then the existence of the point guarantees him that he will cope

here is the ability to consider the point of some guarantees
as a sustainable management structure

i.e. it is immediately clear that this is just information
[...] just information
ability to shift information
this is what I try to remember

even if at the level of collective Consciousness
there it is perceived as some kind of complexity there
Well let's assume in the form of a fire, for example , at a nuclear power plant
Well, in the end it could be that the trash in the trash can is burning by
accident
Everyone threw away the cigarette butt

i.e. to derive minimize
dramatically minimize the system
The fact that the garbage is burning doesn't seem to pose a threat to anyone

and the ability to somehow reduce to a minimum
and then to the level of that
that there were no negative events

and thus we find
these are the kind of dynamic volitional control systems
which are already working as aligned

i.e. you have determined the point
defined the structure of Eternity
in its impulse of control
and Eternity is such that it is organized
as I already said
from an external signal frequency
again I add the word "often"

because in the next administration
we can say that we can work
the structure of the original Eternity
which exists in man

but then a person begins to analyze himself
he starts to think
and where is its structure

and is he doing the right thing?
isn't he mistaken?

often some systems of Thinking
if he overcomes them
then maybe just shine there with Eternity from itself
and that's all

then external structures too
it is not necessary to look for an external contour

I'm more for those technologists who are starting to consider
all aspects of interaction ^{yes}
the structure is more ^{like} a concentrated management
from the point of view of such a conglomerate of information

when external information is always taken into account
more for analytical management
when analysts actually know [...] see
what is happening in the management structure as such

what happens if we have let's assume control
running as impulse control
then there are no special problems
then a technologist
is in its own area

but what if it is still useful for technologists?
perceive external analytics
as the structure of Eternity

then there is no question about that
what is the concept of "energy" ^{yes}
the only question is the application of knowledge

in the knowledge accounting structure
that we take into account knowledge and apply it
and then it turns out that there are no problems at all

a person does not have

it has a completely stable control point
can control the system with complete precision
to its predictable future, yes
control the future

and unite
external Eternity and your personal, as it were, personal Eternity

then the unification of these Eternities

by the way it already gives controlled precision
completely conscious
there on the conditions of the Infinite even the perspective of development of
events

precisely through Consciousness
perceive the future
as a structure of clear action

who cares
Well, if a person has ever made a prognosis there
it came true
why can he do it another time in principle

but the thing is that many people even do the right thing there
they don't know anything about prognostics
they went to the right store there and bought things for themselves [...]
but there are a lot of shops, that's why they went to this one

i.e. if you extend
the person has a wealth of experience
any moreover

and the ability to experience this is simply more systemic
see
express systematically to bring into a systematic form
the ability to combine technology with Eternity, yes
this is a guaranteed 100% result
that the person is definitely one hundred percent
guarantees precisely optimality
in fact often in the ideal case
in full control
as a rule in the ideal case
among technologists who have been studying for a long time
so there is a system

i.e. they have almost complete control over all information

and then he can count
that it is in the phase of stable management
study there calmly
some other volumes

then by the way he can more actively transfer knowledge
more actively with specific examples
there are your own or there are other people

and the ability to transfer knowledge is even greater experience, etc., etc.

therefore precision in control

achieved by sustainability
Well, let's assume that the exact aspects are concentration
allows you not only to personally manage there
but also to transmit precise knowledge to others

and precise knowledge can be transmitted in general infinitely
this means guaranteed development of the World
in the structure of Eternity
and Infinite time

This is where I end today's seminar.

Thank you very much for your attention
