

GRIGORY GRABOVOY
The Teaching about God
**Predictive management
by managing the future**
16.12.2005

In this topic I show
how to develop prognostics
being in a fairly calm system
maybe even somewhere at the management training level

i.e. a fragment of future events is highlighted
and all control parameters are considered
which correspond, for example , to the practice of action now

i.e. from the point of view of logic
if you look at future events
as for events, for example, such as those that can be
change for the better

then it turns out that you can trace
the impulse of control that comes from you
in the current tense
from the point of view of future events
or there is, for example, an impulse that could be
in a second even or in an hour

and calmly correlate [...]
because if you look
through future events
then there is practically no interference

well, that is, it turns out that there is interference
to be honest it does arise
at the most linear control
i.e. from the current time, for example , to the future

if you work from the future tense
for example in some fragment after the present
well, for example, a little further into the future
then it turns out that you have an absolutely stable area
to predict the control of this system
and a precise level of consideration of events

there is such a principle here

for example from God's point of view
For Him, events are equivalent
into the future
and if you think about it
How does he even make decisions there, for example?
if there are two versions of events

i.e. simple Action of God
if you consider this
how does he act in terms of logic
if He can change His mind at any moment

and a change of decision for God
it could be some kind of fairly radical change there
all events in the World

but it turns out that for a person there is
comparable action factor
for example, there are some negative, non-creative processes there
they are more often excluded
from a radical influence on the World as a whole yes
i.e. special Worlds of human military security, etc.

it turns out that in order to fix
this is God's decision making
we need to consider first of all
World status
God who created the world
He is considering
the structure of the external world
as a structure that has, well, in principle, equal rights
in the structure of, for example, Eternal Development

then it turns out that there is an equilibrium phase
which allows to keep the World at the level of control

i.e. it turns out that we see the status of the created
where what is created has its own level of influence

i.e. what was created has, in fact, geometrically, so to speak
future position
if we go from the point of view of geometrical [...]
there take and allocate
area of the future
as some kind of geometric parameter

it turns out that with this point of view

It's easy to understand God now
He must then simply choose a solution.
depending on what He sees
i.e. the same way a person does

if he goes somewhere there and does something
some purchases and actions
then this objective Reality exists

God has the factor of this objective Reality
this is the level of equality of objects of Reality
and it turns out that He Himself laid this factor
in management
[...] He created it

and it turns out that based on this
to make a decision and see exactly
that future which will happen in absolute understanding
first of all, *for example*, so that there are no negative events
need external information objects
which meet in the future
equalize
from the point of view of their structure of Eternal development

i.e. it is necessary to consider the information
corresponding to some future object
so as to see
how this object develops in the future
in some Infinite time
develops Forever *for example*
from the point of view of its creative functions

and then it was clear
that from the point of view of all, *let's say*, possible events
there are certain points of intersection
all objects of the future
where there is still some more or less definite
stable phase

this stable phase can be considered
like the physical world

and that's when we start to make decisions, *for example*
if a person ended up there, *for example* , in America
he must somehow move from there
if he has an accident, he actually teleports

then he should consider there for example
fly to Russia

i.e. here it turns out that, well, let's put it this way
future decision making system
it also depends on some specific situations
on a physical level
therefore taking into account
that the number of solutions is not that big
generally speaking in principle
i.e. there is even a possibility of analyzing these decisions
at the logical level
provided that the external environment
as a rule, balanced

i.e. [...] space can be said with certainty
that a meteorite, for example, won't fall on him there in the next hundred years
well, the fact is that the meteorite basically burns up in the atmosphere, etc.

i.e. are there any existing ones?
well when do you start to react
on the structure of the external Norm
then it turns out that the prognosis is accurate
it's basically your state of Perception
based on some factors of knowledge of the future
literally elementary

i.e. the easiest way to know the future
from the point of view of future information in general
which means that in the future, for example, Norma exists

it is clear that the Norm exists in the future
so you are considering
its action at the level
already have very specific information factors
which really correspond to the Reality of the future

and here from the point of view of the Macrosalvation system
you are still doing preemptive action Infinite
so that the city really develops there forever

it turns out that we are already approaching the personal factor
factor of people's lives
this is already an individual path for everyone
this is the path to life, this is the individual path of each person
the way to help another person's life
a completely individual path

and if there are some other moments in Reality
this is often a generalized path
everyone there can, for example, build according to drawings, let's assume
can see some objects of Reality
and here is the path of man to Salvation
to another person altogether
as well as the way of God to man
he is always unique
and therefore, in principle, God is very simple
can see all people
because He walks on one and only path
to all people
for example, along the path of Eternal development

then it turns out that here we can
this is a predictive distant vision
and already controlled
there is a kind of management phase, i.e. you start to manage
you must understand that the future is fixed
and it is called , for example , "controlled future"

if you see
the state of this future environment
Thus
that controllability is, so to speak, objectified enough
i.e. the control environment is even felt there
as some kind of soft management environment

then it means you are in control
the situation both now and in the future

i.e. the future of the controllability of the situation
it should be like this
that you should always be sure
that you can do the same as now
there is some positive action there
Well, basically, there is any creative thing you want

You should also clearly understand and know
that in the future the same thing will happen
then you are in complete control
the prognostic phase of their personal decisions

i.e. then in any case you don't have to see in detail
with an interval of milliseconds
what is happening at any given moment

you just need to be in the situation
in the form of management
where you manage as you manage in the present

there must be confidence in some kind of transition yes
states

then the only question is
how objectified
current state eg present time

Well, the question here is that in the present, as a rule
basically the number of people
It captures literally the nearest future

therefore the general stability of the present
much higher as a rule

because distant events are connected
at some probabilistic level of combination of events
well in the collective Consciousness

so if we transfer the phase of the present
from the collective level far ahead
then we will get sustainable Infinite development
simply because we mechanically just took and transferred

So the management structure is
not only working from the future
for example, to deal with current events
or go towards yourself and work on the structure

but also at some super high speed
periodically, although maybe not so often
how should this be done in relation to
to oncoming events from the current time

but watch future events
which are precisely the Infinite Eternals
and they have this characteristic

i.e. the space of Eternity
as a space that has matter
well, special levels, so to speak, of Perception
or even a reaction to your Perception

so if you look through the current
future level so to speak
to the Infinite Future
it is precisely the structure of the matter of Eternity
reacts very accurately
and very, so to speak, objectified
for all your actions

i.e. the further you strive there into Eternity
the more precisely this matter reacts
on your movements
there Thinking Actions
and as a rule, your personal image is reflected

i.e. the further you go into Eternity
the more you deal with yourself, the more you get

and then it turns out that you are bigger
well, you expand this golden phase of glow
actually looks like golden light
then you understand
that private events are also already controlled
good enough according to your personal desire level

because that's where your desire comes from
and the further you go into Infinity
the more accurate it turns out, the influence goes again
from your own desire
which is now

and it turns out that the World is basically closed
well, i.e. there is a structure of your management, i.e. you personally
and the outside world is basically in terms of control characteristics
it's no different then
with this ideology

and then it turns out that the entire structure of future events
this is simply a projective component
the outside world
and also, in fact, as if yours, so to speak
a completely controlled world, so to speak
in fact it is an element of Consciousness
which you perceive in this case as

and then it turns out that here
your part coming from you
this is your logical [...] level of Thinking

here we have come to the level
when through the logic of Thinking
simply through logical thinking
it is possible to accurately determine the structure of the future World

i.e. there is a simple task there
let's look at the region
go to a specific place
and find out what's there

from this point of view, for example, it was 2006
basically there is enough there let's say
certain ones are not so big though
comparatively small phases of instability of events
in May 2006
which is now if you work with them there
there literally two or three times a month
then in principle the events are leveled out

even if only one person works
with a structure of clear objectification
what an event

considering that each person has an objective phase
it can be different
then the managing forecast itself
it boils down to the fact that in the future
people are objectified
at some specific events

i.e. it turns out that you are considering
the structure of future events in this way
what do you see in this structure
polysemantic layering of different versions of future events

for example one person likes one thing
another to another, etc.
there sportswear like different types of clothes yes
although in general, for example, sportswear

and you get these layers of different points of view
they are such that it is precisely the difference in points of view
creates the possibility of existence
namely absolute forecast

This is where you need to be careful

from a technological point of view, it is important to identify
what exactly is the structure of a kind of other field of information
gives the possibility of existence to any creative field

if there was a mono system
it was impossible to say for sure
that there is a second system
since there is a field of the system, a field of opinion, then let's say so
polynose system

then it turns out that here
from the point of view of ideology, for example, health management, yes
so that the cell does not have polymorphism
there are people who are there, for example, inclined
and had only absolute Norm all the time
here it is enough to just fix everything
one cell in a monosystem
and the whole person will be healthy, etc.
This is actually one of the elements of treatment
through simultaneous forecasting

here is the healing of the body
through simultaneous control
this technology may differ slightly
due to simply such a linear option
for example impulse
impulse on the solved for example in the control environment
then, for example, to a person
and there is a healing effect, yes

and if you control and do at the same time
then this is direct control of matter

and here you can also control it directly
the matter of the future
as well as the physical matter of man
or there by your personal desire

here from God's point of view
if a person has done something
who cares
what is this action well as if implemented
from the point of view of an external observer
but there can be many points of view

but this action is basically like that
what at the level of equality if there a person did something with his hand

there is a personal hand movement
I thought of some idea
it can also influence the future
all desires
creative desires of man
have equal rights again

i.e. if you go out
to the level of this control structure
it turns out that it is already at the point of the future
i.e. I show it all the time now
so control so that your element of Consciousness
was in a stable future
where is all the data about the processes
both current and future and past tenses

but this information is taken from the future tense
This is where it is important to master this technology
precisely as a structure that takes into account even that

that in the future tense
Well, at some interval, yes
which means which is that point of the future

for example, I can take some element of the future
and take that one at the point for a second
which is called "before the future tense"

if it is correctly recognized in the information
then it turns out that you are actually influencing
you can go there forever
due to the simple concept of "Infinity"
as a level of large magnitude
influence the future, i.e. improve to the desired level

and this system is "before the future"
which is carried over into the present time
i.e. right now there is some element of time
in a second he is already different

i.e. if we recognize
how to manage this level at all
in front of the future element
then we have an absolute control system
above all phenomena there is Peace

and here if we really want to recognize

how does information expand in general
it spreads from this level
which is called "pre-future tense" for example Yes

then you can see it here
what develops from the point of view of logic
as a system of actions of the human physical body

if you think about it
on what issues and as a person
just does some physical actions
then from the point of view of regularity
This is based on, for example, the complete freedom of human will

but from the point of view of this kind of picture
which is before the future tense
this is the level that a person has
in fact, the Eternal source of energy
in this time interval

some Eternal source of action

because for God
that one Action for example Yes
what is Eternal
basically it's the same question

i.e. it turns out that the element, for example, of Eternal development
he's basically the same
as well as the element as if actually there
some periodic development

and based on this we can now build
exact constant in fact yes exact construction
recognition of future events
on what we install
namely periodic action

i.e. we can, due to this Perception of the period
which includes both external events and your desires
already fix specific future events

and that's when in this event
signs are occurring
which for example for the present time
have some kind of well or something like a preliminary data system

i.e. in the past you had some business
and in the current time when you recognize
that something starts to happen
which relates to an earlier problem
then the management of this situation is already
this is an accurate vision
some specific future events

and the more specific then you are already in a controlling way yes
introduce positive events
the more precisely this event is realized

then you have no need
to look for this fine line
i.e. on the principles of absolute freedom
how to make decisions all the time
so that the control is reliable and accurate

in the case when you are just already fixing
some future event
and then it's clear you just make this event yes
then there are simply no problems there at all

but in principle taking into account
that a person should always have the opportunity
make a free decision always
then it turns out that here
this is the principle of a kind of soft transition, yes
choice of solution

because the more accurately you recognize now
that at some point there, for example, there in an hour ahead
you choose one solution
then in an hour and one second the following event will occur, for example
at least even an improvement yes

then it turns out that based on this
if we have
control system
in terms of recognizing your own actions, yes
or motives of actions

i.e., for example, a car is driving at high speed
or there may be a small one
to recognize the action of the machine
it is possible on a logical level
if a person is inside the car

think that she looks like this
as he, for example, considers in terms of his Thinking
but because of the corner of the building the car may look different
for another person

here to understand what another person
the car drives like this
you need to know all versions of events
on this section of the road

what I said is a specific management training
from the point of view of building up
this phase of natural future events

i.e. naturalness can be
just as an observation
i.e. you have one of your own opinions
you need to achieve some goal
for example , buy something in the store
or implement something specific
that's often how it is precisely that some objective thing yes

although the main level of decisions and actions
is the state of the human Soul
i.e. its action according to the tasks of the Soul

and therefore, based on this
the opportunity to make a completely free decision
she is natural
this opportunity is always there
it is generally one of the fundamental principles of life
on the platform of love let's say yes
besides the fact that there is only love here initially

but freedom in decision making
this is like a driving factor
material objectified so to speak
for the action of the Soul
Peace

The soul perceives the World as an absolute substance
but the objectification of action is some kind of movement
The soul must recognize some movement
in this case it is more of a spiritual action

and this is precisely the objectification of action
looks like a task docking in many ways

and the Spirit
and Souls
and Consciousness
that's what this level of docking is
It's better to take everything and connect it at one point
and control this point

he didn't influence again yes
on the accuracy of obtaining future information
it is necessary to make the future action
coincided with the level that you are considering
what is the solution to your problem

i.e. consider
how your Soul solves, for example, one problem
Spirit
Consciousness is there
for example, how do you , so to speak, implement this action
from the point of view of the actions of the physical body, etc.

and that's when you see
solving the same problem
so to speak, many levels of your personality
then here it already arises
sustainable control predictive action
from the current time

because then you actually
transfer control to yourself
in the current tense
and the whole future becomes more fixed yes
in terms of positive elements of future developments

for example, right now it's May 2006
he doesn't pose any problems anymore
We worked there for about half an hour, for example.
let's say this taking into account the future tense

i.e. it is possible to divide control in this way
what are we doing now
and we transfer part of the time
as a level of structure that is necessary for work yes
for some action

and then if we consider
the meaning of the future action of some
as a necessity, as if realized

previous actions

for example, we didn't finish the management there
specially consciously
and left some specific minutes there
to finish managing there maybe be there in two days
but nevertheless, for example, there in a month
using these minutes yes for management

it turns out that from this point of view
from the point of view of equality of information
any future event
it's like often or some kind of associated
or there is a linear cause and effect
development of some previous situation

i.e. it turns out that the past is actually
is present in a certain way
It's clear at the logical level
for material objects there some buildings
or an element of physical quantities
elements of presence are retained

but from the point of view of the logic of the development movement
there is human Consciousness
or there are the movements of the person himself
for example, there is his physical body

here it turns out that logic itself

is also determined by Perception or the state of the process
associated with the personality at that time

then it turns out that we can have
a fairly reliable picture of the future
if we are all processes of the future
we simply accumulate as processes
and at the same time discrete
and linear

i.e. simply considering that what we see in the future
has, let's say, such a one-time character
i.e. such a signal passed and that's it
but the event, for example, may not exist

and the second option is linearity
i.e. we can observe the event

play and make a decision

so here is linearity, i.e. a longer period
event observations
it's at the same time
and management
and continuous decision making

because God makes the decision
and at the same time changes the outside world

so it is possible at this level of discreteness
and for example cause and effect
as if in an unbroken phase of management
see that decision making is now
very clearly and precisely influences the future

and the further you enter this control
the more often it is easier based on current tasks
solve the problem
Well , many of you faced this situation in your youth
all people have encountered this situation often
that are very distant tasks
they are considered to be simpler
for solution
although there may be small ones

and here is this effect
namely the transfer of the current time impulse
to Infinity
as a system of reflection Infinity
proves it once again
that man is the Infinite level of realization yes

and because if this impulse is maintained
then everything is really much simpler
than it might seem at first glance

and that's when we are at this level
we go to the management
it turns out that on a certain property of control
at the level of some technical tasks
there is , for example, a need for a person to often
do simple technical tasks
for example, how can it often be detected
and nothing else is needed

Well, he has a task, a goal, he has to achieve it and that's it.

For example Well, maybe it's not necessary
there are some spiritual aspects of knowledge
there to learn more

in principle, yes, my Teaching is structured this way
that through Macrosalvation
anyone should be able to master it very quickly
without , for example, a special trend there
which is required, for example , for reading literature books, etc.

but this is on the condition that he simply does not have the opportunity
he is doing real work there
but if he has the opportunity
It would be better if he got more education

it turns out that from the point of view of God's Action
This is how the control system is arranged in the classical version
reagent system i.e. reacts now
but which must have a tool for reaction

and the system is already analytically responsive
i.e. when there is time
for example, finding solutions and acting on the situation

so this logic is just natural logic yes
for example, from a logical point of view, it should be so

and here is the support system on those principles
that yes there is such logic that means
that's how it should be
this is another criterion
and generally speaking one of the areas of more specifically expressed
to spread the development of control clairvoyance
predictive vision
through a system of seemingly reliable factors
which you are familiar with are known as logical let's put it this way

so I just gave it as an example
what can you type
there are quite a lot of objectifying factors
which are known to you in the future and which do not change

and now if we move on to this system beyond management
then it turns out that there is a factor in the future
which basically doesn't change at all
here is a logical [...] approach to this

if there is one two there are ten million for example
that means there is some factor
which even with analysis
it does not change over time

Well, it is clear that first of all the level of the Soul of a person
he's like the root level, he's not much there, yeah
subject to some structural change even

in this case we are talking about
that in any information
there is a level that does not change at all

from God's point of view it is clear
Action of God
it is always the Action side

but from the point of view of a simply objective system
this is this unchanging constant
this is what you perceive in the future
i.e. your point of view that you have accepted
i.e. the method of Perception is like a route of Perception

what can you see there somewhere now
into some element of the terrain
what's in the future
through the structure in Consciousness
but which is in the future

here is the division
what exactly is in the future
or there in the past
already here
then there is no need to do it
because here is the principle of immutability
how to fence in information
it is realized precisely in that aspect
what do you have in the future
practically speaking, let's say that the result is good
which you have achieved more for example earlier
according to a certain technology

so as not to get fixed
on technology as such
if it is complicated or for example it is such that there is no time
to work for her there

then it turns out that what is important here
so that your Perception is like this
so that you can simply see clearly and brightly
as the events themselves
so there are mutual goals and some systems there
co-development or development of events

i.e. it turns out that the more personal goals
and from the point of view it may be long-term first of all
tasks
we introduce the structure of future events
the more accurately we can manage the future
and accordingly it is natural to recognize yes

i.e. it turns out that the control
the more accurate a person's prognostic vision is
the larger the tasks we solve

but from the point of view of civilization
if we talk about Macrosalvation
then where else there is more large-scale action there
for example Eternal development

that's exactly it let's say quite large-scale
in order to accurately see future events

i.e. a vision of future events
is also combined with that
what do you understand correctly
let's say the construction of the World
by ideological level of management

and here to recognize the ideology
in such a private applied nature
it turns out that the next level needs to be made

i.e. so to speak, for recognizing the ideological level
external environment
i.e. to what extent is this environment objectified
how positive or negative is it there
first a person must recognize
primary sign of future information

then there is a very specific numerical series
which allows

from the current time

link management to future time
and work in the current time like this
as if you were just transported there
there they extrapolated Consciousness
into the element of the future
and looked as if into the future at once

i.e. the series that makes management in the future
from the present tense
but exactly as if you were just working
passing into the future through the element of Consciousness

because these are basically different things
You also need to be able to move into the structure of the future
and work there on the structure of the future
This is of course technologically simpler
but here's how to go yes
this is again a special technology

the series that makes these actions the same
as if it approximates and makes it the same, including

then it turns out that he is next
it is desirable when you work with it
still mentally, for example, at least the first numbers of the series
pronounce
there may even be one number
at least mentally pronounce
only work on the management vision

the row is like this
7 1 9 3 7 1 8
and notice that the row is very mobile
there is always an opportunity there
take and insert some other number

but if you don't like the number for some reason
then you will do it so that in the future
negative status associated
Well, in some way it is perceived in terms of association
with the level of the number so that with these [...] it is not realized
that's all

then you can bet any number

and if you want to work situationally
at the level of body action

let's say implement the law of action of the body
in the structure of general development

then you can react quite well
on some situational things and make a decision
from the point of view of your movement there yes
i.e. the work of the physical body for example

i.e. it turns out that it is precisely a choice
freedom of choice
is regulated by this primary point of view
i.e. how much do you need it?
precise control over events
in exactly the right way

[...] a fundamental thing
i.e. how much is needed
this or that method
how tiring is it
how acceptable is it to you?

i.e. therefore the next factor
precise control clairvoyance
is an opportunity to find for yourself
optimal, i.e. more comfortable, so to speak, yes
control method
which would be so harmonious
that you wouldn't feel the need to so to speak
additional work

what is your natural state of the current
calmly transferred to the management of the future
you're just looking to the future
as for a good story that you need
also for the whole civilization
for example for the Eternal development of civilization

or even not history but what will happen in the future
and you can fold it any way you want
but your condition is not overstrained
and generally speaking it is not excluded at all
for good health condition at the current time
but at the same time it should be here
absolutely precise level of exit into the future
and managing the future like that
as if you could move and control something with your hands
i.e. the perfect level, for example, can be here

and now you are based on this technology
work hard
in such a state of control

I will work with you

it is desirable to work
precisely by individual events
and in general in any information
maybe it doesn't mean information specifically
private task level

Now we need to determine that state
when you are in real time
constantly manage future events
naturally, of course

it's just that maybe you didn't pay attention
such subtlety or it wasn't necessary at all
look at it from this point of view

because there can be a lot of technologies
and each point of view is, in general, equivalent
and come to her, for example, in a special way
It's better not to necessarily come
maybe it was enough that before yes

you did it for example but here is the possibility
constantly come to a new point of view
to find the next level of control
this is an important possibility that needs to be taken into account for example
and implement it if possible

i.e. to make it so that it is implemented
that Reality
which you need the most, as if closest yes
Well, in general, such training can be considered there
what is the closest situation
which or concerns the neighbor
or somehow a person perceives it that way

i.e. the concept of "closeness at the level of physical action"

pay attention here
the term "closest situation to a person"
when at the level of action it is a specific place

movements towards a person

and therefore, based on this
we can quite precisely do the following control
what if for example we are considering
structure, for example, there
some further prolonged events
in a person's life
where he carries out Thinking there is a logical type
by the structure of future events

then it is clear that the logic of Thinking is a specific place
where you think through some situation
and the situation begins to develop accordingly
with the fact that you simultaneously take control
as a system of future decisions

i.e. if you go into it deeper
there you can see the solution by the structure
in this case i'm talking about
that it is enough to think about complex tasks, for example
it is possible at a certain distance from yourself
at a certain point in space yes
for example, there the distance is 25-30 centimeters

then you can define the area
where complex problems are solved, for example, yes

if we want to solve simpler problems
or there are more cheerful, joyful ones , whatever you want
then you need to, for example, there
transmit Thought to another point
closer to yourself

i.e. the joyful good is closer yes
although difficult things can also be joyful
with a good decision

it turns out that based on this
you can simply configure Reality
i.e. moving the control level
near the physical body
we can quite identify
some one point again
which always seems to exist latently

a person perceives signals from it

perceives some information
but for example he doesn't reveal it

some thoughts come to a person
but he may not reveal this point

then as soon as we move on
to the task of objectifying this point
actually some point
which constantly informs a person
about some future events
in general, this is how it sounds in your own words

although this idea does not fully correspond
all aspects there in this area, but at first it was uncertain

but in principle the information comes from somewhere
it comes from somewhere
we are now coming to that
that you also need to be able to take the sources of information

i.e. where is it located at all
there is an area that is not defined
and what to do with it
what if there is some useful information there

about how information changes in general
everything that a person perceives
in a radical way, for example Yes

and it turns out that we will say well if it comes down to it
here every person has
are there any principles of your own on the platform, for example?
which allows in some way
regulate this area

i.e. if he is not a technologist
he may use some superstitions
or some other principles

someone uses it just maybe
some point of view
there one of the points of view could be like this
that there, for example, a person sees a dream
i.e. an undefined level of information

the easiest way to count

that good information in dreams comes true
and if negative then in a dream [...] you flip it over
and especially not to do this

i.e. sleep ^{can} be used as information
but use some template and

and just engage in a radical level of the source
what is Reality worth anyway
behind a dream behind an action behind an event
where does this informative environment come from?
which feeds
in fact, the action and development of man

and that's when you start
contact this environment more
then it is clear that it exists
source of information
Well, let 's say it looks more like ^{this}
to some sound wave
which, ^{for example,} is absorbed , let's say so
into the physical body of a person

purely so conditionally, in reality it looks like this
that information interacts
and indeed such an element occurs
that there is interaction
information begins ^{to} dissipate
by primary impulse

but that's how it is in life
primary impulse
then there is something else going on there
mixing of information, dispersion, overgrowth, flow

and so if we decided to highlight
one impulse that does not change at all
then we will have to concentrate our will
and keep it in the concentration phase
at the level of attention and darkness ^{yes} in control

which is what is done during concentration
we are fixing the impulse
and we create the residence time of this impulse
for some time now in the system of universal communications

i.e. the more accurately we define

field of universal connections
the more accurately we can get it
implementation [...] and faster
well, that is, if we also want to speed up time there, for example

or we need the exact time for example Yes
then in principle there is a situation
when there is a plane from one point to another
must arrive there at the appointed time

then you'll have to work with time
or similar to this situation there are many different ones

but here is work with time mainly
because when a person works at a natural level
everything is going well for him there
he doesn't constantly set himself temporary tasks
which, for example, are difficult to implement

it mostly works naturally
if he goes somewhere to meet
he plans his time in advance
or something perceives in time calmly yes

it turns out
that for calm Perception and calm management
more work is produced
through the event as if perceiving such a line
so let's say bodies
Souls of man

and here is this source
begins to visualize
i.e. the event begins to form immediately
how is information generated from a series of events

and further if we move on to these events
it is clear that information comes from them
to you until the first actual wave in Perception

i.e. the human body
the person himself as a whole
it turns out that it interacts with events earlier
how does he get information
logically it's also understandable
that interaction always occurs continuously
and then it turns out that earlier

but when he gets the information
then here is the regulation of this information
while it's happening at all

who is interfering there
some of your desires may not be constructive, for example

if you realize Salvation
resistance begins
then here we come to that
which is a very simple level of control
and very effective
in that simple case
that we are simply identifying interested parties
already at the level of viewing the situation

this is what is called there "clairvoyance"
Spiritual vision, etc.

predictive vision
where we identify sources
which we can logically calculate
that they are interested , for example

there is a simple example for example
the train is moving, it may be delayed somewhere
if someone doesn't want him to get there on time yes
for example , at the beginning of some station he took and detained
it is logically clear that he has nothing [...]

but from the point of view of Macro-creation
if he doesn't do anything particularly bad there
detain you there [...]
and then it turns out that the element of controllability of the system
is precisely the postulate of creation again

if we are from the point of view of destructive systems
we are approaching
then it's like there 's no control element at all
in terms of docking with a future event
all local closed system is obtained

and here is the expansion of the factor of influence
expansion of the system of further actions
for example there in Infinity
leads to the fact that we can consider

structure for receiving future events
as a structure that simultaneously takes into account
as I said here today
elements of some event structures
towards the developing Eternity
which develop into the structure of Eternity
as if by themselves
and at the same time it is
and information
and action

then the control phases
which actually means react
as if on the situation in this way
that you perceive some information

Well, if you think about it at all
deep roots
if it is possible to express them as deep roots
Well, after all, it is precisely Perception control

than in this case
with predictive systems, here through the future
a person perceives and how
from the point of view of cellular systems
from the point of view of the state of the Soul
what does the Soul and physical body look like
on information in this case

i.e. how does the volume of information work
which corresponds to the physical body
and where is it located

and how the Soul works

i.e. if we start to consider such a level
it turns out that we are starting to understand
not only there in the essence of obtaining information ^{yes}
but we must know the essence of objectification of information
from a personal point of view
body structure
Souls
Consciousness
Spirit
i.e. to control all processes simultaneously
appropriate to the person

and this is the same thing that God always does
He always controls all processes for a person.
then it turns out that it is absolutely clear to God
that for a person everything is Macro-creative
and the correct ideology of development
he lives forever and in this case it is elementary

i.e. you just need to know the following events
and it turns out that for God
it's like, well, let's say, a well-known path, yes
there is no difficulty in transferring it to a person in principle
if a person wants, for example

but by and large there are no difficulties at all
because it is easier to transmit the creative system
and forecasting the future
from the point of view of Macro-creation
creative system

it turns out that in the system of knowledge of future events
for example, according to logic [...]
there are no problems at all
i.e. there are no restrictions there
there are always accurate and reliable events
which happen with any creative decision you make

so there is a level that says that
that any creative decision of yours
and a specific line of events
the solution is absolutely clear

then with a certain amount of work practice, let's say so
with this control mechanism
with this level of action it is [...]

you can do it once without any problems
well how does it work here if once
we will take this line and start implementing it

then it just appears first
super-fast some characteristics
there is a compression of words of events of some phenomena of Reality

and then the second time [...] the system is more stable
the third time she becomes
as a household level of control
you just gained direct experience yes

and it turns out that this is the accumulation of experience
this is a very important value, you can't make a mistake here
as such the concept of "error"
in principle no there is always action yes

but precisely from the point of view of the linear logic of events
so that it is not there on a physical level
errors that you can perceive as an error

what is important here is that your element
worked at the level
that there should be no mistakes in the first place
that means they can't be there, for example
such information can be entered
and this is to be implemented in management

and then any, so to speak, super clear vision
manager and type
that your impulse is always beneficial

this vision can be obtained then
at the level of actual co-development then
information of your body
with information about the whole real surrounding world

i.e. you are monitoring the sphere of information
which corresponds to your physical body
and at the same time, as if with peripheral vision
or even often technologically it can be used
just vision coming from the other eye

and it's better to do it this way
perceive your information about yourself
with all elements of ourselves, so to speak, yes
your own information

i.e. you kind of lead and feel an inseparable connection
between the physical body
and this information
about you

and there with the vision of the right eye, well, with hidden vision
i.e. what is called "controlling vision"
you are in control
all objects there for example there of the physical World

considering that man is like a structure of Eternity
may be located in the structure of the Eternal
at a completely different level of management

then it turns out that here
more elements of the material system
i.e. you can see exactly
there is a house event transport

but to see a person for sure
agree with him in advance
agree that his Soul agrees
for example, there to perceive you at the level of contact
i.e. the same contact occurs
to just see yes [...] in physical communication

but this is except for those cases when it comes to
about the negative pressure level for example on you yes
some negative version of a negative personality

then it turns out that here, by the way, it is very clearly visible
as far as practically one hundred percent there
the person is protected in the current time
because external if it is a negative action
it may not pass at all

i.e. it is enough just not to accept it, it turns out yes
it is correct not to accept
not to do something
which, for example, you don't need
then there must be internal stability in management

and based on this, internal stability
regulated by some experience some knowledge
what exactly to do
are you doing it right for example

because if you know what you're doing right
then the future is absolutely certain
as the level you implement
as a system of obviously correct actions yes

and without quotes and in quotes
because as I said "not the right action" as such
maybe not, it all depends on your point of view
in relation to oneself or other people

there is development as far as one can tell
that it is right or wrong
Well [...] from the point of view here there are generally many questions

from a practical point of view
It's always easier if the diagnostics are correct
or it could be some kind of prognostic
but correctness is defined quite clearly
if [...] then they should match the plane , for example
with some technical thing

if we are talking about the structure of contact with the individual
see a person who is near you
at that time

then the easiest thing here is logical
important technological trick
see first the structure of this person's Thinking
in integration with oneself
i.e. its purpose

why is he in that place
from the point of view of some internal goals
which may not concern you
there is some kind of personal plan of his
he doesn't really need to be saved there
but you still have to be able to see

then it turns out that you should watch
to carry out those of his tasks
well, with which you, for example , agree
Well, there is the task of Saving the World
the task there is environmental safety

in his future stand out
fragments of creative elements
generally understood publicly available
and through this structure the physical image is determined

then it turns out that you can
also identify those people
which are initially simply absolutely creative
and you can just see them in the future
as people who will appear there on a personal level
and you can communicate with them there, for example
or do you know that they will already be
can you somehow perceive information more broadly

here, notice that the information is becoming broader
when in the future you begin to perceive
a person exactly

you can look at any number of buildings
or to the whole world at once
in terms of, let's say, some kind of material
not of a material plane

so here is a narrow level of Perception
which characterizes
elements, for example, buildings, terrain, etc.

but you just have to set the task
Perceptions of at least one person
the structure of your Consciousness instantly expands
to Infinity
[...] the impulse of transition to Infinity

so it's clear
that God created a place for himself in peace
where He can always be

i.e. in a person's Perception instantly
transfers to the Infinite phase
to God himself
and it turns out that God is at peace
in the place where He wants

but then God really needs it
so that a person is absolutely free
i.e. it turns out that he should then
practically proceed from that
that complete freedom of will of man
gives exact guarantees to God
that he and any other person in general
they will find a place for themselves that does not depend on
for example, from the will of another person there
even if this will is there for example well that's good
but man has the right to choose the creative level
absolutely clearly only at your own discretion

and that's when we start to look at this line
then it turns out that it already opens here
absolute, so to speak, clairvoyant control
absolute vision

in the structure and interpersonal relationships of fragments of future

because analytics is one thing
what is happening now between people for example
or happened in the past

and another thing is that in the future information
I can change radically
or be different in principle

although it may be [...] on the contrary more stable
from the point of view of the current version of events

because it works out
control the Thinking system
which even in the current time
there for example in case it is not creative
requires not to specifically define it yes
on Thought Control
then it turns out that in the future
the issue of controlling situations that may not be realized
let it be clear that even at any physical level
a person can make a decision

then at the level of Thinking
he can even more easily accept it there
An infinite number of solutions
the speeds there are simply very high
and the sounds seem to even stick together, yes
what's in the structure there
that can think of ten sentences from one sound

and it turns out that based on this
we must be very clear
nevertheless, yes, the NVS has a very simple task
regardless of any possible situations
we must know exactly
if there is any possible
Well, maybe there is an extreme move there
then you can know clearly
what will a person do
not what he thinks there even
It's not that he can think one thing and do something completely different

and it turns out that this is the structure of connections
between Thinking
this is the fine line that defines

the fundamental root of any event anyway

let's say the structure of connections with Thinking and its action
this is what defines
his personal information level
human
what he perceives himself
and what is the motive behind his actions
external situation
and what we perceive

as I said there is a level that is perceived
as a source of information
it is not always clearly defined
this level exists in the future too

if you look there
how can two people be similar there
or different yes for example at the level of physical data
some social conditions matters

here it turns out that there is a level
which is practically from the point of view there
human development environment
or habitats of other animals there
I mean there are cats dogs wild animals
this structure does not change at all in humans

and the only difference or distinction that can be made is in that
perceives things differently
some kind of inner impulse
for example, there is the structure of molecules

i.e. he can perceive the external system
absolutely identical
the same structure of connections
can perceive equally
there we will say the form is mathematical
it can be perceived equally

but the difference is that you need to pay attention to it
on [...] composition I would say there is health, etc.
in one way
different in a different way

i.e. a person begins to recognize

at the level of some intuition
that the perception is different and the person is different ^{yes}
not the one that was standing there in some place
he is completely different

i.e. the ability to recognize by the difference
another person
in a certain place

and that's when you are already from the point of view of this management
go to the systemic level of connections

for example for God
that he is different
that he is, for example, the same person
in some other place
from the point of view of its events
it's an equal task
the task of ensuring its Eternal development

and here is this equal task
allows God to control absolutely everything

it turns out that there is enough information

which exist both externally and internally
combine into a substructure of one task
for example there is the Eternal Development of Man

as I said, the means can be different
as external
and as a system of internal knowledge

then it turns out that we have
Absolutely accurate perception
maybe even for a moment, for a second

This means we see everything that happens to a person.
precisely in the Macro-creative plan

please note that I only give that technology
which in itself already guides a person
on Macro-creative processes

and everything is already improving for him
in relation to what was before the start of the analysis
for this management process

i.e. as soon as we begin to develop this process

for example, in the system of Infinite Development

then it turns out that based on this

we can see

all Infinite development is completely specific

i.e. you can see what is happening in Infinity

can be seen

what are the connections between the Infinite elements

with a person specifically

i.e. how can we say to ourselves *yes* to installing the system of Eternal development

some kind of *distant* problems in space

control systems that are such

what you can consider

its action there

and then simply at the level of some kind of structural control

certain constructor work

simply from elements of future events

you start to dial the system of all connections

and it turns out that based on this

you can already build a completely concrete future

sustainable

being in the current time

and then in principle

a system of some peripheral events

some of those events may not be so relevant

this system is such that you don't need

it is precisely on them that attention should be focused

and then you basically don't need to pay attention to it

in general, people act like that

they don't pay attention there

to some peripheral

there may be minor events there

it means a person always sees something significant

so that's the logic

then what does he consider important for himself in the future

well, in terms of some postulates

there are some obligatory *daval* *yes* the person has

then it turns out that here

this is what is significant behind the deeds

allows a person in such a natural way, so to speak
perceive
the entire future system of events

but then you have to have this certain driving force
in relation to a person
what lies behind a certain level of events
exactly those means that a person associates
how can it be serious enough for him

this power is also a certain level of information
which kind of feeds
structure your own events
everything rests on something

if there is a task
it means there is some source
which should form the task
somewhere

then it turns out that based on this
we can see quite clearly
How else can there be such a situation in management?
what besides external and internal systems
which is needed by the person himself
and uniting, for example, more into the structure of prognostics
for example without merging
everything that is material without any tension
somewhere [...] at the same time a meter from a person

if we start to unite
we see there at a hundred kilometers per million and so on yes

but if we unite again
that in relation to an external object of information
there is the same technology
they got the information from somewhere

then we can see
all events at once
i.e. multidimensional opinion or even vision
this is the level that allows
perceive simultaneously
all aspects of information
and at the same time at one of the levels of implementation
there may not even be any dimensions in the plan

it's more about the form of information

but we believe that it is precisely this multidimensionality
and inside one of the systems
linearly just do something
in the form of some physical level tasks

so when a person
but so does God
He sees at the same time
and that's all
and private ^{yes}
in management

then if you do it this way
then it turns out that you begin to see
not only the physical world
not only there the implementation of their tasks
how can this be done better, faster ^{for example} , or more efficiently

but also what does God want for you
what does he want to teach you ^{yes}
what to warn about
we need to get around there somehow in advance, maybe it would be better

i.e. this external point of view
where God's point of view is taken into account as well
as any other equivalent information

the entire system of creative information is meant
it is mutually equal
then it turns out that the main thing here is
highlighting the structure of God's Action
what exactly comes from God on an equal principle

but then another effect works too
what when God's information
it is equivalent
works on all
This means you can always meet her anywhere
it is as if it is rarefied, scattered and exists everywhere, it turns out

and when we begin to implement this point of view
then this is the controlling clairvoyance controlling vision
will be revealed in that status
what do you see
what does God give you

and it turns out that then you can say so
having spoken with God, i.e. having made contact
get a favorable level of events for yourself
and then, in principle, the task of management is only that
to withstand this level, i.e. its Perception
consider it implemented
that it came true at all
in the form of this contact with God

but if we consider this level as management
then this is also quite effective
you just have to do it right
the structure of interaction with God
express
as a structure of interaction
just to solve common problems
for example Eternal development
or your private tasks

because for God there is no difference
socialized tasks or only personal tasks

and the structure of this selection
this is the level of a private task
contact only with God
this is the most powerful mechanism and healing there
and of course here also as a mechanism
definitions of positive events
which are given by God
as positive events
deduced, so to speak, as a result
your correct treatment
there, well, for the better, for example, of certain events

and in principle if we start
do management this way
that we approach it from different positions
to the structure of the remote so to speak management plan
i.e. with different methodological systems

then further along the structure of Eternity
you begin to see that in principle
being on such
Well as if on a fundamental deep level of a person
the same one on which it is located
your physical body or close to it

the level of communication is the same as the level of action
physical body
Souls
Spirit
Consciousness
and all aspects of personality in the present tense

it happens as soon as you start
approach such a state in the future
then you already see it clearly
all events in a controlled manner

i.e. when you come to this position
Firstly, they have already managed
and if there is any negative information
then maybe you can ^{in general}
to God any number of times
to the initial level of management if you want

and manage
until stability means this moment
and then you start to visualize
moment
at the level of further technologies of action
i.e. you objectify for yourself for people, etc.

and that's when we start
^{for example,} to make this type of control
what can we ^{say} we can consider
in principle, any kind of control object
he is in the current time
if there is a person next to him

then we begin
^{Well let's assume} the object of control is somehow
there ^{let's assume} we take a dictaphone, move it, and examine it
the task of his essence there
structures of events in the future
then in principle it remains a dictaphone

and here is the structure of the transfer
here is some image matrix
from the primary level
this is what ^{kind of} creates the image
i.e. creates, ^{for example,} information creating a dictaphone ^{yes}
information that creates some element of Reality

and that's when you start to pick up on this information
then it turns out you can see
how a person creates himself

There is such a level, also very developed
in terms of interaction with
Well, specifically with the Infinite level of control
with Eternal Reality

and then as soon as you consider the status
as a status well at the same time so to speak prolonged
in Infinite Action

it turns out that it is an element of self-creation
is just beginning to be available to you
he immediately receives your Perception element
this element has all the best that can be
from the point of view of logic and the recreation of a similar system there

i.e. God who created , let's say, even the first man
created practically
unlimited system of Eternal development

but God could only create the Eternal
Eternal man
He Himself is Eternal
He uses only the tool that He has .
instrument of eternity

and it turns out that as soon as we start
these elements are in control
perceive as systems so to speak
further there the next determining action
delve into the essence of interaction with God

the essence of even personal tasks arises
the following personal tasks
consider from an angle
that we know the essential characteristics
why does this happen at all? should it happen?

then, in principle, from the point of view of managing future processes
we then have a fairly advanced mechanism
influence on the system of predictive knowledge of their own

where is the system of influence it can always be like this
that you can adjust your knowledge at any time

and in the current time always get
the information you need
in the form of, for example, how to act
in the form of what information to receive

i.e. it turns out that the controllability of future events
especially the future of the controlled
the more characteristics of information in the future
you have

i.e. here is such a simple principle
be able to obtain information
from the future to transfer there from the current time
be able to work in a comprehensive manner
creates a very wide range of control

and that's when you start this spectrum
especially specially
when you do the tasks of Eternal Development
develop

then you will detail it
get a structure of detailed events

and then you can clearly say
what, yes, you see a specific event
you have studied all the factors

in principle, for example , today's seminar is sufficient
to take into account all factors
see
like ordinary objects of Reality
also people for example Yes
all events in a complex

You can take other lectures too
You can apply your personal experience
but in principle, if you know correctly
management structure
try to perceive it more accurately remember work through it

then you can have
absolutely accurate Perception not modified in any way
exactly the same as you have in physical Reality

for Eternal development
this is a very necessary factor often

Well, in any case, it is very necessary
if you do this more often
literally means predicted
day or month and compare with any events
gaining practice by working with specific quantities
what for Eternal development
I need to develop my personal practice
to absolutely precise coordinates
which you personally are confident in

let it be may be
not a specific, not a private event
but are you personally sure?
in methodology, at least in approach
and the specifics are simply a reference point
which will help you

This is where I end today's seminar.

Thank you very much for your attention
