

GRIGORY GRABOVOY
The Teaching about God
Formation of a single control impulse
15.04.2005

The topic of my seminar today
this is my Teaching about God
Formation of a single control impulse

In this topic I show how
integrated management system
which is revealed in the form of optics
for example action or perception
bring to a single center
and having formed this center
to actually consider management complete

i.e. in this case the formation of the impulse itself
this is already an action on the essence of the question, so to speak

and in connection with the fact that
such a formulation of the problem is set
as a structure simply actually forming

here you have to be careful from that point of view
that practically at the moment of impulse formation
we solve the problem ^{itself}

i.e. as soon as the impulse is a single control impulse
actually a task
stops forming
the problem is solved at this moment

and so if ^{well} let's say in a more sometimes familiar system
normal management man does management
^{as if} from myself
and by means of volitional concentration transfers control
for example, to some target

then in this case we do
a certain, ^{as it were,} collective level of management
and due to the fact that this level
actually adds up
from separate different impulses

Here we need to look at the accuracy of the trajectory

i.e. we must understand very clearly
how we generally build each trajectory

as control optics
connected to the real environment yes
with real events

and in connection with this
the controllability of this technology is such
that you should see absolutely clearly
as each individual optical element
related to the situation in general
and how do you influence this situation
at the moment of formation of this impulse

those. having set the task
in one impulse to make complex management
you will have to actually follow the entire
at the level of this task
each as an elementary private event
as well as the system of general relationships

but in the system of general relationships
it turns out that here again
the structure of the community is embedded in this technology
inside a private impulse

because we need to watch
for specific events
then we must see
general management implementation system
actually inside the system

for example how does God do it
from the point of view of well let's assume human constructions

revealed in Infinite Level
Human
also manifested well let's say yes with our physical body
internal state
you could even say that with internal organs

and it turns out that based on this control system
we can see it quite clearly
this is the task, so to speak, of constructing such management

when originally the Eternal Man
he begins to realize the structure of his Eternity

i.e. in this case the primary impulse ^{is yes}
primary control system where he is originally Eternal
all his further actions
look like a system of implementation

i.e. coming to oneself to the Eternal is obtained

and if we, ^{for example}, begin to translate this system
on the structure of any impulse ^{there} of any event
then we are in any other environment
be it this or some molecule
either there is an atom or some kind of Macroenvironment, ^{for example}, the
Earth, ^{yes}
a large array of information
in the material sense

then in any case we see that these systems
that's how they are formed, ^{as it were}, according to the internal content
that the entire external control system
it is also a product of the activity ^{of any system}

and if by analogy with how a person does
we are starting to consider
internal content
what is inside the system

then we see that the deeper we penetrate
inside the system
the more so ^{that it actually becomes} more systemic and controllable
the level of external control over the system becomes

i.e. in the pulse generation system
except for the axiom I mentioned
what is inside
more specific more general magnitude of events

^{for example} all Macro Events are inside
of this control impulse

and in addition we also have
quite active external control
in dynamics
if we penetrate
^{as if} into the internal structure of events

and it turns out that the dynamics themselves
here is the tracking
some specific situations so to speak
often does not require it in a particular case
some specific details

because even if we consider it from the point of view
for example the structures of Spiritual vision
situations
then track any private event
it's still the same as watching
to some situation on the physical plane
and here is the "fence" of this information about some situation
this is also time, yes

and if we talk about what we need there, for example
instantly cure a person in this situation
or do some immediate action
at the expense of its own levels

even if, for example, a person
Well, he doesn't respond at all and he doesn't know what's going on
in his treatment for example
and sometimes the task is that this needs to be done
if it is a nuclear power plant, many people are connected with it, etc.
and the safety of people depends on his health condition yes For example

then it turns out we are forced to have
that conceptual model
when a person is alive and well in any case

and here it means we must all internal systems
internal
management as if yes internal
autonomous if area
it is precisely within this area
we are looking at management
also all external connections are stabilized

so it turns out that we can often have tasks
which generally relate to system-level tasks

a person who has Eternal development
he still has to regardless of age
in any situation yes
regardless of the structure of understanding of Reality

be in the real phase of Eternal development

no event can

for example, translate it somehow

into an unstable governance structure

and in connection with this it turns out

what level for example overcoming

some extreme situations

this is one of the segments of the simple structure of Eternal development

it is simply assumed in Eternal Development

It is generally believed that initially these very situations

they just don't come close

i.e. at the same level of the technological moment

this is a different level of ideology in general

i.e. in the Eternal development of extreme systems

they should not come near

so as not to overload it once again , yes

a system of even and balanced development

but on the other hand the methodological mechanism is the same

and from the point of view of logic

and it turns out that there is another one

next level of management

for example, how is the treatment of complex diseases

This is the level when any systems

have the same, as it were, characteristic of action

i.e. a universal system

this means that when this primary impulse is formed

we have to go through

as a level of consideration within a particular task

general

for example the level of Macrosalvation

then output to the dynamic system

and from all this and with all the additional conditions

the formation of a universal impulse in general as such

i.e. in any action he is this level

works the same

for example, a person looks at some system
Well there with physical vision yes
to any element of the physical environment
he internally believes that he perceives everything
at the same universal level of Perception
well which is called for example there with physical sight

and this is the level we get
well, which is like a kind of receptor there
allows us to draw a conclusion about that
that all elements
go through a kind of level
as if well, some kind of canonical matrix
and you can differentiate objects

then if you think about it
how is the differentiation of objects in general
is happening
except through a complex system
Well there For example there are no physical connections there

then there is a level of differentiation of objects
from the point of view of that
what if God for example does the management
and He creates everything at once
then He must at the same time
quality yes create management
as in the external environment
so in the system of Perceptions

i.e. for God there is this border yes For example
that there is some kind of peculiar thing going on
conversion system
or there are conversions
image
then the image enters Perception

for God this process is actually the same
He must create, as it were, management everywhere anew.
as in the structure of human perception
and in the external environment

it turns out from God's point of view
the formation of this single impulse

this is actually to do so
so that there would simply be a minimum amount of distortion
so that they don't exist at all , ideally

i.e. in this case any system of Perception
well well For example there is human vision
is being considered
as a system of absence of distortions, firstly
and secondly, the translation system
a certain concept
to some other environment
for example in the structure of Thinking

and why, for example , did God need it
It is precisely this mechanism that needs to be implemented

but the thing is that here is the translation
external environment
into the structure of Thinking
through the indicated signs

creates in fact the tissue of the physical body

if you look closely at this issue
from the point of view of interaction
and consider that the fabric can be created
naturally not only in this way but also in any other way
by simply reproducing Thinking there
or products of Thinking
due to Spiritual Perception

that is exactly the translation
information from the external environment
for example, into a thought form
this is the mechanism that is most easily explained
and most indicative

it means that when a person creates
its own structure
then it happens to him right away
transfer of knowledge to another person yes
about body structure for example yes
or about the technologies of Eternal development

and this is the moment he reminds of
the very moment of creation
when god created another man

then He had some point in time to
well from the point of view of human understanding
to create it as if instantly yes it works

for example, why in matters of resurrection
resurrection often happens almost instantly
but for example , the period of the meeting sometimes gets longer

because here
it is precisely the structure of human realization in this World
This structure is both external and internal
i.e. a person must include all systems
and dynamic
and local private
and general

it turns out
that then results in one element
that a person always exists yes
it is always in its original state
here in a state of sort of primary form

because when I talk about that
what we have to form
precisely the single impulse of control
in this case I'm saying that in the control system
the physical body is also included
we can look at the issue this way

and it turns out that the level of "collection" is yes actually
well in quotes maybe sometimes directly
realization of the physical body
construction
it is part of the subsystem

i.e. we translate in this way
human body
there well yes , mine for example, you can translate
or who are you treating?
in the event management system
you can even look at your body
in this autonomous system

the only thing to consider is this
so that when you approach in Perception

you should have the same body size
i.e. no need to minimize, no need to count
that you work in a small space
Means as if you were working with a small figure

in fact you should perceive
always its size and volume
it just makes it easier to manage

and when you mean move inside
this for example spherical system let's say so
then all connections are immediately defined very clearly
your body
or your thought having the form of a body
or there is your Spiritual state having
again the shape of the human physical body
and all connections

thus, according to the canon of the physical body
you can measure and examine
almost all systems of interaction
that come to you
why does a manager choose a particular position
For example Well first of all
in some other queue

p it turns out that this can be considered
why is this happening
in this model it is absolutely correct

the closer to the physical body
signal
the more intense the conversion system is
external information
information from the external environment, so to speak

and into the body structure

the deeper we go into management
the more precisely it is visible or absolutely and clearly visible
that the deeper, so to speak, the mechanism of the body's organization
through this system
the faster a person makes a decision
to deal with this particular problem

then any problem

is in the essence of man first of all
and secondly it turns out that he
a person always makes the right decision
logically he makes only those decisions
which are necessary
from the point of view of objectified processes
to implement

i.e. putting it all together
it cannot be said that any thought arises by chance
and track the reaction on the body

any solution
the solution is fundamental

when a person starts to go out further
from the management level
into the system of consequences
then here already particularities arise yes
and the decision making system

and it turns out
God gave absolute freedom to man
precisely in the structure
when every one of his only choices
precisely from the point of view of Macro-creation
naturally there is just creation
and it is correct

i.e. simply the structure of creation is the correct position
inside it, well, a person can, well to be in general
absolutely free

it means absolute freedom
in the structure of creation, yes
Here you can see this model

and when this sphere begins to expand
then any inner meaning
this is the external meaning
washed away the personality
this is how a person begins to gain knowledge

and when for example we see
what exactly does this knowledge entail?
it could be an image of some person there

it could be some action ^{there} region

then it is clear that the image of a person
he is actually in this place all the time
i.e. well as if so let's say there is an ancient original
some kind of relic memory, ^{so to speak} Yes
the very beginning

what is it perceived as
like what was here all the time
there is simply a movement ^{of} the physical body
around
at the level of information of this image

i.e. you can see the level
when any external image of a person
this is the central part
a person perceiving another person
in this coordinate system it is precisely the single impulse
as a central level of control

and when is he
because he perceives
as well as his own position

how can you perceive the center ^{yes}
only by perceiving that the other person is also a center
and this one will be correct in Perception

then it turns out that this center can be mastered
informational in terms of help there even
some of them might not be so fast there, ^{yes}

a person needs

then it needs to be near this center
make some dynamic movements
i.e. consider the structure of your information
and receive from external control

and it turns out that then you comprehend even more
the structure of your ^{well let's say so} there is no stable condition ^{there}
that's why the more they practice in management
the more he gets
^{actually} due to my own experience
solving one's own problems

i.e. there is no concept that he is wasting resources there
or is it unfavorable for him
in this case it is clear that this is absolutely not the case
that the more he works
the more optimally he solves
all your next situations

God also acts
For Him, after all, every next situation
for the World ^{in general}
she can always be better
because the number of events increases

but ^{in general} it increases first of all
in this technology it is visible
namely positive creative events

and if there are any negative systems
are starting to develop
then they usually have an initially private character
only if you let them go too far there
in development ^{yes}
then negative ones are possible
there are some more complex elements there, more massive

and it turns out that this is precisely the level of creation
when we consider as a system of action
in this control impulse
then in a single impulse
creation system
looks like some kind of ^{guiding road}
within which we must work clearly
from the point of view of control over forecast systems

because you can put a structure of creation
and naturally it is clear that this will always lead
to a positive level

but for ^{example} if we take
some scientific directions , etc.
then here we still need to always clearly follow
what it brings to society
^{for example,} this or that system of actions

i.e. it turns out that we must clearly follow

result of action

for example there is a Spiritual principle
a person works in this principle
he is always Macro-creative
when in the material level
for example control
for scientific instrument-type technologies, etc.

then it turns out that it is absolutely necessary to know
the future is completely transparent

and here is the next aspect yes
next axiom of action
in the construction of a single unified control impulse
this is clear knowledge down to the technological parameters
some future processes

if it's technology, then right down to the device
if this event means detailing
connections events there
with some basic elements of the given event, etc.

and when we start setting such a task
namely full detailing
i.e. the ability to detail
the ability to connect, generalize, etc.

it turns out that the person himself
at the moment well let's say self-assembly let's say so Yes
he actually plans the places
where it is dispersed or somehow formed
specific information
which concerns his specific problem

i.e. in this case it was this control that was revealed
that here in a single impulse of control
we see

that a person actually first forms for himself
the task at an earlier level

then he himself sets up the control system
to solve the problem

and that's when we start thinking
but why did he initially set the task that way?

after all, no one influences a person, right?
God created him and then he is free

but even in the process of creation He is free

here is a very big status in action yes
so if you take and compare
here is the process of self-recreation and self-organization
self-creation of God and man there

and now take it and watch
what's the difference anyway
when God recreates himself and when man, for example,

so it turns out that God has another task
create a man
that means Well, logically it's clear right away, yes

and then we get this line connection
Well, how can you compare it if it's so completely
at such a model level
as some umbilical cord connects yes
this is when a child is born

then this is the level
this is the connection
it is not external of course yes
but inside a person

i.e. a person has
so let's say an additional element
which God originally gave him
and which is inside this person
this is the connection

i.e. this element is obtained
what is the difference between it and everything else that surrounds a person
that it was created as if before
before the creation of man
and we begin
exactly all in all understanding

For example there in the physical including

and we are starting to approach the level
where is some platform there is information
where the Soul of man is directly created

where time seems to have the following course
i.e. including the reverse stroke

and when we start considering this option
it is precisely the formation of a single control impulse
naturally you need to be able to vary the time

you can work here on the structure
suspension of time and development of events
all over the world, by the way
means or increase

and the management structure is like this
that when we start working
exactly, well, like with the wheel of time, so to speak
in a subjective-objectivized understanding
because there is an influence on time here
this is the influence on concrete matter through this technology

then it is possible, for example, quite effectively
treat generally complex diseases
which have some maybe
genetic nature sometimes or hereditary
if such diseases exist
here in the control field and here some local
in action

what is meant is that it could be like this
that you work with the primary impulse
and the disease is cured
not because you work
over this particular disease
because you just know the control system

and if it already exists
i.e. introduced i.e. you have a task to cure someone there
and this person has, for example, some problems
which may relate to a longer period of time
not necessarily genetic
may be severe chronic with multiple relapses, etc.

then it turns out that you have to sort of restructure
the system of future events yes let's say so
on a long platform

and then in principle
there is no fundamental difference at all

in the treatment of diseases
there is some kind of management structure
from a management point of view it's just management

has practically no meaning
specifically for universal control
what is the nature
the main thing is the array of information

is there a genetic basis or not
maybe this is a fairly conditional level
the concept of "basis" from the point of view of genetics there
exactly what, how much is involved, yes, exactly the genetic level

i.e. here it is necessary to constantly output control
to a smaller, to a weaker impulse, etc.

and when you see this structure
then here is time management
just for the compression of a section of time, for example
in management
First of all, treating a person
allows a fairly developed scheme to be restructured

i.e. disease
or maybe this event does not necessarily mean illness
where some kind of negative situation is very well prepared
just look through
what is the plan for the development of events

because there is a single impulse of control
when you do it
it gives a very big, sometimes colossally big experience
in terms of situation analysis

and this is the form that arises in management
it is such that you practically diagnose
approximately or even exactly
if you increase your prognostic level
you can see exactly the future event
which are planned at least yes
if they are of a negative nature

and then just varying the time
allows this model to be restructured, as it were
because the time elements do not match
i.e. the planned matrix is not suitable yes

so then it turns out that in this case
the negative event is being curtailed
into the structure of the primary impulse

Well, for example, if you think about it
why do we need negative events at all
Why did God allow it, so to speak?
from a logical point of view, yes, it is possible to create this system
or why is it needed, so to speak

so from the point of view of development
a person must control the system
and bring it to a more general, more accessible level
but he must do it based on his capabilities

and it turns out that if
because well, his capabilities may be different
every person has
different level yes
different position point yes in information so to speak

and yet people are all equal

so it turns out that it will exist
some sign of equality

so that's exactly overcoming
overcoming system
this is one of the signs of equality

so that there are no unnecessary problems
and no matter how much I had to overcome it
some additional amount of unnecessary events there
it is enough to just balance, as if to level
human event systems
i.e. well, develop a relationship of equality there
specially if possible, etc.

and it turns out to be the next level of management
is the level of equalization in fact
i.e. equality in action
any object of information

and if the creative level is as I said
it varies very powerfully
i.e. from the large sphere there to the point

because there is complete freedom of action there

then seeing, for example, some negative image there
informative
you can also take it from the creative spectrum
bring out a small dot i.e. a smaller area
and level
sign of equality
make a large negative area small
compress

and here it turns out that here is the compression element yes
here at this level of management
this is precisely the kind of transformation
additionally

what other than what you compress
you can in a small element of a positive plan
which contains all the preceding and positive
to form such interaction
what is negative momentum
becomes the same in form as positive
i.e. negative information
it starts working for you, and in fact it works

but naturally there shouldn't be any here
some kind of excesses
It would be better to avoid it if possible
some negative information
but nevertheless as I said
if we proceed from the level of the equality sign
it is precisely the overcoming system that speaks about that
that you have to overcome something

then balance the system
and you will overcome faster

therefore if each element
from one element to another you equalize
basically a position in management
then you speed up the control within the autonomy
this is colossal, very important, with big consequences
control property
in a single-pulse system
that acceleration occurs within a sort of limited module

actually

and for example there in my Teaching about God
where exactly is the question initially asked
to be realized
act as God acts

exactly how it teaches to act and understand God

here it turns out that this action is accelerated
has a fundamental meaning

God who includes all events of the World
in Perception
in management
there in local actions, etc.
in general, in the structure, even by analogy with that
how a person thinks about the future
in the structure of even generally planned development of some kind
what he plans

it turns out that here in this system
namely the development of speed characteristics
inside the system
This is an important demonstration environment
according to the tasks of God himself
see simply
and at any distance
at a point in the area

i.e. allowing to see
how God specifically builds governance for example Yes
how does this management work
from the point of view of, for example, His controlling impulse

and it turns out that when you start
at this moment solve your own problems
then in principle it becomes very clear and fast
this is like a breakdown of some situation
into individual components

here, for example, is the first impulse of Perception
why does a person somehow or another determine a situation
i.e. perceives some elements
that they, for example, are some kind of moving elements there
different timbre, different levels of color, etc.

and this is the distribution system
this is the level that allows us to talk about it
what is in the primary impulses of man
there is knowledge received from God
initially yes

i.e. it can be traced
at a level very close as if with a frontal wave of light
where is the Action of God

and there is a completely clear coincidence
human action
and what God did before him turns out

i.e. the human light wave
it's just that everything often goes synchronously
then what, for example, is in the way
or stops a person from always doing so

and here is precisely the contact between this wave
where is the Action of God
and the person himself

i.e. if well in the case when God organizes a person
This is an Action that goes to a person
then control over the external is precisely the wave
it's the same as an external information object
gives you some information
and you need to get
constant, well, some kind of even specific surveillance or something
with a certain vision similar to
and it often resembles physical vision
here at the level of the Spiritual plane
where do you track this wave

that's if you compare it like this
similar to how God does it
then this is actually when a person learns from God
and looks at what He does
then the external element of information
in this case, "looks" at the person yes
Well, you can say in quotes "looks" as if reacting

and when God has the task of teaching man
i.e. in the structure of the autonomous body
having the possibility of Eternal development
and some bodies

already in the modern history of information
that's how they develop

i.e. the compaction of information into a unit of mass
happens at Infinite speed

and then well, at a certain

Well as if at a certain, completely clear level

which is perceived as completely unambiguous and clear

you see that the high-speed flows are like this

what is Infinite Speed

becomes the cell itself, for example

or Infinite Speed Becomes Man Himself

and it turns out that a person perceives himself

always as a maximum speed system

implementation in the World

i.e. high-speed processes

at most they are equal to Infinity in fact

and that's when a person learns to perceive himself this way

then naturally his position becomes very stable

in this world

Infinite speed

always has the ability to escape from a problem

or solve the problem there in advance

the main thing is to understand it technologically

and this is where the task of technology arises

that's when the question is technological

it turns out that the system of general control

it is needed for something in certain conditions

Well, it's clear why

in general terms we are talking about

about the signs of control in control tasks

but we often talk about it

that this control system must be real

i.e. it actually implies

that in some action

you practically do it

having only signs of the norm

or in general you diagnose and know

that this is really normal

and in some cases these are specific events
not signs but specific events

and here is the transfer of control
from signs
from what corresponds to the Thinking of a person
from some plans ^{there}
to a specific event
this is already just a formation
^{it means} such a status of this single impulse
when you actually rolled up the event ^{yes}
into a geometric structure
and considering simply creating such a system
that you think that this is the single impulse of control

and here you already get its natural movement

and in the first break of this impulse
as soon as he starts moving there this sphere
you get instant implementation

and so that the implementation is sustainable
you should get it right away
even greater spectrum of action
there are questions or, on the contrary, solutions

that's how life works
the solution to one thing and then the question still remains ^{yes}

and now make such control
bring them together into this single impulse
some sphere
and let go
and the first numbers are already a solution
but control of this decision
what's next, a specific question or a general question

i.e. you are not somewhere in some autonomous
absolute space torn away from you
you remain, ^{as it were,} in control
on the contrary, a natural image
this is the next question next task

so now take control
better with specific tasks
and I will work with you

when you are in control try
it's still necessary to clearly record
as if to remember maybe even repeatedly
your tasks

look why it appears
next there is the third task
where does the next level of reaction even come from ?
to some Reality

i.e. try to understand
it is precisely the fundamental, as it were, root of your action
and that's when you start to see this impulse
how the structure of the inflow is obtained
to the initially formed impulse

and yet we must still form

one impulse
leave him
and in general, for example, continue to do something
maybe there is another and different type of technology there

then it turns out that here
this is exactly the option of autonomy
some kind of breakaway
the impulse should still be as complete as possible
or is it completely complete in terms of actions

so here is precisely the concept of "completely complete"
this is what happens when this situation develops
there in the Infinite Future
this is like a certain ball there, the sphere of events
this sphere she begins to possess
at a certain frequency

i.e. its future development
all the time at some point translates
to the initial level where it started moving

and this "translation" is what is created on earth
from the point of view of how God does it, it's one level
when the sphere tends to the initial level
and how does a person do it
when the sphere comes out of this level

means outgoing level
is already a human action
and the Action of God is the incoming level

Well, logically it is
it's just that in this case it's already management
proceeding from the point of view of future processes of action

and it turns out that based on this
we can see very clearly
well, so that it is precisely in a complex system
try to maintain control all the time
need to work
on the concentration of the task
or there on the state
while implying that yes
your element of Consciousness is in a complex system
there are some movements happening there periodically
you were in control up until that point
some specific impulses

but at some point you need to take control
when it is not necessary
i.e., for example, the Perception of the physical body is enough
this is enough to implement control

and here inside the Consciousness of a person of course
at some level
there is a constant perception of this information

and this is the perception of the physical body
what if we suppose to consider such a term
how to "perceive" yes
then we accept this information
We can consider perception
but for example not to accept in that form
i.e. to transform

and it turns out that based on this
we can see very clearly
that in the fundamental sense of management
precisely because of Perception
here are certain specific ones being built there
management positions

i.e. we can do such management

in such a way that by varying the Perception
and as we wish
this is the final, so to speak, impulse to build like this
which is independent of the structure of Perception
we have the same impulse

i.e. for this you need to look
really all future development
and build an impulse that would simply turn on
system of future development

and how, for example, can I find out what you have distributed?
there future development is precise and on time
and how then can any person
there try to take a forecast yes in your development

at the system level people don't care
will know the forecast quite accurately
many absolutely certainly

it turns out that working with known events
it is also a structure of understanding
why does a person need this at some point

i.e. it can start working
but precisely maintaining the strategic forecast
this is the level of information transfer

i.e. the person looked at the event
and the more he means the further he controls
there is an absolute forecast
which is still being implemented
precisely in a positive way

then a person must also, for example there's some getting used to it , yes
here they told him a man who was not prepared
that he will have Eternal Life there in any case
well, or proved it with some specific examples

and then he sets the task
this is precisely the realization of this Eternal life

i.e. the information "forces" him, well , in quotes
sometimes it's really some kind of load system
that is starting to work in this direction

and this certain load is like an external load
well, like, a mandatory action, yes
there are times when it is necessary to act
so that something has to be done somehow

For example, there a person earns some salary
somehow he uses these means
or he's doing something there at the management level
these are some systems of mandatory actions

it turns out that based on
from the possibility of the necessity of this system
can this external impulse be there in the opposite direction yes
from which it is collected
already a single control impulse
make these systems like this
so that you get practically
instant understanding of system properties
this is what is drawn to your center and to your single impulse

that's exactly scanning and alignment
this situation as an instant action
and perhaps no differentiation
namely, it looks like some kind of light streams
which do not necessarily carry any information

you're just at a certain level
you know absolutely everything about this information
but you can not translate this structure
in Consciousness

but if you know everything
on some level you still react
to this "all" yes
in fact, you are building in detail

so what's the difference?
it's just that the future turns out to be different, let's say Yes
known future
there is no known
in that case it is unknown
the person simply does not want to work in this field
he has no time, for example, he has many other events

if he is very well as if or concerned about the situation there

which must necessarily be realized in the future
let it be of a creative type

then he just applies force
and implements it in the future

i.e. it turns out, by and large,
any person
may well have a completely accurate forecast
future events
simply based on your actions of any

This is basically what I have deduced as a Law
in this system of universal unified management

because if one person can
so all people can naturally
it's like a postulate
you just have to learn

and it turns out that based on this
It is easiest to learn in an autonomous system
there is a closed sphere of information
it turns out that there is practically nothing to do in this area
some number of options can be implemented
but this is a finite number of options

i.e. it is possible to learn
for a given control method
always with specific data methods

systems of this method
initially chosen by you for example

if the system is selected
Well as if by external control
you need to work through any other method
which you have yes
Well, you don't have a choice, for example, there might be a situation
that one some method of management

then it turns out that this is a property
should also be universal
i.e. the whole system should be equal
one system

one impulse

the whole world in its actions
corresponds to one Action of God

and it turns out that based on this
we can quite well, as it were, draw this path
how is this Macro event
enters inside a private event

those. as one Action of God for example
output this way
so that this World in general would sort of flow over
within one Action of God here

and for this it is necessary that each event
it would be practically
Well, first of all, individual is a sign of individuality
secondly differentiable
i.e. how does the management take place?

and naturally where it should be
within some common area
come this management

and it turns out that here we have
such a control characteristic
that when converting some quantities
from one there to another
first of all it matters
it is your human body
your human soul yes
where you work very clearly on the parameter

physical body
or there is the Soul
Spirit
Consciousness
but it is your management category

and at the same time you practically have
that level of information definition
that the interaction between concepts known to you
creates the entire external picture of the World

i.e. we just need to consider the time of interaction

for example, go at an earlier time
based on the current position of the physical body
there are Souls
Spirit
Consciousness
any other elements
relating , for example, to a person's personality

and see how things are already happening here
level of transition of control
as if into a zone or into a specific area
absolutely clear absolutely specific
information control

i.e. any amount of information here is like this
that you start moving control away from you
means to output control
almost to the primary level
i.e. to the level of God's Action
or should I show it to God directly ?

that's when the action is so fast
that any action immediately hits
to the level of God's Perception

then firstly it is very local
yes, it gets into a single center
as if inside the maximum concentration
and is simultaneously found in all Infinite elements

i.e. the connection of Infinite dynamics
and very precise centralized statics

and that's when you get
therefore as an instant learning system
and the fact that each impulse can be considered here

how it actually folds up
in general, in a certain sphere of management
which may actually be a sphere
always solutions to current issues
related to you
and at the same time some Macro there
global control systems

and you come to that
that when the external system of Reality

enough ^{well as if} actively manifested
and you need to keep control
taking into account some resistance

then you have to see it here
that when it comes to resistance level
then here is the internal level
it is more often at the primary level
effective

because if it happens
some primary action
and at the same time in this action you see
that some wave is approaching
which needs control ^{yes}
it may not necessarily be a negative wave

so it works out here
that this is precisely the level of your personal action
when you start to take control from yourself
and the action of ^{another} system or other people ^{there}
this is a level that is again integrated
in the problem of Macrosystems of logical type ^{for example Yes}

Well ^{let's assume} from logic it can be done
such a system as prevention
some possible control systems
like ^{this}, like this type that can be negative

then return again if necessary
in some situations related
with possible negative phenomena there ^{yes}
any particular catastrophes
or maybe around this information

but try not to touch ^{this} information
because the ability to work within the system
this is the ability to remove the negative system
^{as if} from the beginning

and if a person understood this, he immediately received knowledge
In principle, he doesn't need to do anything else anymore
he received knowledge
and ^{in general the natural development of the World} continues

i.e. if he reacts to some situation
then everything works out well for him and that's it

well, there are private moments in people's actions
apparently when they do something they achieve
then some period of, well, sort of rest, yes

if we consider
well, in relation to adults
then anyway, a person immediately has it
next tasks

Children also have it
but children get fewer tasks there
I guess you could think so
that considering that he doesn't have full rights there yes
up to eighteen years

then here it turns out
that here is precisely the implementation structure
it looks like everyone is equal
and children could participate in management
this is the level when all frequent tasks are private thoughts
even if they look childish there, there are children
or do they have
some form at all, well then a completely new one there
not corresponding to some tasks
it means or maybe they just don't correspond in terms of dynamics

then all the same these actions should lead
to Macrosalvation
and to the fact that this impulse is a single one
Macrosalvation Impulse
it should practically be implemented in this way
so that when this single impulse is formed
it should be the same
as God does in His Action
corresponding to the Action of God
and God's action corresponds to himself

it turns out we have a direct path to God
His personal physical perception
when traced
this is the system in general Well as if of multiple action

then there is one more next level
formation of a single impulse
this is a repetition of action
related to logical cause and effect

primary task level

and this multiplicity can be formed
depending on how you want
or does it mean individually
there by some repeated action of the physical plane

or does it mean you can practically create it
due to the structure of Thinking, so to speak

i.e. returning to the management structure
and working with the past
you can output the control in this way
what do you actually get
lots of management redundancy
due to the fact that through any control system
you can achieve commitment

which is what is required in Eternal life yes

i.e. it turns out that
that's exactly the single-pulse nature
or a single impulse in control
which you are considering for example for a particular task
it turns out to be , well, the most effective, so to speak
only if you take into account
namely Macro-rescue Macro-connections, etc.

and it turns out that when you start
to do the management, well, actually, as if from oneself
but also according to its tasks, yes
having external control light
then you can follow it
where in this problem
and specifically, let's say, how did you interact?
at the level of, for example, action towards you

i.e. what was yours
has there ever been a solved particular problem
i.e. how to make a repeat
but it is precisely the repetition of information
this is a level that is very unique
i.e. this is the level that says that
that a person must differentiate that this is a repetition

secondly, to understand the consequence

you can say that the information was exactly repeated
if for example it is impossible to say
that it may happen again in the future
or it will change there
but this will no longer be a direct repetition

it turns out that if we do
such a management system
then here they are quite clearly identified
then the following criteria
this single-pulse control

that the system itself is repeated, i.e. uniform
well, some similar systems
or using, for example, universal methods
naturally needs adaptation and correction
if you got the result somewhere

this doesn't mean that he
should definitely be the same
in the known system

because the world has been transformed
then you need to enter
well, some kind of correlation coefficient
some action

and this is the level of some action
this basically means that
how to create this coefficient yes
use the previous knowledge system
and at the same time, well, consider that before
until some time there until some point
quite enough happens
some level of previous knowledge

for example, you are giving a lecture there
you tell some knowledge about my Teaching
can be very clearly identified here
management structure
when, for example, there is some personal and dynamic action
can often have more information
than there is a systematic selection of statistics for example Yes
although these statistics may be
there well, from the observer's point of view
more convincing there, etc.

but from the point of view of action
always personal opinion
i.e. a person's personal opinion
this is the level that allows
practically, in general, to implement
this system of single-pulse Infinite development
because it is his personal decision

how to ask a question like this
If
what does a person need to do
so that this is precisely his personal action
Well, it was kind of justified for the person himself
and he thought that means he did the right thing, yes
primary level of personal decision

this is where it matters
Naturally, Macro-creation comes first
i.e., as if control over that
Isn't there even at the information level here?
if possible, this negative action yes

then the transition to the real system
that there is no such thing as at the information level
means stabilization of this system
in control action

and then when you have completed the stabilization
then it turns out that this is a level
which allows actually Well reacting there
to some situation , external OR internal
it allows you to see
that even in the conditions of Macro-management there
integrated management
you have that level
that mastering some knowledge
there is a perception of some level
this is quite enough
in order to make a decision there
and a person in general having mastered the system or having made the
management there
moves on to the next type or range of tasks

i.e. this is precisely the end of the action
in this system it is quite clearly expressed

what exactly is the action that leads to the result

i.e. in any case

I just look at everything from different points of view

I show the development of the ^{actual} control impulse

i.e. I show

how can impulse develop

not to mention the finite property of momentum

Now, pay attention that I'm just saying

that the impulse can develop like this ^{yes}

he can in one way or another

react to some situation or information

and based on this if we have

such a level of management

to work with this impulse, ^{yes}

knowing that it is universal

and get universal control

based on your level of tasks, ^{let's assume}

thus the level of tasks

Now I have gradually brought it to that

that this is a level that may not necessarily be

so that it is clearly and rigidly identified ^{and} immediately in control

maybe in principle

it can be much more efficient to do management

only at the primary schematic level

i.e. the primary sign of information

corresponding to some problem, ^{for example , yes}

and in this first wave

you do the management

^{well,} more rigid, more specific, more effective

I mean rigidity

from the point of view of rigid form

i.e. a specific distance

a specific sequence of numbers ^{for example}

and when you see that external control

exists from the point of view of impulse formation

this is ^{also} technology

including ^{as if} coming from the external environment

then having looked at it from a distance
some objects of Reality
well let it be a natural type
you can see
that the transition from these systems
almost to you ^{yes}
for ^{example}, this light level

i.e. login to your events system
this is something that you practically let happen on your own

i.e. external light control light
it is often the structure that is such
that you are first of all at some level
perceive this this light
Well I don't mean physical light, ^{yes}

and at some level you still let it go further

and here in the depths of the Soul in fact
in the decision-making structure
there is precisely a level of adaptation
external light pulse

how, ^{for example}, does light coming from outside
hits
to your level of Perception

and here it turns out
that everything looks ^{quite} simple here

what if ^{means} we start studying
The laws of distribution of this light
we begin to see
at the level of conversion of the figurative level of Perception
of this image

this is how it happens
such fundamental, ^{let's say}, contacts with God
where God also sets the same task of management
that information coming from outside
she gets there
to God as external information ^{yes} For example

but God has the same task again
He must create this platform for receiving information.

and it turns out that based on this
since such a platform is necessary
you start to see
that any external information from any object
to get into the autonomous region
it should have just that shape
which she has in physical Perception
in physical vision

then it turns out that the translation is already
means information
into your system yes Perception
this is actually the most harmonious level
through the form of the human body

and then on the transition to this form
you can always know about the event
that's exactly what's in this system
need to diagnose the event

and not at the level
for example, some kind of viewing logic or something
and just work in this way
that you work constantly
in the area of information even
i.e. you do not allow the negative situation to come true

i.e. drag out the time, do the management like this
what is the negative level
he is basically practically there
on some separate spectrum yes
it may be complicated there
but nevertheless you always separate this level from yourself

that's why in a single-pulse control system
namely the separation of the negative level
this is a special task
which includes external control there yes

then it includes that control system
what do you see for example Well, that's the property
what besides the concept that "it is necessary to control"
the concept of "prolongation" of "development" is also introduced
and that's when the complex situation is formed

however, you may not express a final opinion

so you come to the understanding that
that any action really has
in the creative aspect always Infinite development
even action

and when do we start to really go out
on the structure of Infinite Development
then it turns out that it is precisely the ^{transition}
translation of this management
into the structure of Eternal development ^{as if}
and with you Eternity
creates the following property of Eternal development

what if we take
Well there from the past ^{yes} or from the current time
is some element ^{there} that is physical
For example there's a piece of some wall there by the building
will be broken off somewhere

and you see that this piece is there
Well, let it weigh five grams there
kind of modified it during the transition
primary form
if that was a photo there ^{yes}

and then it turns out that the change in shape
should still lead to acceleration to control

and here is such a simple example
if a person communicates ^{there} as at the level of Thinking
with elements of Reality
then it turns out to be the mechanism of communication itself
he alone is the man himself
and at the same time, different elements can give a different approach
in understanding this plan ^{yes}

i.e. how does the communication itself take place

and it turns out that based on this
we see the next management position very clearly

that any management is carried out by you personally
This is one of the postulates of the formation of a single impulse
i.e. no control can be
there really was essentially committed by someone from outside

so if by you personally
then you have special motives
besides logical motives

Well, there may be so-called informative and situational ones
but nevertheless situational management
this is also a certain path to some event

and it turns out that if we take this path yes
to this event anyone
let 's start to implement it like this
what to see all other events
then this specific path is a private task
and it is quite easy to implement

you should maybe not necessarily consider there etc.

i.e. it is enough to make a more general control
and get the result

that's why in the systemic general management
i.e. in systemic formation
of this single impulse of control
It is important that the control action
always had results
which is objectified
or by you for example
either there well, some external protocols

and when do you start
do management this way
what in the case where there are protocols
and someone needs to be convinced that this work has been done
that means the fixed part
if this is supposed to be your personal action
by Macrosalvation
there on the personal level of Salvation
then this should not be reflected often
in some social systems

so it turns out that if you
install a control system like this
that in a single impulse of control
you must form
and also, for example, additionally, as if the task of management

because it includes a single impulse
and the task
the further from the impulse
the task as such disappears and then it turns out
it is already autonomous
works with autonomous system all the time

it is precisely on the Spiritual level
where the Soul of man is
corresponds to the level, for example , so to speak
There is endless Eternal development

you see that the structure of Eternity is like this
what if you for example Well, you'll try
see this structure
as a structure for the development of properties and some
nature or your personal actions

then we get the structure of Eternity
contains quite a lot

well unknown archival information systems
which systems may be useful

but in principle it could be like that
that this is just information and you clearly understand
it's better to follow your data yes

and this is actually the level
when the influx
from the system of Reality, well, some information
does not take you out of the structure of the case there
you continue to work calmly

you try almost all the time
for example, to identify
what is the task of precisely managing a dynamic impulse
in this case, if you look at it this way

then it is clear that the dynamic control impulse itself
precisely in the structure of single-pulse control
this is what happens again inside the system yes

but if you make it more or less transparent
then dynamic control has the following
that the light from the control gets into other systems

but by and large
light through some large communication systems
always hits the right spot

and this is the level we get
even with a difficult well as if the state of the loading equipment
you can always draw a line
which would transmit the signal
in control optics

those. visualized
and it turns out that it would be possible then
see absolutely clearly
what do we have, well, in terms of the task, I guess

this is exactly the formation of the task
this is like the next task in action
it is still a special value

and now if we are in action
this task is in progress
for example, we start to make control in this way

what we get from various systems
single pulse system
in terms of remote prognostication, yes
or in terms of tactical actions

then it turns out that this is the single-pulse system itself
it is primarily needed for that
to speed up management after all
besides the naturalness of its development

and that's when we talk about acceleration
such technology yes
using such technology
translating into one impulse we should clearly see
that the more events we do
per unit of time
the denser the internal system becomes

it could be some kind of action
by means of restoring health or improving health
and this may be an action in principle connected with that
that you are simply tracing the development system
as if through the structure of one's Thinking

and at the same time you form a structure

i.e. the ability to do it this way
so that all external information is universal
and whatever you say or do
anyway, everything will turn out for the better there, yes
for you
for the people around you there
for all people of civilization

and how would it be here when we start
to do such management
what do we need
this is precisely the position on all people of civilization
make it as accessible
here in this universal way
we must train those people
i.e. to transfer knowledge systems to them
which allow them to generate such impulses
already inside as if well, more general system yes

because as soon as people unite
it turns out that things are starting to arise here
some kind of external control circuit
who begins to sort of engage in management
Well as if by itself or something

from a distance it looks like just a movement of information
in the implementation of some events

but here you can look at the root
where do events come from anyway

i.e. here you can see very clearly
the structure, so to speak, of the development of events
in which means the concept of "from where" for example
or is there "for what"
these concepts are very clear if you have time
can be calculated in such a control system
due to autonomous blocks, as it were

"from where" logically it can be understood yes
It's better to make a prognosis right away
and to make this forecast for events
it is enough to make the next level of management

for example, we take three eights in a row, yes

and that's exactly if we want in another case
if for example three eights means positive action

otherwise we cannot use it directly
three eights measures
i.e. we either change the background there
or change the number yes For example

and when we make some decision
what is better to change, for example , what management structure
enter
then it is very important to see here
next one as if well the level of cause and effect relationships

that any management
just like God does
similar to what any person can do there

any control is still the goal is clear
and here is the creation of an autonomous system
This is generally quite a difficult task
where the impulse is exactly one

because the impulse must
must be taken into account as if in a limited environment
all the phenomena that are scattered
for example in space here

and when do we start doing such management?

oh well let's say the most intensively the most productively
then all the impulses that
precisely concentrated in space
Now I am giving exactly this kind of control
more due to structure
sometimes it's even non-verbal
and management
for example, by the Spirit yes
With soul
Consciousness

then it turns out that we can
compress all events at once
the outside world
into the structure of a single impulse
and all your events at the same time
bring out and as if impose make interaction

and this sphere has unscrewed again
and went to the office again
i.e. it was realized again
simultaneously in your events and external ones

so you make such control
show me from God's point of view
that all your events that you have
in one sphere
they happened
Well, if you can look at the situation like that
simultaneously with other events ^{there at} the current time

and see which ones specifically
at least a couple of events
here or remember

so make such control
"simultaneity" ^{so to speak} Yes
in quotes it can be either directly

then you will see that the effect is very often significant
i.e. there are cases when this is the only way to work

so make this control
I will work with you
It is desirable that your primary level of your sphere
this was absolutely clear information
what do you need specifically

and then pay attention in today's lecture
when at the seminar hour, ^{so to speak}
you do the management yourself
then I enter more all the time
volitional control system

that's exactly what I'm showing
what you just need to do is build management
i.e. try to do it this way
so that management develops constantly
at a level ^{well} which is close
to the level of the natural state

i.e. if you look at what I give

for example some methods
some only give the initial level completely
some only
a certain level of some layer of management

then here it is clear that the more we are engaged in management
the more precise the task
still revealing
this is some kind of internal parameter
when control always occurs
well, that is, the natural state of a person in fact

you can make a lot of management systems
but bring it to a natural state
when nothing threatens a specific person ^{yes}
implements technologies of Eternal development

this is the situation
what is there in principle with exceptions
all possible ^{there}
there are no trivial or unusual threats there at all
it doesn't even have to be a specific person
or is it not about it being said
there in relation to some specific management ^{yes}
or a person

then it turns out that you can see here
that is constantly being formed
some kind of streaming level of sorts
which is comparable to that
which corresponds ^{well} in form and structure
according to the structure of the material environment, ^{as it were}
ordinary human Consciousness

and Consciousness is at a certain level
^{Well}, some of them are sometimes perceived as such
as a flow level
or a state of peace there ^{as if realized} ^{yes}
it is precisely the state that emerges from the structure of rest

and it turns out that we see here
such is the management status
what if ^{for example} we want
to come true in any case
control

in the structure of Eternal development
then we must have our own state
translate into that system
that this single impulse
is being formed
in the structure it turns out including the physical body

and this external flow yes
as if some kind of flow system
this is also a level that is implemented locally
i.e. in the structure of one impulse

and for example there, well, mechanically, you just take it and say it
that this is one environment, another, let's downplay something
in the structure of Salvation
there really is nothing to downplay

and for example , by the way, such a revealing one
practically the moment exists

that's how it started
Well let's assume there are some negative publications there
according to the structure of the Teaching there or about me personally
there in the newspaper, let's say, "Izvestia"
a very strong influx went to the Drugg party

i.e. if there was talk about hundreds, for example then before publication
then after the publication the count immediately went into the thousands

i.e. a lot of people
it became somehow quick to navigate
and join the party

i.e. it turns out that they perceived it
this level of management is kind of unique in this way
that this one well if on one level of flow
flow control , so to speak
when concentration is a single impulse

i.e. you
external environment
and suppose the action system
it's all one impulse yes
you don't make any distinctions in structure

and the management of Macroregulation is maintained
is happening

instantly if there is some kind of dispute or something is wrong
well, like there were publications and some negative ones
goes instantly
some kind of compensating level
and it seems to happen by itself
without any calls, etc.

and the action begins almost instantly
but as if already on a physical level yes
i.e. the flow is maintained
at the same point of a single impulse
but it somehow holds on often due to social systems

i.e. you can work then
or management
or social systems

i.e. the main thing is to maintain this impulse of Macrosalvation
for example in one form
at one point
in one place

and by the way, to optimize management
can be seen often
after all, today's lecture is here
all the time I was leading as if near this control wave
well, speaking about some part of the management
I'm bringing it back to the initial type of management structure

i.e. in fact I speak all the time
near one geometric place
there in different words without touching on the area of management

and so if we have
Well, the task needs to be formulated and strictly stated
the meaning of management

and then let's assume this control
formulate
and for example set him a task

give this impulse
Well, in the end we will introduce it into some sphere

Yes, we looked at the flow system.
one somehow For example

let it look more clear yes For example

Well, we wanted to make a strong-willed decision

but here it turns out that the will still comes down
to the structure of the fundamental action
in a single impulse all Macrovelocities are located

so at some level
we still perceive
it's like a fast flow

if a single impulse
this means that all control systems are inside
so it turns out that the speeds there are also maximum

and based on this
Here is the flow velocity characteristic
it still exists

for example at the level of the Soul

and the Soul is a static system
as a rule, a person perceives
initially so my Soul is in action yes
that this is calm static
and even manifested in optics
as the optics of some kind of calm action

it turns out that we are still moving towards that
what is volitional control
this single impulse
this is what is generally formed in the structure
actually physical space

i.e. each level of physical space
except for man
a person is again a whole world and there everything is anew

but just space, air, etc. or vacuum
it is a structure of concentrated single impulse
where exactly the selection of the form is
this is already a possible action

because form is comparable to physical action

i.e. we can highlight the form
when there is physical action

that's why the World is created there so physical and so real

what exactly is shape selection
i.e. the control area as such
allows to build physical Reality
and builds really
some natural events occur, etc.

and that's how God built the World
that it is still a single impulse
This includes the lack of form
including yes Infinite form

and the selection of each local form
when we look at some control object

and so does God
when He looks He gathers
object
it turns out or creates so to speak

and when you get closer to control
to this level of God's Action
i.e. God does it this way
and you see the form at the same time
and in action you get one impulse
he is the one and only
then you all act accurately
and accordingly any control
then you have something going on as often as possible even
Well in general, as if even by itself

this one is not that easy
and some richness in management
this is in this technology
single pulse control
even possible without forming a shape

but only because you are all the time
you are on it you are in it
we can pronounce it
you can output to management
to perceive or not to perceive

the main thing is that you work with concentration
it is through this technology

and you always have implementation
as if in super speeds in super dynamics
which often allows for very quick implementation
there to prevent
global catastrophes are often quite opportune
if you have time there
then at the local level too, etc.

and since the task is to avoid any disasters at all
it turns out that we have this type of control
that this is also the achievement of specific objectives

because of the super high speeds
impulse one
there is no resistance
also one of the properties

can be analyzed
find a lot of other properties in this control

This is where I end today's seminar.

Thank you very much for your attention
