

GRIGORY GRABOVOY
The Teaching about God
Anticipatory control
07.06.2005

The topic of my seminar today
this is my Teaching about God
Anticipatory control

in this topic i show
in what way exactly in the literal sense
use this word "lead" in management

i.e. we are in any situation
we try to introduce the level of the next action
and therefore in this management
it is precisely the concept of "lead"
this is the performance of an action, namely the purpose of management

i.e. as a rule if we have
well, some kind of task in management
it doesn't necessarily mean that it's here
namely some negative possible situation
in management

and the point is that we just do everything faster
i.e. we bring our information to management faster
and we don't think so
for example, what we definitely go through
something well for example extreme
or we can not consider that there was possibly a negative
and for example we managed to make positive management

although this point of view is naturally possible
and often it is precisely the advanced control
is used specifically in this system
when we look at management
some negative system
and we must get ahead of her
development of some situation
in the structure it is precisely as if Macro-actions

i.e. manage your tasks
without losing momentum so to speak Yes
according to the basic idea of personal management

there is a task of Macrosalvation
and there are tasks for each manager
and that's exactly when we work
as if in the core activity
what is more characteristic of each personality

then the problem of feedforward control
it's the ability to hold
as if it were its own internal management status
at the same time, so that the basic concepts of management of yours
personally
they were realized

therefore, here there is also a task of a kind of generalized action
where the personality of the manager is at the center of the action

and for example from the point of view of , let 's say, similar systems, or something
known in the system of collective Consciousness

that's why let's assume an angel has wings yes
from the point of view of external observation

that when we watch in action
those. control status - wings
and the body in front of the wings

i.e. the body is under control
before the action is performed
as if at the control level

i.e. flapping wings
which causes the movement of the body and wings
simultaneously

so it turns out that the angel manages to do so For example
warn or do something in advance

i.e. based on such a status, well, on the basis of similarity
how does god even do it
management level yes For example

if we consider
some transitional
i.e. well as if already adapted to humans

management level
which is perceived as the action of an angel
then it turns out that we see some dynamics here
associated with the physical body

from God's point of view
His thought and action are one

i.e. in anticipatory control
He actually works with His information.

i.e. a sign of advancement
for God this is an axiom at this level of management
although she is a bit like that
for Perception it may be unusual
On the contrary, this is the most rigid management status

i.e. here is an advance for God
this is a more rigid status
more confident and more systemic, as it were
almost never changing

and so that a person could comprehend this level
and get ahead
as the status of the dynamics of action
he must accordingly consider
The Thinking of God
how God ^{decided} to pass on knowledge to him ^{yes}
about the system status level

from the point of view of collective Consciousness
and how does it actually happen
angel shows connection with physical body

i.e. if we consider ^{well} as if the level of action
here we are talking about a certain level
relating to the physical body ^{yes}
an ordinary human ^{body}

Well For example there are wings
although there may be an action of an angel there, a thought, etc.

here it turns out that the first level of control
connecting
this level ^{means} exactly ^{means} development of dynamics

this is precisely the development of dynamics
from some static and absolutely static system

after all, it's an advance
for God it is a duty in action
from a human point of view

it means He has already performed some action there
this is already static

and it turns out that for a person
to translate into dynamics
he must man know the thought of God
then it is necessary to consider the status
how should God convey information to him

because in advanced management
it is in this management system
it is very important to consider
precisely the dynamic system of action
thoughts of God

and then it turns out that it takes on the same shape
after all, similarity to God means not only there in the physical body
but also in the fact that an adequate form of action is acquired

as soon as he begins to comprehend
God's thought about transferring it specifically to him to man
this information
then it turns out that here is the first status
it is precisely the manifestation of dynamics in the system of action

for example why does the human body
there is dynamics inside
why did God create it so that blood moves there, etc.
there is a heart working there

and some internal processes occur
why did God need this at all
after all, God was free to create any system
although in the Image and Likeness
but why is there dynamics inside

why is the body a dynamic system yes in general
in high management status

and it turns out that if you think about it

over this process
then we see exactly the joint
where God imparts knowledge
about a completely static system
the body must be recognizable by a person
i.e. a person must first perceive his body

i.e. it is the real healthy ordinary physical body there

and here is the transition of this static information
happens to a greater extent
inside the physical body

therefore, the lead in management
this is an action primarily of the physical body
at the level where the body is manifested
Well as if actually in the Infinite Future
but at some specific point

i.e. it turns out that from the Infinite Future
and the future is being created
visible
where the beginning is created of the Infinite future

This is what is important in the advanced control system
that we see as if some kind of finished lines
in management

only then can we get ahead of something yes
if we see some boundaries of external control

otherwise we can argue for a long time
what is advancement
either it's a thought or it's an internal action
and constantly be in dynamics

but in advance
we must be clearly present
in that place
where, for example , a negative action did not occur

or not even necessarily as I said negative
it's just our personal management there
there is your personal control
personal control of any other person

and it turns out that based on the level of management

we see that there should be clear contours here

so here again there is a somewhat unusual position
she looks like this originally
if you talk about it for a long time
as such a generalized form of Light

if you consider
then it's just the Light that begins
in some specific place in space
but this Light means the Infinite level of Light

and this Light is projected onto the local level
which means static control
and he passes into the physical body

here you can learn to control the Light
from the point of view of the fact that you are in that place
where is the beginning of this Light
introduce the system of Infinite development

and here, by the way, it is even very clearly visible
what is Infinite Development
it is your personal participation your personal will

you can just see it here
literally in such a mechanical way
i.e. you can walk along this ray
which means Infinite Light
but it is specific, as if it even looks like a segment
and then you start your own action
in Infinity

and that's when you start this action
Now God's thought is clear

i.e. for Him
what is static and what is dynamic
in human perception
it's the same thing

and when do you start
as if precisely into the depths of God's Thought
enter from the point of view of knowledge
in general the subject of His Thought

for example, there is a simple understanding

a man thinks
why does god think something now for example
why do something

Well, there is a thinker there, let's say Yes
a person who thinks about some task
and we can understand what he is thinking about
this person
if you focus on it
try to understand the tasks there, etc.

and here is the entrance to the internal structure of Thinking
as if in the human nature of God's Thought means

we begin to see that God gives the following
for a person

after all, it's an advance
this is actually a more precise fulfillment of God's task
after all, we practically don't come up with anything new here

i.e. managers from tasks that come from God personally
they often see just the status as a personal action
more precise action

and it turns out that by the way, in the treatment of diseases
very often it is the exit to a position of accuracy
this is the solution

i.e. the person recovers
when he gets into position of precision
from the point of view of well For example there are tasks for the future
or there are tasks of advancement in management

after all, the correct technological level is often
these are some mastered techniques
it turns out that the person is recovering
because he understands the picture of the world correctly

because any action performed is correct
This is the correct position in the World
and this is also health, among other things

and therefore often not necessary in these systems
think there as if from the point of view of physiology yes

physiology is needed when we consider
there may be some application processes or
or when necessary

and often it is enough to work with Thinking

then it turns out that it is adequate to that
as God does
you get a healthy body for everyone
and at the same time focus this system on yourself

and in principle a person can apply
if he needs it
there for himself, i.e. if he needs recovery
if he is healthy
then it can be precisely focused on the event

and here in the events
although of course during recovery
it also works with events

a very important aspect is
that this is the dynamics of control
which exactly means ahead means
is located geometrically in fact
between the line of events
and the line of the physical body

in fact it looks like this
what is the physical body
and the area of events on the optics is, as it were, adjacent to the body

and that's when we start to try to get through
between these two levels means
we are just entering the environment of advancement

i.e. the lead is the environment is information

we don't have to put a logical thought
and try to get ahead there
like there, well, one car is ahead of the other, yeah
or any system at all

and we can just take the advance information
and work in it
then we will be closer and more precise in management

to what God does
and we need to do it exactly the same

and it turns out that we should see clearly
where God creates the structure of advancement
what is advancement for God anyway
He is completely outside of time.

so it turns out that for Him
anticipation is simply the implementation of an action
Well, at the first level of the postulate, perhaps
at minimum, as it were or what about the influences of external systems
then you get an advance and action
is implemented faster
and that's all

the second factor
it means creating, as I said, a dynamic system
the person who receives the advance structure
as if from the inside
through the inner essence of your body

i.e. the whole organism is tuned
more ahead of the curve in action

for correctness in action

and therefore there is an internal one, as it were
it is precisely the dynamic structure yes
development of the human body

then here it is just visible
the level is already more logical
where the advance system is it more connected
how exactly as an information environment

i.e. there is even an exit level here
for example there in the Infinite Past
it is possible to get out due to the advance system

how do you even get into the past and in management
well from the point of view of this technology
we have to keep up
to escape from the structure of the present and future tenses
and always be in the structure of the past

and the current time constantly seems to catch up with yes in management

and we need to be able to do that
just on the whole structure of the past there
to identify as a structure of the leading type

sounds a bit unusual
but nevertheless it is quite convenient
in management

and for example the status of a living person
in this case, for example, the technology of resurrection
it comes down to the fact that we are entering the structure
when a person is alive and everything

and we try to achieve this level of management
contain in collective Reality
hold it there for 2 seconds , for example
resurrection occurs

i.e. here is the structure of exactly that
what we record in the collective Consciousness
some kind of anticipatory action
before it works
the basic level of collective Reality

and it turns out that based on management
this is exactly the type of the leading one
we don't say of course
that it is necessarily the future tense
as is clear here now

we just have to achieve the goal in management
no matter
where is it in the future or in the past

and from this point of view
the past looks exactly like a construction
completely clear, as if finished blocks in management

why for example Well, let's assume that writing was created , yes
some hard storage media
why is the world structured this way

simply because from the point of view
exactly well like a factologization or something
it is in the advance system after all, yes
the body is set to be ahead in action
we need fairly rigid blocks of information

to understand under which block to put the systemicity
unpack from which level to approach
to recognize some kind of criterion
there a book is some specific information, etc.

and if you think about it
is the situation arranged exactly this way in the world
because in principle, again, we proceed from the fact that
that God is absolutely free
He could create
dynamic forms of information perception

and then it would be the same as how a person perceives thought
it would be quite possible to arrange all the information

i.e. some dynamics some Light
but that's how block systems are designed
in the form of a transferable knowledge system, etc.

and here we are looking at exactly that
it is precisely the meaning of the preemptive action
but in the past

so that we can control the past
we must have rigid blockiness

i.e. it is precisely as if the segmentarity of knowledge yes
separation by some conventional ones
or unconditional boundaries

and therefore, as if transferring this logic to the future
this is how you can find out your exact future

i.e. it is clear why it is needed, often it is useful, it means
and for technologists in management
this is generally a necessary element
in the main control system

simply because we are building the future
it has well well as if apart from absolute characteristics
which are known to everyone
and they go directly to the management
to the level of collective Consciousness
and it's logically clear yes there is a goal

are there any other dynamic systems

which vary there, we don't necessarily need
pay attention to them
if they are not fundamental there

but for a manager it is often necessary to know here
also absolutely accurate
what's happening

i.e. what is happening in detail
sometimes you need to know absolutely for sure

actually fulfill this precision
and in the ideology of management
the whole future should be sufficiently illuminated

and controllability should be like this
what a person should control
all processes
so as not to burden a person
some details, etc.

the simplest option in this technology
just project as if
well, some kind of block-segmental system of the past
how the past works
to the system of the future
but by one simple factor

in the advance system
here in this information or platform or in the mass of advancement yes
choose the best components

and for the past it's simple
It's quite easy to understand there
what's good
from what happened

and how can this system simply be removed from control
and direct it to the structure of future development

and then the system develops itself
and the future becomes known already because of this
that the past is known to you

and if you receive from the future system

signal of fame
this is already a forecast

this is how you build a forecast
just by normal mechanical means
take some of the optics of famous good events
projecting onto the future
the first impulse you receive information

this is how you can collect information
according to the system you are interested in
you can also detail the information

so it means that it can be done this way
the easiest option
it is to take your own physical body as a basis

then the tasks that the body faces
you start to develop them
but the body is like a level of control
one of the levels of management
but in essence it's just a point of your action, yes
your point of reaction

and then it turns out that all future processes
you actually bring out the state of the body
i.e. you translate into the structure near the body

then you can study calmly
there with objective Thinking

i.e. well for example such a question
why do you think this way at the moment
Why
i.e. taking external control over Thinking means

and then from a logical point of view it will be clear
for example, what should you think after some time

and when you start to go out
to this level of management
i.e. to look means from the point of view
namely external, as it were, advanced contexts yes
any action is obtained
the following status occurs

advancement, actually
from the point of view of one's own personality

Well, this is kind of ideal
what if there can even be a question to formulate
it is he who is more like
some kind of ideal level of control
looks like

still in control
the application system exists all the time
and here it is precisely in the ideal case
you have to get ahead of all the systems you have
to create a favorable level
it works for your personality

i.e. create a level not only there for one person
and you have the task of Macro-Salvation
means for everyone

and then it turns out at a certain level
there is no difference
that's when you start doing this anticipation
precisely according to the structure of all the properties of your personality

then first of all you get there
to a completely safe level of development of events
i.e. they develop positively and completely naturally
because you are
well there at a certain management level
and this Norm is transferred into the future

that example where you are actually making a prediction
transfer of the current system
into future events

as I said, it can be from the past
transfer
and so you are from the current time

in fact, the current time is little different
from the time there past
very close borders

and it turns out that we are deriving control
only here we need to have the edges of time as if
the rigidity of time must be strictly observed

a second has passed, it's already the past
you have to see it

then you get used to it
and control is carried out from the current time
where there is a kind of mixing of the current and the future
i.e. you are actually in the future all the time

and that's when you start to tune your body
to work in the future tense
then it turns out that there is already a security policy here
for other people
i.e. you provide them with security to a greater extent
or there you provide it ideally under certain conditions
so here it's only a matter of time

and then you start
work more in the future management system
and this is where the point of view appears
how god looks at your physical body

i.e. outside of time, outside of space
you begin to perceive actions
then naturally the body is stable
it is already eternal because
that it is constantly in the lead phase

so gradually, let's say, imperceptibly
you bring your body into the system of Eternal development
in this technology

and when do you start working already?
through the physical body actually
then it is clear why God created the physical body
that's the idea, yes
the action of the physical body in all Realities means

what happens here is that such a body
it means exactly the one that is indestructible
there is a completely different range of tasks
In fact

and in modern conditions
a person must move on to this range of tasks
enough well there so let's say gradually there naturally etc.

for example there after the resurrection of Jesus Christ
was a different type of situation there
there is a different type of space and a different type of task

because the Eternal body
it is completely more general
more prolonged tasks

Well, every task has the status of Infinity
as if the first level of Perception

and then it turns out
what if a person has a task
it is worth it and it will be implemented
do it naturally

death has already been overcome
so if that's the case then it works out
all that remains is to do it naturally
without creating some kind of crisis context
in this action

but here is exactly the overcoming
or precisely to manage to overcome the crisis
there in the case when a person already
Well, it's there in the collective Consciousness
a person lives there for a century

and in this case Eternal development
we need to remove all systems from the collective Consciousness
that would limit life

and it turns out that this is quite a capacious job
however, it is often quite simple
it's not complicated

put
only the ideological context of governance
and go into advanced control

then it turns out that working
more in the future phase
on control
you translate the body
more future favorable events in the structure

and the main level of management

actually simultaneously implements
your body's task in this system
and you start working already
in the context of collective Consciousness
more and more actively

you can see it here
that collective Consciousness is not difficult to restructure
in terms of a positive direction , I guess

here are all these levels that were connected
with the fact that there is some kind of complex disease
or is there biological death
they are often very fast
are quickly disbanded
due to the fact that you are simply ahead
any other event
and you are already passing
along a more, as it were, high-speed control path

and as soon as you untie one knot
they begin to untie themselves as if by themselves
these systems

By the way, this is one of the treatment technologies
in extreme situations
when it is absolutely necessary to cure
when there is a powerful one there can be sometimes
in some large complex of external situations of influence

sometimes often they are informative influences
i.e. not always the state of a person
it is determined there by some real disease or something
often some information systems exist
which he must overcome

and there is a very useful quality in that management
at the current time the person is healthy for example
and if any problem arises there
then this is just more information
this does not mean that it was realized
system
or will ever be realized

and man by nature always remembers
that he is a favorable event in his life
he had quite a bit, i.e. he didn't have any problems, for example

means negative information
this is still just information

i.e. we always have time ^{yes}
it turns out to be ahead of the event
if desired there or if we want
if we want to overcome it there
it means you need to invest more resources and time ^{there}

if some events are not fundamental
Often people don't pay attention ^{to this}

but to overcome it systematically
then we can't constantly go into detail there
Well, of course we can
but you will have to spend time on constant detailing
Not everyone has time, just

then it turns out you need to do it this way
so that the manager's status would constantly develop
depending on his next actions

and then the lead is already underway
as the level of your internal knowledge
again one of the answers
why did god create inside man
namely, a dynamic information distribution system

^{means} change of state
blood movement there, heart rhythm, etc.
synchronizes
with the movement of the entire external environment

all information changes
and inside ^{yes} there is some change

similar systems
even if only in a conditional way
but still similar systems

therefore, i.e. the external world is similar to that
how a person is structured inside
at this level of management

and it turns out we can

regulating management in general

means your own

Well it doesn't necessarily have to be inside
you can convert movement

means what happens inside

translate into the structure of Thinking

so as not to do anything there, for example there with a physical body

and many people just have a healthy physical body
and it is not necessary to constantly monitor there
internal processes

then it is enough to consider
and what corresponds to Thinking
this position of the physical body

and when we consider in Thinking
some subject of Thinking
here we find
the first autonomous but neutral control environment
you can make any control status from it

i.e. anticipatory control

where there is no need to rush

where is this environment it's like some kind of plasticine conditionally yes
from which you can mold any figure

the one you need

if we consider that your control is embedded in this figure

and in this system you can allow anything
we can say that the figure is control

and once you start this mass management
put into action already
then the action, as a rule, is implemented quite quickly

the whole outside world
these are high speeds of information

any static system in contact
as a rule, it is implemented immediately
if it does not have time to be somehow modified

i.e. we found practically space
where we can work in peace
with advanced control

and all they did was just add on
to the high-speed processes of the World

this way you can see
this is the internal structure of matter
how did God create matter as such

where local and ultra-high-speed processes
they are close by

i.e. informative ones
information material systems
often come into contact with enormous speeds
and a stable mass is obtained

and it turns out that the convergence of this substance
i.e. the formation of a mass of substance
these are very high speeds

therefore, near the atom one can find
some movements of different particles

and from this it turns out that we can
the physics of this process can be recognized
at the management level there are actions
then you can understand what is in an atom

Let's take a look at this for example
Well, it's designed in a similar way
there is a center and movement
center and movement

well if we start to go deeper
we are coming
to the whole physical body of a person
it's in the first control impulse

and if we go further
we already see then
the internal cellular system from within the system as if
this is how any cell is organized

i.e. in fact we are there all the time
in the Norm phase it turns out
if we see the system of organization
it follows logically

so it works out
that we are always in advanced management
we have a certain criterion of the Norm
which is actually not located
again in a certain space
even at a certain point in the body

you can find a cage
which maximally concentrates in itself

this information

and here you can see
that every level of the human body
every cell
loaded with a specific goal, a specific task
Means how is this control system equipped

and just like before every person yes
God sets His task
it also turns out that you can find it
a specific task in any cellular system

then it turns out that it is possible to connect
external management
why does something happen in life
what to pay attention to
or how to counteract
some kind of negative situation

with that
how is this related for example
with a specific human cell there
Well, what about a person in general, yes
with his personality it's understandable

in this case I would like
show what and I'm showing exactly
what is the cellular system
she is just as stable
from the point of view of Infinite development

i.e. if we want to look at each cell
then the cell is also Eternal in itself

it is from this point of view

because she focuses on herself
almost all systems of the World
just like the whole body, *yes*

and the internal connections they have are arranged
precisely according to the principle of Eternal development

if we want to understand
how each specific cell
connected to any other neighboring
or with any cell of the body

it is very easy to understand the connections

from the point of view of Eternal development
each system

and here is the main level of knowledge
is
what is Eternal development for each of the systems

Well For example there the system is like an organism's system
some kind of cell
i.e. we must understand it ourselves
the internal path of each system

and this is what God does
actually understands for people to a certain extent
what do they need ahead of them

i.e. He *seems to be* thinking deeply, thinking deeply
in their tasks

Well, a certain image of a thinker emerges, *yes*
God thinks

and this is the level of Thinking at the human level
i.e. a person perceives this as deep Thinking

this is what is precisely creative
leads people to knowledge
where exactly is the deep system of knowledge
some looks like concern
it is precisely a deep penetration into the destinies of people
that's their job

this is the Action and Thought of God
i.e. and at the same time His external Action

This is where it is very important to see
that man is free
and so that he understands his path correctly
God periodically well as if it were correcting so to speak Yes
or somewhere like this it transfers control
well from the point of view of that
so that a person has his own analysis

maybe it's not
not the level of some kind of correction system, for example
in management
namely the level to a greater extent
it turns out that knowledge transfer

i.e. God does not impose

and directly, for example, correlation in management
this is not the work of God
that's exactly what it is there Well, is it a force thing?

here, in fact, there is a different type of force
this is precisely the transfer of the maximum amount of knowledge
somewhere in the leading spectrum, i.e.

and when do we start
this is the leading spectrum to consider
as an action that is controlled
then we can see that any situation can be controlled
even for example there if we consider
negative situation
we can see its location
Well there is work on the move
this situation to some place
while minimization occurs
if you come into contact with this system

and you start to practically manage
from the point of view that any system can be controlled
including if it is a negative system
then you already have a management tool
because you are in this technology
owning , for example, an advance system
you can already with the negative system
Well how to collide closer

i.e. you put on some kind of glove that protects you from the heat there, yes

so it turns out that you already mean
you are already beginning to analyze the system more deeply

i.e. signs of negativity
why is she negative
why does she exist there near you
and perhaps they exist
more some deep roots of this situation

then it turns out
that's exactly what's going on with the signs of advancement
you have a specific policy for analysis

i.e. a certain spectrum exists
between you and the negative system
because you're still ahead you're still ahead
some kind of radical evil, so to speak
there will be no more from such a system

because it only costs technology to outpace
apply
in general, approach it from this point of view
it's still clear that you'll get ahead

and then you will be able to deal with the negative system more easily
how to work in management

and here is an important factor of management
is that
what is the first angle yes
you can simply fixate on the distant future
knowing and working at the level of Consciousness
you can accumulate the system there
distant future
or some close associate there
and work in intervals seeing what is happening around

i.e. to get ahead by narrowing it down specifically
time spectrum in management

For example there a day ahead for a month, etc.

then it's clear
it is clear what the interval is
and everything is immediately clear
what can come from where

and actually speaking
or does it make sense to get ahead
or not
it is possible to carry out some other tasks then

and how exactly
i.e. to leave the event in this perspective or not

It happens that a person is busy
he could have handled this event
but for this you need to take action
some physical actions yes
call somewhere but he has no time, for example

then the following situation arises
what is the principle of advancement
it works on choosing optimal systems
what is most optimal now
there for humanity as a whole
there personally for a person

but then there are some events that are not needed, for example

they may start to leak out
into the human event system
and then the principle of advancement
can work in such a very specific way

an external system that is not needed for example Yes
Well, maybe it is considered negative
or maybe it's the other way around, it's bigger
will bring further benefits here
there are such systems then

and of course everyone has encountered it
with an analysis of the situation
how negative is the system

then it turns out here quite often
insert a lead sign but of its own type as if
impose your videos on the system

and then it starts rolling
although it seems to be in the same direction
but it does your job

of course we are not talking about it

about absolutely radically negative systems
which must be radically excluded immediately
and in general so that they do not develop in any way

and those who, for example, have the status of some kind of benefit
there is a system built in there
the next development is possible there
Means Well for example some situation

i.e. this system does not allow directly there
take all the seemingly negative information
and transform somewhere there
what if the information is not entirely negative
we need to analyze it

maybe, well, like in a chess game there
maybe it makes sense to play the game positionally like this
what to give somewhere some level of position
well, at the level of existence of this situation
at this moment somewhere to capture
there is leadership elsewhere

and it turns out that this system allows us to conduct
well, such a stable, as it were, control system, like
Well, there doesn't necessarily have to be a chess game there.
but just some systems
to be in a suspended state
.i.e. do not apply direct control
and watch them

and then the controllability of the system arises
given that you are simply the leading factors
you can then this system
even multiple levels actually Well how to tie

it looks like some kind of canvas
which binds the information
Well, I called it some kind of videos
and the system rolls in your direction

when she rolls
according to your level of management
it's becoming safer after all, yes or
and often generally safe
because the platform is yours
and the upper superstructure can be basically anything then
because the platform will no longer turn radically against you

and then the system gets it
some such negative even if
some kind of damping occurs there
and you can calmly study its next development

and as a rule, even if you paused the system
and started studying
it sharply loses functions
namely some kind of such let's say negativity yes

i.e. the criteria are constantly falling
and you the more time you have
the less it manifests itself
it is precisely the negativity of a certain system

therefore in the advance system
there is also this controllability system
in principle any systems yes
as if there is a heightened level of control

level level of calm control
i.e. you observe the situation
knowing that the situation will not be radically harmful
neither to you nor to those around you

and then it turns out
Well, of course , this is again except for some situations

where it is already clear
that it is necessary to immediately transform for the better and that's it

we are talking about
more about strategic management in this case
where you need to understand what situation
attract some more attention

and perhaps it may be under control
because near this situation
that's where collective attention will be concentrated
then on the contrary things will go better
one of the tasks of collective management

and it turns out that we are, after all, management technologists
must control
in general, a long period of time often
because I'm talking about systems

which exist all the time
in the information space

for example, take the same planes there
which fly out within a month
and control the entire airline for a month
This is a large array of information from just one campaign.
and that means well, if there are even one or two negative situations
there are some there
not even related to security issues there
Well, it's close to the point that we need to do this

then it is enough to introduce them as if into the field of vision
doing routine work
and bring the management to them at the right moment

i.e. the allocation of the main spectrum of control
i.e. not to allow the problematic situation itself to be realized

but often in order to not allow it to be realized
we still have to keep it in the control field

i.e. not always instantly
Well as if some instant action could be done
for conventional systems

the same goes for treating diseases
there is often required for knowledge
Often the Souls of people require knowledge

and then it turns out we have to keep control
until the system is known
The soul of another person
and at the same time prevent negative developments

and then it turns out
This is one of the tasks that is used in healing

and in the treatment of many people by the way
if you take the diagnosis there
which a person shouldn't have at all
or there in humanity

and try to constantly take it out of control
then this is a good practice for many people

many can be taught at once

but in principle it is possible to take all the negative diagnoses
Well, a diagnosis is usually some kind of problem or disease

if you take all the symptoms
and withdraw

for example, in the structure of some external management, it means
and say that this is known

what problems does humanity have in general
in the form of certain diseases

and add something else, perhaps unknown

i.e. to close the entire spectrum of information
and try to do so

so that people from the outside can observe these problems

i.e. they didn't get involved in the internal system

due to the lead, they simply analyzed these

these systems

Naturally, humanity will get rid of diseases faster

Then

because analytics

this is still not participation in the process

namely external control

for example, how God does to solve any situation

It constantly increases external control.

and that's all

i.e. it comes closer to Himself, it turns out

in Action

the same thing if a person

begins to increase external control

comes to its own essence

and the essence must be even healthier, it turns out

to reflect more health there

for control purposes

it turns out that a person is forced

to be as if absolutely healthy

at the level of sorts well, factual action

i.e. he is in any action at the root of any action

the person is absolutely healthy
this is how God intended it from the beginning

that's why there is a status
that God ^{creates} man healthy
and does not bring him illness
but in every action
this status is maintained
the principle of primary advance ^{yes}
healthy always body
Spirit
Consciousness is the most controlling there , etc.

there is such a criterion
that Consciousness is actually great in essence
like everything else

i.e. that is why it turns out
that's the initial impulse
For every person this is the maximum health
this is where the information starts to change

if he does something wrong
then it turns out that this could be the source of body problems

because as I showed the body in this technology
connected precisely by internal status
with advance information
for God
where the status is most stable

and that's when we start to integrate this
into the structure of Infinite Action
Well for example how can a person live forever technologically
to one who knows the advance system

so it works out here
unification of the status of personal dynamic tasks
with the Eternal status of God

a man is walking
on the platform of God
through some space that God created
specifically the space where everything is ahead
where everything turns out well then

not because everything is fixed as if it is favorable yes
and here the will of man is manifested
he manages to get ahead within the framework of his task

This is technology by the way
these are manifestations of the complete will of a person
the person here is absolutely not connected to anyone

and it turns out that well as if even he can't be anyone
somewhere there or something transferred in management
he is going on the platform of advancement

but in order to get ahead
we need to have our own solutions

that's why there is an advance
it is still the constant development of one's own decisions
complete freedom of personality

and based on this it turns out
that on one side he walks along the platform
well, the one God gave him
but on the other hand he is absolutely free
because he is constantly working on developing tasks

and this internal integration of this process
shows how a person is in general
in information well in fact, it develops harmoniously

i.e. what about the height of a person
here at the information level
at the level of the physical body
so you can follow it here by the way
how is human organization going
at the level
material
Spiritual system
in his actions

because that's where the personality comes from
reveals itself to the maximum
because in order to get ahead
it must be from several parameters
choose some optimal parameter
we still need to get ahead somewhere

and in connection with this it turns out
that the creative process is sufficiently developed
i.e. on the one hand, statics is absolute
this is an advance
exactly what God created

but on the other hand it turns out
what do we have in principle
that's exactly freedom of will in decisions

because how does a person define freedom of will?
when he makes a decision and implements it
i.e. a complete match in this technology
on the factor of advancement

thus we enter the structure
namely the Eternal ^{actually} control
where is the control, ^{well}, you could say so
that all the Infinite management of the future
this is an anticipation of some problematic situations

or some of those tasks that ^{are not needed}, ^{for example}
in the realization of the Eternal development there
and that's all

i.e. withdrawal from the system of collective Consciousness
there are concepts of "biological death", ^{for example}, etc., etc.
due to the simple advance system

full health, ^{yes}, or absolute health, etc.

for those who are healthy, ^{well}, that means more opportunities
there to deal with specific events, etc.

and therefore based on the level
^{Means like} the maximum lead ^{, I guess}
in management
we [have] such a Spiritual component
which perceives the structure of Infinite development
how exactly is the beneficial effect
as an anticipation of some unfavorable situations
and that's all

and this is quite a powerful natural source

[...] that and above this system

need [...] advanced control
it is infinite and it is necessary to put control on it
control

then it turns out that as soon as we put
control is on her
almost all of us enter into a harmonious state
We control a virtually problem-free system
and then we develop it calmly

the perspective is already more general

here [...] according to my Teaching
more opportunities to implement
for the universal here is Infinite development

This is where I end today's seminar.

Thank you very much for your attention
