

GRIGORY GRABOVOY
The Teaching about God
Increased control speed
30.06.2005

The topic of my seminar today
this is my Teaching about God
Increased control speed

in this topic i show
how to actually distribute
speed control phase
to be able to solve problems at the same time
often a lot of things to do
and at the same time, increasing the speed implies
not only for example the status of an ordinary
physical increase in control speed

in this case it means
number of controlling precise factors

i.e. if somewhere it is said about that
what needs to be done is maybe slow down somewhere even here
namely speed characteristics
in some local process
in order to increase the speed of neighboring processes
then we are talking about this too

i.e. it's just more about optimization
with the aim of increasing the average speed
for all processes

for example how does God do it
It actually works the same way logically.
with all information objects
by speed

and from God's point of view
and how if, for example, we look at this from the outside
this process to consider
then you can see that God is practically working
with Infinite speed

and for Him the concept is obtained
"increase" there or "decrease" the speed

these are quite relative concepts

because His beginning of Action and for example realization
this is generally speaking one control point

and if we proceed from this
then you can see
that for example in the treatment of some extreme conditions
for a person, well, complex ones, for example yes, painful so to speak

it is precisely the ability to unite
the point of the future process when a person is already healthy
and the point of the current process
i.e. when the concept itself practically disappears
"time" or even "speed"
and it happens instantly yes
in action implementation of management

this is also one of the aspects of that management
where we work on the system of increasing the speed

i.e. in reality it looks like this
that we are increasing the amount of information
which in a single tense determines
including a specific amount

i.e. if, for example, you increase the speed to superfast
for example to Infinite
then there is a difference
between action
for example Souls
Spirit
there are Consciousnesses
and often bodies too
is practically leveled out

i.e. it turns out that at one level of management
all aspects of the action occur
Infinite speed
i.e. it's almost as if nothing is happening there
some elements of movement

and for example, God in the structure of Eternal development
He gets, in general, the very structure of speed.
as such it turns out in management

if in human Consciousness there is a concept of "speed"
people move and can determine
some speed characteristics
not only in movement
but also in action

or there in Thinking

then it turns out that for God
this is precisely the selection of the speed phase
from the collective phase of people's management ^{yes}
i.e. what people think about
this is the allocation of this value as such
it turns out in management

for if the Action of God is present
in all aspects of management
then for Him speed is just Action
some Action

and now if we look at it from this point of view
speed
it turns out that the transfer of control
on the speed characteristic
for God
this is the manifestation of this action in the Consciousness of people
i.e. people begin to perceive
some movement ^{and} high-speed movement

if we abstract from that
that something surrounds a person and ^{for example} he is
in some kind of absolute ^{control} option
i.e. ^{for example}, it is in an absolute coordinate system
and in this system all events have already happened, ^{for example} Yes
including the Endless Past
there is an infinite future

then we see that the concept of the "Infinite Past"
starts to pour out
into the structure of the controlled system
^{Well}, which starts to move the structure into the future, it turns out

i.e. Infinite future is understandable
and here is the Endless Past
this is usually some separate array
which begins to put forward
the light that corresponds to the personality there

in B infinity

i.e. if a person has a past
then he will definitely have it immediately
the structure of the Infinite future after all
but it turns out not to be local

because from the point of view of the Action of God
and for God speed has an Infinite characteristic
then the presence of an element of the past
this is already a secured structure of the future

if we start to reason this way
and do management according to our task
well any ^{yes to} the target management task

then the speed distribution
this is generally speaking a sample of the solution
what do you want to do
a sample from a series of some situations
those situations that you need
which means we need to see these situations ahead

it turns out that how they develop
or at least diagnose their current condition

and here as a control
necessary in today's seminar
it is necessary to deal with the solution
of his own task
while ^{doing} Macro ^{and} management there
Macrosalvation

and here is the identification of one's own task
like structures ^{well as if} some kind of on-screen action
i.e. whatever you do is the primary task
is always closer to control

then it turns out that you are mainly engaged in
primary task
which is ^{now needed} for implementation
and at the same time you put
some external aspects of management

i.e. it turns out ^{well} it looks like that

that there is some kind of screen in the optics
some information is more close
and all other systems are often investigative

and here is the concept of "superspeed" when at one point
all issues are resolved

so we have to work like this
so that when the control pulse approaches
so let's say to the control object yes

all other systems are in the control phase
but we know about it but we don't have to look at them often
because they are not so urgent, let's say
nevertheless, they should already be there anyway
under control

it turns out that there is a principle of inference here
well, the management level or the control object
to the level of Norm

for a person there are
a very clear structural level
a person is displayed as
Well is something being considered in management ?
i.e. as a person
which has an Infinite level of implementation

it turns out that the conclusion is precisely
Well, is this the status of management ?
to Norma
this is first of all
correct there precise actions of the person yes
at some distance from you

so it turns out to help
according to this methodology to another person
I need another person
made some correct decisions

but you can't force a decision
means your action
well, as a specialist who sees , for example, yes
situation forward
should be like this
what do you see in terms of Eternal Development technology

well, just Eternal life
some information
and you manage to convey it to this person
so that he could master it yes

it turns out that in order for him to master
you are transferring the technology of Eternal development after all
you must pass through the structure of Eternity again

then you need to put this information in front of him
so that with Eternal development he would receive
a clear level of receiving your information

i.e. free sample

from the Infinite number of phenomena
information so to speak

why does a person have only one option
in its implementation
Well, for example, here it comes
on some one element of the soil, etc.

logically clear and generally informative
that man as a local level of a physical body, yes
forced to make one movement

but God is the one who makes the general movement
even when He acts , for example, through the Physical Body
it turns out that He does make universal systems
right away

if similar to this for example Well, make the controls
i.e. to reason so that
what does a person need for his movement to be universal

it is necessary that any movement
was Infinite in speed it turns out

then the signal is instantly transferred
at any distance
and he, as a person, begins to be present in all processes

and here it turns out that it is just that
distribution of speed in terms of that
that the past is some kind of mechanism
which practically implements the structure of the future

from the point of view of predictive systems
for a person

i.e. as I said the past is always moving
man into the future
as if in some platform

if you think about it like that
it really is growing there all the time
structure of the past
and some movement occurs

so that for ^{example} not to consider
speed structure ^{yes}
it is enough to consider the structure of the time
where there is simply accumulation over time

then it turns out that the factor of movement
there will be no structure of movement of the physical body
and the change of time
that an increase in the amount of time in the past, ^{for example}

and due to this the person is pushed out
into the event structure of the future

Now if we look at this structure in more detail
then it turns out that God really can act
without a concept as such, ^{or something}, in the logical understanding of "speed"
how a person considers speed characteristics

and just look at everything
increase of some events in the World
due to the fact that the structure of the past increases in time
and future events interact with the past
because every element of the future is like
as a kind of platform
can this element be linked to the system of the past

^{well} even if these are distant events
you can still see it there
all communication systems

and it turns out that we are dealing with
with some internal mechanism
if we ^{well for example}, there is the concept of "past"
let's take it and turn it on from the control

let's consider
what is the engine anyway
of this whole process
what drives this structure
for optimization or even for speed

it turns out that we come to information
which is close enough
precisely to the Perception of God

i.e. this is what is very interesting here in terms of management
that such a factor arises
as the Perception of God
well, in some kind of generalized understanding , I guess

i.e. we see that any phenomenon that arises
in the structure of Perception
or does it physically appear there?
this phenomenon is such that it is connected

with some previous action
yes, matter comes from somewhere

and that's when we start talking about Perception
then this is where it arises
a very powerful factor for control
for knowledge

because in Perception
God considers the structure as follows
what does he have
what Action yes
what Perception
this is often also the same value

i.e., in contrast to the actions of a person often
this means that He has universality and Perception too

and it turns out
what is the primary impulse that man gave
that means from the point of view of knowledge of the World
well in the management structure
begins to be close to the structure of that
that God originally gave, for example, universal health
and for example Eternal life to people

that is what happens in Perception
God must consider
this characteristic is also in control

i.e. He should at least analyze ^{yes}
compliance with the primary control impulse
where Eternal life and Eternal health are given
there are still happy events ^{yes}
there are usually additional ones given there

then it turns out that
Well in general, the usual Norm of Eternal Development , so to speak

when we begin to see
in the Perception of God
analysis of this system
then in His Perception there is a primary impulse
i.e. He has already given control over Eternal development

therefore, we are only talking about that
to unite the primary impulse
with the current level of Perception
and consider the difference ^{yes}

i.e. that the person ^{well for example, I misunderstood there}
through its structure of Perception

if we start to analyze
^{means} the structure of human perception
then in the Image and Likeness
there is no concept of "wrong elements"

there is a concept there that simply ^{means}
Well as if "the realization of the primary impulse of Eternal development"

and this is where the problem arises
here is the optimization problem
i.e. the ability to choose the right system of events
i.e. the necessary ^{control} system

enter your own action level
i.e. to show activity
in relation to this or that action

and this is where it arises
the ability to see absolutely clearly and specifically
Infinite development systems

there in some very distant future

and it turns out that in general the system of Perception is yes
or there is a flow of information
if it's just some kind of information object
these systems are what, by and large, determine
development of this speed vector
those. vectorization of speed

where is the speed of the world directed?
the speed of development of the world
and what does this phenomenon represent ?

if we begin to understand this structure
in management
then generally speaking, health restoration there
if a person has any problems
if not then effective event management
this is a fairly planned value
and quite well adjustable

because in this case we can see
that within any event we can see
as if the structure of multi-angle connections

i.e. what determines the velocity phase of an event

and selecting, for example, a fragment of speed
as just a quantity
because in information speed is a quantity
we can just leave the structure for everything
Means Well in general, if so in the absolute sense
a somewhat unusual variant arises in management

but you can take it and take away the speed
leave just the structure without high-speed processes

then it turns out as soon as we arrive
to this element of Reality
we get the primary status of information
where there is no informative movement at all

i.e. it turns out that there is information there
it is actually just beginning to organize itself
or even before the start of its organization

absolutely well in general like a calm level

some kind of whitish shape
in management information
and this form is quite amorphous and inert
and like some kind of environment there, like some kind of steam
so rich and white

this environment is in such a suspended state

This means that it is very easy to structure
management influences
i.e. the form acquires
depending on what system you actually have
and what do you control

it turns out that this neutral environment
up to the primary event level yes
this is not even a level of structure, for example, of action
basis and information basis of matter

and this is precisely what is revealed in the structure of Perception
system

that part of this system is located
in the structure of Perception
one individual person
the other part is actually located
well, in some kind of objectified Reality

and it turns out that this is the selection
high-speed processes in management

where the speed seems to disappear in fact

this is a docking
between the line of action of the structure of Perception
i.e. the systems of human Consciousness
and accordingly the whole Reality

i.e. it is a certain border or even an area of intersection
where the internal motive of the action intersects
and external information of the World
physical including the World

it turns out
what where we want to do optimization for example
yes speed control
it is always as a rule the magnitude of the connection or intersection
some kind of nodal option

where is it happening
there may even be an instantaneous dispersal of this node
i.e. it disappears
as soon as you get close to control

but this is action

i.e. if in the information space
choose such a position
that all negative systems are immediately restructured
as soon as you pay attention to them
you start moving towards them

then it turns out that we have
quite an effective control mechanism
if we even exclude the speed factor from control

as soon as we start
this speed factor again well need to be implemented
i.e. we start moving events forward
then here it is clear that the internal concept of "speed" is yes
and external events
it is often a very related quantity
precisely in the strategic variant of action

i.e. we can see
that in the strategic future
management is happening more
from the level of such mass interaction or something
various elements of matter

and the structure of matter often does not include the concept
there are "speeds"
Well, there is an element of action, and the development of matter is underway.
and a person perceives these characteristics
as high-speed
to optimize management

then it turns out
that according to the Image of equality of information throughout the World
in ordinary physical matter, so to speak
or informational
there must be some systems
which means they try accordingly
Well How to control it or something

systems of various material aspects

i.e. in many systems as a person does
some optimization alignment is happening
event systems

if for example we start to approach this
from the point of view of human control
i.e. the human consciousness begins to realize
this is management
into Infinity

then it turns out that we see
that at the level of Infinite development of any size
the systems are equalized in control speed

i.e. at the Infinite level of control
the speed of action of any system they are equal

then it turns out that here
very simple mechanism
in choosing the optimal solution

super-fast some characteristics
any object of information
they give a very clear route
to a specific person
or even a specific level of Thinking

in this technology it is possible to develop a level
where you can clearly and systematically lay things out
in management
your own thought

because all when objects of information

in Infinite Development
acquire maximum
virtually Infinite speed

it turns out that you are between the elements
which have the same status
speed is infinite

and what does the same status mean?
property of the system
more understandable and more studied

then there are two concepts
there is some unfamiliar situation or information
it doesn't arise here

By the way, I have the same thing in my personal practice
when, for example, there are some new areas
well, even from the point of view of orthodox education
where there are some mathematical
completely new concepts appeared there
seemingly new
there at an intensive level of management

I have never had such data
what is this well from the point of view of even the primary level of Perception
that it is possible to create some kind of novelty at all
here in management

even if we use
theories that just appeared there
or are there completely new theories
a structure immediately emerges
about the existence of this element ^{yes}
in information

i.e. simplifies the search management system
I specifically cited this area ^{for example}
like mathematics
where many completely abstract things
there are given in management and in study

it turns out that from the point of view
management as such
^{for example, to cure a complex disease there, yes For example}
or quickly help a person there

so here we need to try to highlight
same type element

where are the speed characteristics they are the same

and the maximum speed
general implementation of information
this is the man himself

God is ^{basically as if} the primary level
maximum speed implementation

and therefore, since man was created in the Image and Likeness
then they are related in speed as if relative
in relation to other objects of information

but when we look at
already the level of development of Eternity
where the velocity array becomes Infinite
then we see that it is the Infinite characteristics
create real physical matter

you could say that physical matter
even the information system ^{yes}
material world
or just information of Perception
these are Infinite, as it were, super-remote systems
where is Infinite speeds

and their projection here gives a material system

so the task in this World at this level of management
it becomes simple enough
track to make effective management
as a specific state of matter
related to the Infinite Future

to trace this it is enough to consider
status of future events in information
as Infinite Status

i.e. such management takes place there
what ^{well} differentiation i.e. sampling as I said
in this management
namely in increasing the speed of control
Often you just need a sample to make decisions
what action to take

then it turns out there is no need to increase anything
^{kind of} mechanically ^{yes}
it is enough to choose the right light pulse there
and immediately goes

often incomparably greater control
than if you just increase the speed
or increase the control array there

and here it turns out that in the Infinite Future

where they are leveled
all characteristics are obtained from all events
we can see some kind of super signal
which is in the Infinite level
there it may be strong enough ^{yes}
or is there a super strong one

then it turns out that its value is normalized here

i.e. all the Infinite future
why does it ^{matter in fact,} such a projection of the Norm
normal background system ^{and control}
for any person

because this is precisely the transition
from super fast level
at the level of ^{the current state} of affairs
this is a transition through systems that are equalized

because in the Infinite Future
they have the same speed of implementation
in relation to the whole world

and the World in relation to them
also has the same speed

i.e. averaged speed forms
we are given routes

i.e. the routes are clearly visible in the information
and ^{for example} to diagnose
there is a wall of the building
due to the controlling clairvoyance
you can just use this level
that the development into Infinity of any element
^{for example} buildings
and some kind of correlative system
even human perceptions
so you perceive ^{this} building

this is a uniform level of management
and initially from the level of the Norm
which exists in man
you can immediately see what's inside the building

i.e. you can look at it like this
inside physical matter

and see any micro or macro system there
which is already material, for example Yes

and it turns out that when you start
thus consider
well, for example, the aspect of controlling clairvoyance
Spiritual Vision Manager

then here in fact the aspect of action
is not a vision of anything as such

you can see different events
you can see them absolutely clearly, for example Yes

but the question is
to be able to implement a management system
precisely in the structure of Eternal development
what was given by God initially
to every person
namely Eternal life

and be able to implement it at any level of knowledge

i.e. the task is exactly like this in management
so that the primary knowledge of man has no meaning

he still has to master the Eternal system
Well as if some kind of living aspect of the action yes
and Eternal Life

so that is what happens here
that here is like an element of life
extended to the action element
on the element there generally speaking any state of matter

and here it turns out that we can then
the concept of "speed" to consider
precisely in the aspect of life yes

i.e. how, for example, to realize the life originally created
but at the same time so that it is Infinite
and was in all elements of Reality

This is precisely what the concept of "speed" is for
it is translated into a different concept, something qualitatively different
and generally something else in meaning, for example, often yes
into the concept of "life"

i.e. life includes the concept
those elements of Reality
which are not described there in words, for example Yes
and which, for example, cannot be there in one impulse of Perception
immediately understand in detail, etc.

and then it turns out that we can see
that the very structure of life
consists of elements that act as if super fast

i.e. this is how information of life differs
from the information there well as if it were background development

the fact that the speed of the glow of life information
or life as such
it is much higher in terms of luminescence elements
i.e. this is already an investigative level

the information itself can be the main array
as if well, approximately in the background
i.e. do not speed up do not slow down

and that's exactly why we talk about it
i.e. investigative information
with the greatest luminosity
we see investigative information

if a person did something
that is precisely investigative information
becomes wider, deeper, more analytical, yes let's say so

i.e. God did
well there is some kind of primary action there for example
any single action even for example Yes
for the organization of the World

and already investigative systems reflected in fact
re-reflected
they create more global even in time
from the point of view of human perception

Well, God made all of Reality
but here is something more global
from the point of view of the first impulse

and also in humans

his actions are beginning to spread
with ever increasing speed into Infinity

and then we get the following status
that the translation is , well , instantaneous or something, into an Infinite value
any impulse
this is life

and just the same Eternal life
this is the creation of any next value
also Infinite in content and form

if it is not, for example, a person's personality
because a person defines his own, so to speak
development system independently

and if there is another control element
in Reality
which is the controlling element there
in the first impulse of Perception
who, for example, is on the way to solving the problem

this is exactly where the transition is
into such as the following forms of development
forms of management
they are such that it is very important here
to implement practice all the time
which exists, well, in the form of , for example , a task of action

and when do we start implementing this practice
as a systemic practice
well, coming out through there is a special case
then being systematic doesn't mean remembering all the time
some level yes to perceive
at the level of primary manifestation

and systematicity means that
have experience gained in solving this problem

and now if we start to divide
experience from action
i.e. it is possible to accumulate experience, as it were, technological
experience of action which , well, so to speak, is actually expressed
in some decisions, achievements, etc.

and then we already have a spatial environment

independent of time of action
experience is already accomplished action
and there is no need to accelerate the control often
to get a match
between the goal and the realization of the goal
between some task there
and how the task is structured

and when do we start
inside this management status, as it were
see
how is the information then laid out in this case
then it turns out that the management status is as follows
that the primary level of action itself
it also occurs at Infinite Speed

and then there is a transition, for example , to any other system

i.e. why, for example, is it not noticeable there
some Infinite component
in some final local actions

because the primary level which is Infinite
so on the information it is during manifestation
instantly as if he finds himself in the future
and here the elements of the current time remain
which turn out to have different properties

i.e. the current time is different
in speed characteristics
another property

i.e. the current time as what determines
the situation in the present
this is the memory of people
some specific physical actions
informative actions
information activities

and here it turns out that if we
let's start analyzing
construction of space or something
past future and present
from the point of view of action in the future

then here is the platform of the whole past
begins to minimize

although the past is convex
although the past is the starting point there
and helps for example
but the future is infinite
and in volume it still turns out to be bigger

and when we start to highlight
from this Infinite Future
fragment which is the action vector

well, some force, yes, which determines
this is the movement of information in the World

then it turns out that here is the selection
this axis of this spectrum or some kind of rod
relying on the past
it is precisely this that gives birth to the primary status
which is manifested in physical Reality
in the form of an already systemic action

for example , how to strike fire out of stone
i.e. approximately the same action begins

and here we already see then
that the systemic event itself that happened
Well, some information appeared there
due to the action of the Infinite Future and Past yes

then it turns out that this is precisely the manifestation
i.e. primary matter
this is the interaction of these Infinite quantities
actually in control

because the past is always considered
final system
but this is if you know the primary level of development

but the primary level is also Infinite
i.e. a person is always there
in a certain system there is no such division
into the control space
minus Infinity and plus
i.e. in some center and some axial line

and that's when we start
consider management in this way
that we begin to move control

well, in terms of managing current time
from the point of view of the tasks of the past
or the realized level of the past
or from the point of view of future processes

then this is where this aspect arises
that the past is largely known yes
and there are static pictures
which are in the collective Consciousness
many people perceive
Well for example, there is some same information there, yes
for all people on the news for example yes and so on.

and when we look at the future
then it turns out that the systems there are less fixed
although there are many or actually everything there
depending on the level of the manager
he can see ahead

then this is the difference between
more fixed system

which exists as if in the structure of the past
and less fixed there
more in the variability of the future
creates exactly the elements
which are very serious
often they are the main ones
when constructing, for example , the physical matter of man

i.e. this is the difference in the fluctuations of some nuances
according to the same system yes
there is a house in the past
and there is a house that will be there in 3 months
same
but here are the connections between these systems
these are the systems that are built by the current time, yes
and at the same time are the current time

i.e. it turns out that the concept of "speed"
here it is translated only into a bundle
between the element of the past
and an element of the future

and when do we start
this system is actually implemented in management
it turns out that the action is the implementation

just like God does when He acts
He acts and implements management yes
For Him, action is no different from implementation

here is what is happening, I showed the same thing
almost close already
to this aspect of management

and we see that here for example
when we make control in Infinity
we get that the primary level of Infinity
it came from the interaction
two, as it were, generally finite systems

i.e. at least in management you can see
there is all the information
corresponding to the past or the future
and their combined momentum is an infinite quantity

if we consider the element there
how are people born
according to the structure of interaction
two means known levels yes

father and mother of the child
and then the infinite value is obtained
child
so as an investigative level
the parents themselves also had
An infinite level of interaction already
it's like the investigation is already going backwards, yes

therefore interaction
by many parameters or channels
that there is for example one control element
there is the following from the interaction

we see that first of all
concrete human practice
which gives birth, well, actually there
some specific situations of the phenomenon
This is the basic level of control
where is the concept of "speed"
is actually taken out of the structure of the action

for example, a person acts
and the ratio there is past future
or just acts
the events are being implemented
and here the velocity vector often no longer matters
if it wasn't used there
as some kind of criterion value

i.e. the most simple tuning fork of some kind
to determine the speed characteristics of actions
of a completely practical nature
I show the control in this case

this is the level where
well, in fact, the magnitude of the previous action
it means it is higher than the value of external control, for example
behind this action

i.e. it should not distort control
elements of the primary task yes

and then as soon as we get closer
to this control
already well, completely, as if clearly considering
what's happening
from the point of view of the interaction of these systems

then it turns out that Consciousness
which controls development
must act the same way as God acts
i.e. does not define, for example
there is no constant control over the system

and this is where this arises
that speed characteristics are precisely speed
is already present here in the processes
as a quantity that is controlled as information

and here is which you can use as information
manage
and in such a seemingly simple way
what is the speed information taken from
then control is set
just for this information
and then as a consequence we get
controlled level decided by us yes let's put it this way

i.e. in fact, management is done like this
that a certain array of tasks is placed
to neutral speed information
and then the speed develops on its own
to solve this problem
i.e. development continues in fact yes

so it's clear here
that God when he created Reality
what to consider here is the element
what will happen next we will see yes For example
He derived the speed characteristic
into the structure of generation of this value
generally speaking, it turns out that in a person

i.e. a person generates a speed structure
with your personal Perception
and at the same time
some high-speed action is happening

when we start to impose these phenomena
we see that there are
a very specific communication mechanism
between the task of man
while he is doing it
and what will happen

i.e. initially there is a certain area of information
all systems around a person are visible all the time, for example
i.e. where do tasks come from anyway?
from the point of view of the action of the human Soul

what does this person perceive
as a personal task
or as a situational action yes

and when we begin to get to the root of the situation
does situational action even exist?
well, something independent of a person, yes
if you think about it

then here in this system you can exit
that almost all controls
depend on the actions of a proactive person

this is when we enter this system
we see that it reminds us of that management process
that a person is somewhere
well, it's like a planetarium, some kind of big room

and wherever he looked, any of his rustling sounds
i.e. he perceives or moved something there
this rustling can be heard
the sound is heard
and instantly he comes back
and the premises, well in general, it's big
as if the sound does not come out

it turns out that if we consider
such a management task
how to get the sound to be outside yes
at extremely high speeds

it turns out that there are transitions here
between human actions
and elements of physical Reality
Well, what's outside of this planetarium, for example, yes
for example there

this is just an example of course
i.e. we are talking simply
about a large limited space
well maybe some premises or just information yes

some systems that capture
information as such throughout the world
and perceive their signals

because the information is not transmitted
in the form of fabric there often and the material itself
and often as a signal that something happened somewhere
investigative signal

and that's when a person begins to analyze
and this system
it turns out that he is coming under control
in general the system is almost complete
i.e. he begins to control the system
in all aspects of manifestation
wherever this system manifests itself
I didn't come across it in the management

and then he comes
to self-knowledge self-understanding
that for him the concept of "speed" is, well, in general often
element of universal harmony
or some local harmonic quantity

and then the speed is obtained when it is perceived
as an element not only of harmony but also of action, for example Yes
in the harmonic level of oscillation

we come to the fact that here [...] the concept
we can regulate then
speed control characteristics

i.e. if we simply consider information like this
that we give control to physical Reality
through this information

then there is some comparative information there
often it is such a situation that it requires
actually just implementations yes For example
management as such

i.e. you just need to display the information on everything
into the spectrum of real actions

i.e. we can see very clearly
what is most important is the element of Reality

and that's when we are around this real value
we see the speed characteristics
it turns out that we can see quite well
that speed is actually a human action
as such

i.e. a person highlights what is called speed

from God's point of view
God sees speed
only in structure
Souls of man
and human actions
i.e., in fact, in the distribution of the Soul
or there in the development of the human Soul

and it turns out that when we consider

this characteristic is generally in this way
we can find
the speed control center of the entire Reality, so to speak
inside the person himself

then it turns out that we
we can only act in a relative manner
with what's going on in management yes For example

i.e. speed characteristics
which are inside a person
they immediately reflect the external Reality

i.e. they act almost immediately
to external Reality
if you know where this area of information is located

and I just showed it
through various logical transitions
there are often discrete ones
I did it this way on purpose
that there were some connections that I didn't show
I switched to another system completely at once

i.e. I show some situation
and I see that it is enough for knowledge
I'm switching to another system
I say the same thing

it turns out that the control system
which, for example, exists in a person
in terms of precisely controlling the super speed , for example

then this is where you start to really work
you see that the revelation of the status of Reality
i.e. manifestation
Reality happens because
what is Eternal life of man in general
and the specific person you are dealing with

i.e. Reality manifests itself
through the structure of Eternal Life
i.e. again through super-fast events

and this is the value of Eternal life, so to speak Yes

in fact, well, a priori , yes
organizes the entire external world
in relation to a person

i.e. the world exists
as if it were a slight consequence of the fact that there is a person

if you think about it , well, approach this process
from the point of view of logic, for example
and how to apply this process objectively

then first of all immediately realize the status of Eternity
for any person
well, that is, the specific one that you are doing
or see immediately
that he simultaneously becomes
universal for any person
status for example Eternal development

and that's when we
we actually give the coordinate of Eternal development
to some person
then we still give the Eternal value

and it turns out that this Eternal value
she actually was originally
becomes Eternal
when interacting with a person
as if additionally yes Eternal so to speak
well the next factor is Eternal there
we reserve the factor of Eternity

in fact, Eternity is there
multiplied by Eternity
it still turns out to be Eternity
i.e. there are no other criteria

and that's when we start to think
over this sense of management
it turns out that the main criterion of Eternity
or there is Eternal realization or Eternal action
this is the man himself

and that's when you start to see
these are the connections of a person, yes

with the outside world
then you see that regulation is possible
at any control point

and at a point, so to speak, central Yes
where man first perceived
some kind of regulatory system
speed control

on the other hand, here if you look at it
in total
the entire system of relationships
it turns out that at any level of development
it has a super high speed system
Human

i.e. it turns out that a person is practically not susceptible
external influence by and large
if he understands this philosophy
and uses it pragmatically
this system of knowledge that I am giving now

it turns out that a person can quite
seeing and knowing these systems
just even knowing from my lecture course there for example
see
how does the interaction happen
actually the Eternal external system
with the structure of the Eternal human body, well let's say

where, well, sort of Well, maybe in a specific cell
we see the primary level of realization of Eternity

i.e. it turns out that Eternity
it is as if realized in a person
all external Eternity of development

i.e. this is not just, for example, the task of one person
take and for example Eternally develop
but in reality we can still trace it here
such a mechanism to determine

that external Eternity
also strives to interact with humans
get the next factor from personal development

and here it all comes up

a certain level

well, some kind of sequence of actions, so to speak Yes
even in general there is no certain ranking of actions yes

there is no concept here that one action there
more considered concentrated yes
other less there which is needed
so that something is done faster
some slower action yes

here we see
just the averaging of all elements of the action
and here is the identification of the primary sample of action
this is what the person himself does
now and here

i.e. the primary level of action
always what is defined at the current moment
and what the person chose yes

i.e. at some level it turns out
physical matter
can understand the structure of human choice

i.e. from this point of view
matter and even some kind of informational Reality
let it be an informational Reality
even of Infinite magnitude

she has the property of Perception
and you can see that this system has , well , sort of
level of some rationality yes

i.e. the entire external system is a rational system
from the point of view of the equality of all objects of information
this system is so smart
for example, how many people are there ?
in a certain action, etc.

maybe not even always
but in a local one in some specific action

and if the whole information system
is equivalent to one local human action
it turns out that according to the specifics of the action
a person can be completely free there

act as God does

i.e. simply due to the uniformity of processes

that arise from what you have learned

for example the structure of human action

and well, do you want to consider it or will you consider it in the future?

it means some kind of system

how does the world interact in general

with a person in this aspect

and how it brings speed or some other characteristics

and how this information can be applied

in order to really, so to speak, foresee

some negative events yes For example

in a person

and there is a spectrum of negative events

it's not really that big

there are all the phenomena of the World that can be considered

through controlling clairvoyance

and here is the negative status

it just shows up

as an informative constant and primary

it means in the distribution of signals

when you diagnose the control system

here it turns out that the identification

exactly the primary line

this is a level that can be unfavorable

or is it yes

i.e. identification

this is a simultaneous action

control via adjacent value

where these elements are implemented there for example correctly

this is also the right level of management

for example, in the usual way of treating people

or even the implementation of some level of management

there is no business there let's assume yes

here it turns out

that we can see the level is such

that the equalization of some management positions

which exist

this is also a transfer
from some universal value
on the structure of human health

so that a person can be happy yes
Live forever

any action any action
has this component in the implementation

so it turns out that the speed of action
actions that are practically infinite in meaning

this is how god does it
He is at a remote level of control.
also implements for example
the structure of Infinite Development

and for Him
there are local systems for example
there are global ones
it's all one value

so it turns out that a person
as soon as he begins to see
this internal structure of God's Action

i.e. he also knows God in the structure of his Personality
when His actions
this is still the value of the personal factor

it turns out that in this case
speed is almost
is completely taken under control

i.e. when we have already come to that
that speed is the Action of the Personality of God
that's in His understanding

and when a person acts similarly
given what I have shown now
a number of systems
a number of systems that I showed discretely
in order to understand how to act yes

and the personality always chooses

finds a solution on his own
that's why I do many things
with good management
discretely output to Infinite speed for example

and the rest I asked
in the form of a specific value
next size

i.e. it turns out that we can see
that as soon as we come to the concept there
"personal action" ^{yes}
for example, those who want Macrosalvation Means

it is precisely the action that contains
structure of Macrosalvation
and the personality also acts through Macrosalvation

we come to the conclusion that speed
any speed becomes completely super
even super speed becomes manageable

and as soon as you often noticed
that as soon as personal action is expressed
namely the structure of conscious personal management
then it turns out that management is going to implementation

just like God does
He is implementing
He often does not consider the issue of speed, for example
if you need super speed then super speed ^{yes}
in people's understanding

so in this topic in this management
it is very important to combine this
at the level of personal action

once you come to the understanding
and I showed how to understand it
then instant speed control
so you can even receive
instant result in this management

This is where I end today's seminar.

Thank you very much for your attention
