

GRIGORY GRABOVOY
The Teaching about God
Management of social objects
18.02.2005

The topic of today's seminar
this is my Teaching about God
Management of social objects

in this topic i show
how can social systems be managed
subject to equality
means correctness of relations
as within the system itself
and under external control

and here in this case, if we are talking about that
what is the general point in this case
the meaning of management
then it consists in the fact that the goal is clear, yes
optimization of the activity
some social object
if necessary, of course
clear tracking of the level of Macrosalvation

here we will talk in detail about that
what is needed to determine the primary impulse
this is the target management

because the primary impulse
in this case it is directed as if at
on all at once
and at the same time on a certain social area
Well For example there in the area microdistrict
to some area of information
according to the thematic activities of people yes

For example there it is a factory or some other social environment
it could just be a social environment there's a block in the city yes
or maybe just some social conditions

so the management should be like this
as a whole management at the social level
and so naturally the management
on the transfer of actual knowledge of the Eternal development

to every person who participates in this system

and it turns out that in this management
must be seen at the same time
as a Macrosystem
which defines a social object
in the form of some boundary conditions
i.e. it turns out that, for example, by the vision of the Spirit and the Soul
it is possible to define a certain status

i.e. it is possible to determine
how do we see here
the area of management itself as such

and here, by the way, is a rather interesting point
to differentiate in general for the future
how to look at the system as a whole, for example
and at the same time for everyone
Here you have to keep in mind
that when the vision of the Soul and Spirit
as if it is intertwined in the management

I'll talk about this later now
I'll tell you later how it happens
but in reality it looks like this
as a kind of conglomerate of information of the Spirit and Soul
in optical terms

and then we control the entire object
we see it at least immediately

and here is the private level
it is always the level of the Soul
in relations with a person
i.e. you are watching how a person is created
how it develops
and the level of the Spirit in human action

and this is how you can
generalize through action
human action
and the social system
and at the same time deal with each person individually

i.e., in essence, the task is that
to do

and separately by a person at the same time
and the entire social system

so that's what i said
that it is precisely some kind of conglomerate

a certain interconnection between the optics of Spirit and Soul
here this system it is always transformed
into the conceptual system

that's where concepts come from
for example, some social concepts
It is clear what they are expressing
some element of life activity
development of life
and as if by themselves
as a necessary condition for the reaction

but we are doing it
namely real Macromanagement
First of all, actually yes through Macromanagement
through Salvation of all

that is why we must and do set such a goal
and this goal must be realized
we must manage any system

i.e. the concept posed is a certain yes
Well as if some necessary quantity
this should also be a subject of management

for example, a person is faced with some situation
he must consider how he managed the situation yes
for example, at this time
here is some kind of complicated situation that has arisen
there is a need for organization
some kind of model solution
where the situation is taken under the management level immediately

although the situation is negative
but if it is negative for example Yes
but we must nevertheless
the controlling angle of this situation
immediately perceive and take control upon yourself

i.e. how to "unfasten" it from the root
according to information translate

from the area of the logical phase of Consciousness
in the area of the Soul of man, let's assume

and the Soul as a knowledgeable level of control
immediately implements the impulse of standardization

there is such a subtle level of transition here
through logic

into the structure of the Soul
the entire social system is being standardized

why for example there
Well, if a person watched TV
and some negative plot

then when through Consciousness
control actually passes to the level of the Soul
after some time, some relief comes
if for example the situation has already been realized yes

i.e. in the future he sees the situation as realized
Man by Soul
because it is the positive status of the development of the Soul
The soul has Eternal knowledge and a precise structure of development
namely
from the point of view of Infinite development
and there, of course, is a level of complete positivism

i.e. it turns out that we have it necessarily in the Soul
a certain mechanism, a path of development
where any situation, generally speaking, is in principle resolved positively

i.e. for the better for the person himself
who watches and or controls there
this situation
and generally speaking for all people
in the Soul such a structure exists
precisely as the structure of the Soul

so, well, basically it looks pretty much the same
i.e. like all other structures
such in general would seem not so remarkable
private structures there

it is precisely in the structure of the Soul
in the form of an information area

The soul looks like an equivalent system
responsive to any problem
and including those things
which kind of define
solving fairly complex problems

however, at an informational level
they look like this if you look
there on the Soul from the side
then they look optically
just like any other system
there is no level of exaggeration there

some one status
there is a belittlement of the other

i.e. for God any event is equivalent
Well, this principle is implemented here
precisely in the structure of the Soul

and it turns out that here we see the next level there
if we consider this position there
except there is the event of Eternal Life yes For example
the events are equivalent

because if we, for example, introduce the concept of "features"
there is no such thing as "Eternal Life"
then here again we begin
this is like narrowing the concept or making it more autonomous

i.e. the concept of "except" seems to highlight
some area into another system
and that's why we are about Eternal Life
we also can't say that this is some kind of special event

in the structure of information
this is a uniform level of management

God does just that
It shows equivalence
there are current ones, i.e. some temporary forms of Eternity there
and in the Perception of God
what is Eternity, what is there a finite quantity
all this is knowledge that determines
nevertheless Eternal development

Eternal knowledge that exists for God

it always exists
and it turns out that there is no interruption system
there is only the filling of this fraction of knowledge

the same thing in the social system
a person is constantly inside the system
fills itself

there Well let's assume the level of behavior is behavior technology
in this system in this region
and this system is self-filling

therefore the level of influence
i.e. transfer of the necessary management knowledge to
on Macro creation in this system
is

level of identifying relationships within a system

i.e. when we see
that a person got into the social system
starts to adapt, to put in some work
and behavior arise

i.e. we in order to influence
both for a person and for a system
from the point of view of Salvation and the social system
or a person
or both the system and the person at the same time
we must then define very clearly
where are the person's future events in this system

this is where it's very important
we need to have a criterion
as if there is generally accepted knowledge in this case

i.e. we owe it to man
put some property of this type
what do you do for example like this
or something very specific needs to be done
because people may have different tasks
moreover, he may agree
he may not have time to just technically do something
he is busy at the moment, he has other plans

so we have to do it this way
to put the structure of learning in front of a person
in the place where he can accept this knowledge yes

and taking into account in order to save a person
we often need to transfer knowledge very quickly
you also need to be able to put knowledge into the future
some, for example, saving a person
For example there is knowledge of Macro-salvation
at least one level
so that he knows what can be done Macrosalvation
and he personally can do it

then it turns out that if he personally
let's assume that such an action can still be done
then he should see the resource
why can he do this
i.e. at least such a short system of knowledge

and here it is
and why should we show it there?

where is the Soul's mechanism for solving it then?
this question
technologically
or by means of some comparative knowledge

and here he is, for example, seeing the control of the person
seeing what it means he is able to do something

in this case i said
about some such exceptional case
when for example there, besides the knowledge of Macrosalvation
for example, it is impossible to pass something on to a person there
in this social system

at the same time I say
that we work through the structure of our Consciousness
we often don't have to tell him in words
although if there is time then it is better
we can teach him with words yes

it turns out that the task of Salvation is in any case
it includes the management of the social system
Well, it's remote , so it's remote control
this is still more control with light-optics
where there is Action of the Soul of the Spirit of Consciousness
there is a physical body of a person
as an optical quantity, among other things

and when you consider that system already
what do you suppose you worked on
some area of management
and gained access to that
that in the future he will perceive this knowledge
i.e. found in his future
some structure
what did you put on the management just
knowledge system
and he begins to perceive

then it turns out that now we only need to establish communication
between what he perceives
and at the right point he is saved
i.e. in fact, the light of knowledge from the future
saves him

Well for example, some harbingers of some event
and a person begins to differentiate them
according to some internal criteria
or according to specific technological criteria
if he is engaged in my Teaching
he begins to see a concrete situation
and further for example there he begins to understand
where did you get the information from?
Well, from the structure of my Teaching, yes

in this case we will consider
if we consider this category
then at that level, like this
where the Soul intersects
with the structure of Consciousness in the logical phase
it's very clear where the knowledge comes from by the way

this person always understands clearly
where does he get his knowledge from
at the level of the Soul
at least he always knows and differentiates there
what is where

because the Soul is also a reflection
and more than a reflection it is the structure of the World
which contains in full form
all elements of Reality too

i.e. if we consider
For example there take stop time

and give each event some property
define property
and just look at the event as a static structure

in this case the world has a very
very specific structure specific quantities
The soul has the same property

and therefore through the Soul it is also possible
regulate very clearly
as if the concept of "knowledge" and its "obtaining"

well if we took it there and stopped the event
transferred to a static position
then you can study the event as much as you want
and then there are no problems, no need to hurry

we can do any event
the necessary time to study
and in principle, proceed further
in accordance with how the event is modified

i.e. time for the event to change
or there to improve the form of the event

or to remove a negative event
in fact there can always be any number

that's what God gave initially
which gave the structure of Eternal development
He naturally gave time for the decision

that's why Infinite development Eternal development
this is a necessary quantity in knowledge
in the development structure

and that's when we
this is the Eternal characteristic of human development
we are starting to introduce into the social system
then it is clear that we even need control technology
you really need to work all the time
with the structure of Eternity

because if a person needs to learn
some technology
which will save him in any case
what if he needs a lot of time for this?

then we can place knowledge on its development
in a very distant place for example the future
and here is the light of this event
it gradually fills up, its effect is obtained
although this action can be in milliseconds at all

i.e. he, for example, took the right step, yes
and there was no problem with it

then it turns out that we need to deduce
sometimes in a very remote place
the future or this person
or social environment
which determines his future behavior
not in the plan there there forces for example
or somehow it means that by means of pressure it determines
namely, that it is free there and for example he lives there happily

in this sense I use
this is the word that defines it
i.e. he is simply in this environment

and then we can through this structure
through the structure of the social environment
pass him the Macro level

and there are more channels there
it turns out that a person is more protected
the more people work with him
at the same level of management yes
Well, it is clear that this is the concept of cohesion, etc.

but here it works out perfectly
or if we want to see exactly the level
so to speak Macro management in action
it turns out that here we have a very simple position
does it mean that a person is maximally protected
or is it 100% perfect there
in Infinite Development
when he participates in the structure of Infinite development
and when does it really exist
this direction
as if in society in the Perception of people

and here well as if the logical level is clear

God who concentrates around Himself
all elements of Reality
the more developed the control system is
the more people
the higher the concentration on the movement towards God

here there is quite a few like this
it is visual on one hand
on the other hand it is very understandable
and in general a pleasing Law in social management
that this is God's work
increase in the number of people from the point of view of man

and the more people
the more development goes towards God
logically it's clear again
more information
becomes controllable by man
from all levels of information
and man becomes closer to God

well, i.e. take such a task or something
or simply the geometric information area
here all the events of the world are there in one sphere
the more people the more events in the world
controlled by people
then it turns out that people are closer to God
Well, it's just such a logical transition

and from this it follows
Well For example there people took over all the management yes
then practically they should already in this case
continually learn from God
act as God shows
show your social development status
for example in Infinity

i.e. to ensure virtually Infinite development
of their social system

because from God's point of view no system
it cannot be destroyed
in fact, it is always at the right time
may open up again in this interval
in which it existed

precisely in the creative aspect

this is how it grows, for example there is knowledge of the culture of society
knowledge that contributes precisely to Eternal development
or some technological knowledge
technical ones, even, including
it is possible to make technology also contribute yes
these processes

it turns out that if we consider, for example,
so this management process
then here, generally speaking, it is visible
that the task of management in the social system
is to make the social system Eternal
i.e. for the person who participates
in this task

I'm pretty linear in general
, including
deduced this control problem
in the form of a task that can be set
that the task is output
on the terms of the preceding
is more logical material there

and when we consider the management of the Soul
also as a task of the logic of the development of the Soul
then here it is quite probable
that the following levels may arise
help there optimization
I entered this word on purpose
how "probably" yes quite likely

Well, that's what people say sometimes
often in some systems

so in the conditions of the social system
probability when it comes to people's lives
it should always be one hundred percent there it is equal to one
when will people be saved

and this is where the next level comes in
that the development of the social system
must be accurate from a human point of view
who participates in this social system
and not allow any probabilistic possibility

some other development and course of events

so for example there in the political department
there in the political administration
from the point of view of social level
there is always a need to look
on a specific person
to a specific group of people
to a specific region there

and take into account integrated interests
it means where all interests are realized
i.e. we cannot say the interests of the state there
above a specific person or some region

but here are the interests of man
as if above there social so to speak system
they can of course be
because the social system
this is something that was invented by people in the process of development
and in principle you can take and implement something else there
i.e. come up with another model to create
and implement more intensive social management
there is state administration for a specific person

so I think it is necessary to consider here
namely the status of the system implementation
near and around a person
as if by a man's deeds according to his actions
moreover, for remote actions
by predictive actions
where a person develops freely, he saves, etc.

but here there is also precisely the principle of regulation
as if For example there are aggressive systems there
what if we become more management of creation development

management providing to everyone
there according to his interests of personal creative free
there is Eternal development
then we still narrow the scope of the non-creative level
by such actions

because the more we accumulate, the more
levels of their creative actions
the less opportunities there are in this area of information
appear for example there is no one to create there

Well there is a simple example
the plant produces something specific
and everything there is set up for the production of exactly these products
then something third comes out
there is a separate workshop to be made and launched
Well sometimes it can be difficult or impossible

and if the speeds are high
then we get the following technologies
whatever workshop is organized later
it will still be comparable
there is power and in principle
due to the mass production, let's say

it turns out that the workshop will be transformed again
into the structure of the future, i.e. creative development

well, it's like a technological example
but nevertheless, in social systems
including the usual production technologies there
take place in terms of Perception

a man goes to a factory
a person is in some society
in some social production conditions
and this leaves a certain mark
on how he generally perceives and acts
how does he manage this system

i.e. if it is the same plant
the same quarter
and is the same work regular?
this is good, nothing here at all
there is absolutely nothing else
besides the fact that it could be just stability, yes
This is normal for a person
but he gets used to it

and then it turns out that to mean to find
the structure of Eternal development
after all, Eternal development
it is still a different quantity

so here we need to guarantee
the possibility of self-healing, for example Yes

human development technology
give the opportunity to watch events
be able to manage events be able to recognize them
in the face of some difficulties there Yes
or, on the contrary, the simplicity of a certain situation
social events, etc.

because in management
there is no concept of "difficult" or "simple"
there is a concept of "accuracy"
and basically all this [...]

there is a concept, well maybe "expediency"
act in accordance with a certain level
what needs to be done first
that means but that's mainly because
that a person there decides for himself what to do in a particular case

it turns out that this is precisely where the production takes place
as if a personal control space
this is the lever to take and modify the system
so that it will develop forever

Well For example there is a person's entrance to the house
where is some unstable structure yes
it may partially collapse
pose some kind of threat

then it turns out that this is
Well like some kind of loose structure
this is a subject of management
maybe just fix it, generally speaking
but if he has no time he can go outside the system

knowing the task of Eternal development
it turns out that he can
basically just do your job
i.e. he must live forever
nothing should fall on him
so he has to do something with this structure

and then it must go out into the structure outside the structure
i.e. he must

as if the whole Reality had already been determined for him
well, the one he's used to
i.e. it is not necessarily, of course, that we are talking only about habit
in principle about any system

which was perceived by man

he can take over
outside this system
make a general analysis of the situation

i.e. why does it exist

Well, make the controls

there in this case give some control

through the housing office and they are repairing this entrance there, yes For
example

i.e. just enter a thought form there and fix it there
here they are fixing it

i.e. it turns out that here is his personal status
this is the status of choosing a solution after all

Well, you can just go to the housing office there

and communicate there on a physical level

here it turns out that the meaning of management is
it's the same

both on the physical level and on the informational level
the main thing is to achieve action

and here it is

and from God's point of view

idea of man

his actions

and physical actions

it's often generally speaking the same thing

God perceives

the idea of human development precisely in Eternity

and him, generally speaking, the same

at the level of personal action

i.e. in personal action

God gives the same level all the time

what to the physical body

that the level of saturation OR realization of the idea

after all, from the point of view of the generalized control factor

we essentially always have control

coming from one person

he acts the same way as God acts

makes control from itself

optics i.e. the light of his Soul

distributed infinitely uniformly

and it turns out that a person
born

or not yet born who is preparing to be born

it participates in all processes of the Earth

i.e. he essentially owns everything

what belongs to everyone territorially there is information

i.e. there is a certain level of interaction

at the level of equality there means well, some kind of belonging

not like there on the physical level

but in principle this also applies to the physical level

by and large, that means the whole world , so to speak Yes

everyone has equal rights

any born

or the one who is preparing to be born

here they have equal rights to the entire structure of the World

and that's why we need to take this into account here

interaction

all systems yes

all phenomena

there are elements of the World

but first of all there is to take into account

how can a person be realized here

and consider what is manifested

precisely in the social sense

from any person or in particular from that

in relation to which you can

make special control

that's why in social systems

in general in information, let's say, personal systems

it is precisely a private opinion, i.e. a private level of management

when you through a special there or through a special relationship

to a specific person

so you do some kind of management

do some kind of relationship in the external environment

Macroregulation arises

because you have a special attitude

to a particular person

and you will notice that in this case
The soul acts quite powerfully

entire structures of the World are being transformed
when you define
your personal action towards a person

i.e. God acts similarly
Well, He also gave man this knowledge
and this is His knowledge of God
It can act in relation to one
but at the same time it is being restructured
entire structures of the World
areas of the social system

it turns out that at the level of management, for example
let's say well, something like that, something that a person must do without fail
management of the social system
that society is not exposed to any danger
he can do it here
by means of a sufficiently harmonious level

he needs to be able to determine
any person to whom he could there
to transfer the maximum amount of knowledge
at this moment to perform the action
and the action takes place

and here, in principle, [...] the perfect action
which has already taken place
determines the status of development of the social system
as if it strengthens it and makes it
some root means fixing things
in this system
i.e. the system thus unfolds

but here it turns out
what is the easiest way to control so to speak instantaneously
to convey knowledge about this to a person as if to himself

i.e. by this control system itself
then it is possible to withdraw control
on yourself including on yourself for example

and look here
how do you perceive this knowledge yourself?
i.e. it is clear that you know yes

then the transfer of this same knowledge to you
what does it consist of here

for example consider the same position of God
He knows everything

but how does He transmit information to Himself?
and why

those. since He knows everything, He has everything
this is the level of information exchange
then why would He need it and it turns out in this case
and how does He perceive information then?

He perceives her similarly
so that there is dynamics
after all, God Himself creates the dynamics of everything
it turns out he must have any event
determine independently yes Means

and if we consider
there, besides negative events of some kind, that's exactly it
It still determines the creative level of the event.
because He, God, has a mechanism for correction
any event

i.e. it turns out for the logic of God
here in social terms
there are no negative events, generally speaking

He can always consider
the path of another development of this person and this society

and if a person develops, for example
somehow considers some fixing statuses
and thinks that this is some kind of final version
well, in principle he is watching
from the point of view of yourself and others
who participated in the events there
but God can restructure events

and it turns out that when we start walking
according to such status of regulation of the social system
then we should see
that any status of the social system
even historically established
which has already been implemented quite fully, for example

or the system status which

Well, historically it is impossible to change it, ^{yes}
for example, there are some geographical systems

however, we are talking about changing geography
but there are ^{no} boundaries ^{there}
namely, that you can always fill it up
the next level of knowledge

i.e., just like God does
there the region is the same, the knowledge is different
i.e. God is One
but He creates different knowledge in a certain period

i.e. God's self-sufficiency is in that
that He creates different knowledge for Himself
the same ^{form} , ^{yes}
into the shape of a human
transmits various knowledge
and the form itself reproduces knowledge

i.e. within the social system
must exist
self-reproduction systems of saturation
or ^{there is} even filling there with other knowledge
creative type of direction
the same forms of the same regions

and here it turns out that there is a layering
this level ^{is like} one on top of another
leads to that
that quite a lot of connections happen ^{yes}
this is what happens in society
where you can see a very fine line
between all these layers
are some trends ^{there}
with some informative movements

and you can see
that here, ^{as it were}, in all these regional systems
internal social extrasocial
even sometimes there are antisocial systems
i.e. directed against society, etc.

can be seen
the structure of rather special relations
in fact, personal relationships

that it is enough to consider one personality
who has knowledge of the region ^{there}
or generally speaking a person who thinks
above the level of development in terms of management
in terms of help ^{there specifically}
in a constructive way to help
This is where the helping factor comes in

as soon as you see it
you see that the system is starting to transform
very harmoniously around one person

i.e. it is enough for a person to have his own status of Salvation
i.e. to be a healthy person ^{there practically}
and do exactly creative things
the social system around him is being transformed

well, just like around God
the Norm of the World is formed

i.e. right here is the transition
select all events
on the status of the individual's behavior
gives very strong control
as help to the person himself
and social management

so as a management
now make such control
bring out bring out some kind of society
and in relation to a specific person
define management
through the Personality Norm

and you will see how your own tasks by the way
will start to be resolved quickly
because you are typing
very very ^{in general} even colossal one could say
experience with this kind of management
and they are already being decided as already unconditional
i.e. do this control
I will work with you

Please note here that with this type of control
the concept of "mutual assistance" is growing

i.e. under personal management

in this case, a person begins to help others
as if even somewhat involuntarily or something
as he often thinks

but in general the world is arranged like this
that the same Laws
are distributed to many completely different systems

if a person knows
principle
or the internal state of the system
it turns out that he can act quite well
in such a way as to transfer knowledge about the system
if, for example, this knowledge is as if he has completely mastered it

that's when you start to see the system in its entirety
i.e. feel see
how the system itself moves
i.e. the system kind of comes to life
the social system becomes in Perception

although it is clear that by and large
there is a certain position
and really consider it that way
that everything is life
and give life to everything

there is such a level here that we have
exactly this flexible system

i.e. a person learns the depth of the system
depth of personality then
and there arises a one-time type of management there
where is all its endless development
becomes completely free and not tense
i.e. he sees that he really already has exactly
status of Infinite development

because a person can have
Infinite development Eternal
in general, in an infinite number of people

i.e. he must see
from the point of view of the logic of the process
Eternal development
this means that people will increase
towards Infinity

it means there will be new territories

This is basically a technical issue
there will be a natural increase
it can be done technologically
with the development of civilization
this is not a problem at all, it's a territorial level

here the level arises like this
that when we talk about mutual assistance
i.e., it is precisely the identification in the structure of another person or his
his tasks
well, that task which seems to personally concern any person

For example there is the task of universal salvation
concerns any person personally in principle
which, for example, perceives logically

and even if he doesn't perceive it logically
this control system
i.e. he may not know about her
where it says that you need to manage, there you need to take care
through Macroregulation

nevertheless, it still concerns
a specific person

i.e. to say that we need to save everyone first
i.e. to make Macrosalvation
may not know everything at some point
so, but still, it will affect them anyway

i.e. there are laws that in any case
one way or another, a person performs

this is when this position of mutual assistance comes into play
we need to get into it here
into the personality structure of another person
as if it were actually my own personal business

i.e. it's the business of the person who works with the system
and you have to accept it
as a matter of fact well, the same type of vibrations

i.e. the same vibrations there for example, happiness of development
there is Infinite development
i.e. to be able to integrate

in the conditions of a very large number of cases, so to speak Yes
areas of activity

be able to integrate
into the structure of precisely Eternal development
where are you this subtle level
as if social or intra-social development already
you reveal
as my personal path which well it is appropriate for you there
he doesn't call there for example, some strong pressure
this is for you, for example so it's quite comfortable yes
let's say you can develop calmly

and try to be within this system
solve your problems
i.e. to be able to solve them and attract them
other people's decisions

i.e. precisely due to the transfer of knowledge to them
here is to involve another person to solve problems

for example Macro Rescues
although in a particular case it could be yours, for example
but it concerns everyone

so it turns out that here
in fact, in essence here
if we look at the situation further and deeper
then it simplifies, there is nothing complicated about that
to attract a person there to save the whole world
No

because there are tasks
which actually exist in society
there really are nuclear weapons there
chemical bacteriological some things
There are conditions that are more complex in the world
and for example the development of other weapons systems

and naturally this issue needs to be resolved
i.e. it turns out that it is simply on an ideological level
a huge number of people can come
in fact, all people should resist this
so that they are not destroyed
there due to some technical defect
some nuclear power plant

it turns out that there is some kind of illogical situation

Well, overall ^{yes}

that there are many proactive people

which can

but generally speaking everyone can do Macro management

and prevent a global catastrophe

however, this danger still exists

in civilization

and to solve this issue logically

naturally, it needs to be investigated

as if historical roots

there is development of civilization as a whole

but the development of civilization

let's say it like there is someone there ^{for example} there is a chaotic process there

if you can call it that

although of course there is no such thing in essence

there are always laws of development

which are implemented one way or another

Well ^{for example}, we think that at a certain time

the word "control" did not require development

before the nuclear age

as soon as nuclear weapons appeared

next civilization must group itself together

and solve the issue that ^{suddenly} arose

at the level of the task itself

i.e. a very simple task arose

if a car is driving and a tire is burning

then we need to stop after all

wheel somehow put out ^{this} fire

remove the wheel at least or replace it

so this logical action is clear to everyone

the same thing in the social system

there are laws that very clearly define

status of development of the social system

and he is precisely in the social system

looks very tough clear

always almost always definitely

that's if ^{there for example}, ask a question

why did god create many people ^{then}
and make them develop in infinite quantities

because the more people
the larger the social system
here this Law can be traced very clearly
the more accurate the knowledge received by each person

and when ^{do} we look?
that the accuracy of knowledge is due to the unification
can be increased
naturally we can find that knowledge
which will reveal the destruction system
although it was formed ^{as if} historically

and ^{so} it turns out that what difference does it make to us at all
was it historically formed or not historically
there is a problem we must solve it

and so the situation here is this
that's exactly what it takes to solve ^{the problem} Yes
for solution technology
it is necessary to implement the social level

Well, here, ^{for example}, I'm showing it now
I want to express this specifically here

show a specific mechanism
what is needed with this ideology
with such knowledge of possibilities
influence
on any social system
go out ^{for example} there to the authorities
to the justice authorities
to the organs of management ^{there} Macromanagement
^{there is} local help for people

at least the concept of "local assistance" does not exist in principle
because the man who saved
even one ^{there} is still a colossal load
and it is comparable in essence ^{there} with Macrosalvation

that's why here, precisely at all levels of assistance
introduce a very simple structure ^{there}
so that this destruction does not happen
^{there is} a global catastrophe
not necessarily just some nuclear weapons

For example there from some external system and celestial body, etc.

i.e. we are talking about that
that life is given to man, and Eternal life
and he should be able to implement it technologically simply

because it's a very simple example
there if you take it through the structure of Consciousness
to repair some scratch on a finger
why is it possible to do this simply
Here are some simple examples to give

for example, to explain
the philosophy of precisely Eternal development
and try to implement this philosophy and, more accurately, even practice
here it will be more accurate to control this
what to show everywhere in the social system

i.e. there is one more level
Law of development of the social system
this needs to be shown in the social system
any simple facts
to spread positive information

well if for example yes it can be restored
one cell
then of course it is possible and then the whole body will be healed
it just takes more time, maybe a little more

and it turns out that when we can
such facts to find, show and prove
why do I still try to somehow objectify
Well, some protocols still need to be created, etc.
some objective actions

because then we can show
a fairly certain control factor
which is associated with specific people
and everyone's personal opinion
for example, a person is clearly confident
that he applied some method of my Teaching
got the result
and this method really works

then his personal opinion is
actually at the level of well like a law or something

from the point of view of social systems
because his personal opinion is enough
because he has the right to speak personally and himself

and he did it himself
nothing else [...] it's like there's nothing else here
there is just an external analysis

and another person he can say
yes this event happened
but in principle what does this give

you just need to give it to the other person
level of simple learning
so that he could do something like this
it's not necessarily the same there
but so that he could learn to save there
just save in the broad sense
there civilization of people themselves
or there for example if he has no problems
then at least he always saves
this is an increase in experience

so here is the next status
this is an increase in the experience of each individual person
in the context of the development of social systems
due to the fact that we help other people

and in fact, by the way
when a person helps other people
he still faces some situation
around a person

some exist, for example, social conditions
some exist then Well there are borderline conditions
some level of management

and it turns out that when a person overcomes them
he actually decides naturally
exactly the tasks too
because the level of tasks here is such
what if we consider for example
human status
then from the point of view of some international norms
so let's say human rights so let's say
a person is always in approximately the same conditions

and if he helped someone
that is his entirely personal practice
is transferred to his living conditions
i.e. it still expands around itself
safety field
optimality field
and not even in the simple sense of security ^{there}
and the field is just the real next action
i.e. he will be able to do more for people, etc.

i.e. it turns out that more is needed here
still somehow stick to it
control logic circuits
here considering that the benefit rendered to another person
This is still personal experience too

although this situation may never concern
a specific person
but God gives each person a specific path
and at the same time for a specific task
the task of assistance or management is set

let some situation never be negative there
it doesn't concern the manager ^{there}
but if he is a manager, he should be able to help
and what's more, he can make the help universal

that's why we're looking at it here
it is in society in social systems of development of society
when society develops
inside ^{well} there is a favorable social plan ^{there}
when there are no wars ^{for example} Yes

that the knowledge that God receives for Himself, ^{for example,} is like yes
processes through Perception

and the next level of knowledge transfer
this is the level where God actually creates there
in the Perception of knowledge
i.e. knowledge is created as such
knowledge substrate

this is the essence of, ^{for example,} Infinite Development
where is that knowledge that ^{gives}
namely the status of Infinite development

Well, in a person it's understandable

what do those people have there
the most advanced level
there is own Spiritual development
or there is management development
from a management point of view
as a system of development of Consciousness yes
through the Consciousness of Reality

but by and large
after all, knowledge is given by God
i.e. it is God Himself
which is expressed to people
in the form of knowledge of a specific person
i.e. knowledge is completely individual

and therefore there is another one
status of development of the social system
knowledge of system development

each person inside the system
in principle they are basically different
i.e. everyone can think whatever they want about the system
but the system needs to be standardized
is some kind of convoy there, yes
and whoever wants what
the convoy moves in one direction

and it turns out that this is what needs to be done
so that everyone can realize what they want
in a creative way
and the convoy still moved in the same direction
where there is Eternal development

it turns out that here is the level of unification
i.e. personal impulse
brought out to the social system
can be expressed as follows
if a person gives knowledge very quickly

i.e. the meaning of this control
that knowledge then needs to be given very quickly
then a person will be harmonious
in any social system
Well of course it should be human-oriented
not in some that can somehow pursue him there, etc.

i.e. it is meant

that the usual normal social system
with all the social guarantees there
complete freedom of man, etc.

well for example there is full implementation
declarations of human rights

then it turns out that when you look
to the management level in this way
then you see that God [is really a Person
which] is present in the form of a specific person there
which gives specific control systems
there they teach how to live and work in society
it's just a certain system of teaching

Well, since the Eternal God gives this knowledge
it turns out that the person is then in advance sure
that he can receive this knowledge

i.e. another criterion for the development of the social system
this is a precise set of knowledge specifically about Eternal development

as I said that the social system
it's still precision management precise development
from God's point of view
and a person at the same time

and it turns out that here we have
the level of management is such
that the accuracy is still the same
that we are already sure together with God
in Eternal development
which becomes available

that's just inside the social system
you can say that a person can there
achieve the technologies of Eternal development

because well if he lives there on a desert island
he can live there for millions of years, for example Yes
but how can he say

what's the next second
he will continue to live on this island yes

because from the point of view of social systems
there is a level of interaction

there are people who live nearby
there he is a year or a second older
and he lives there more yes

it turns out that at this second
even if he lives longer
this is already a comparative factor

that's why for example there if you put the question like that
God created man
precisely in the direction of Eternal development

because then it is very clearly defined
the status is that of God Himself
and the very status of human perception
it means precisely the Eternal God

i.e. God perceives the situation this way
that when a person considers himself
he sees that God is Eternal
because it is precisely social status that is revealed here
God and man

for example, in social status
what does god look like yes
what is he doing there
Well, why does he go to the store and drink coffee?

and for example, if from this point of view
Well, let's ask ourselves a question
there is a certain situation revolving around God
the whole world is there
for example , sits there and drinks coffee, right?

then how can we compare it using logic?
then this is the Macrostatus of control
i.e. a person thinks
This must be a load, I guess
there to manage there
or do something there at the same time

but a person is built exactly the same way
if he comes next to you and drinks coffee
he will do the right thing

and then the main management of the World
will also be done by this person

and the task of man
it is to do complete control of the World for everyone

i.e. because if he didn't take something into account somewhere
then the event can be sort of configured
to the region
exactly well in fact, there is no such uncontrolled space

and then it turns out that here we see
Well as if in a social system in this case
already some kind of non-adaptive function or something
towards future development
when some parameters become undefined
and this cannot be allowed
precisely from the point of view of Eternal development

I'm showing it now anyway
how to manage a social system
to do exactly in the direction of Eternal development

because there is a normal social status there
this is often a process that already exists somewhere and is set up there
but for the development of the social system to be Eternal
and people in society understood this
and consciously went towards this
This is what I'm talking about more now

so it turns out that he
a person must see God as a Person
it means and at the same time act also
but understand that management
as if in some average status of Personality Perception yes
where a person, for example, sees himself as a manager
as a person who knows
that everything is going well for him there

it must always be in line with that
how does god work
at any level including the physical level

why is God a man and an ordinary man too

because here
very powerful factor well there is equality of knowledge transfer
i.e. an equal to an equal can quickly transfer knowledge

and when you look
the level of governance in society on this plane
then it is clear that this is already the next plan
there, outside the social system, there is, as it were, an external level

here is one social system
we have defined it
now we wanted to look at the other one

Well for example, in terms of just helping
and so we decided to take a look
what is this social system
defined in the information

i.e. there is the first level
there must be some neutral area
like a transition level yes
from one social system to another

but there is no level here
as soon as we leave
beyond the information of the social system
then there is simply an Action of God

i.e. God in the form of a certain well as if an external system as
how God just goes and creates
some level of neutrality

i.e. He outputs control
some neutral value
and then begins to determine the next one
in order to Human Perception
it was well as if reoriented modified somewhat
that the following system exists

i.e. the person actually at the moment of passing
this kind of neutral strip
he is at a certain level of concepts known to him
builds that system on his own, by and large

i.e. if you calculate all the systems of connections there
as if he already determines what's next for himself, yes
for something
he has tasks of his Soul

and the result is an external social system

how is it organized?
in relation to human perception

i.e. at the level of Infinite development
he can have it from there
there are some happy events of technology
good management systems
i.e. he does not reveal any negative plan for himself there
in the first control impulse

and if the tasks of his Soul are such
Well, he does n't have enough knowledge there.
and he has to do something
this is where the negative level begins
as if disbanding as if some events
more than even this kind of information

i.e. a person disorganizes events in this way
what does he mean he 's trying to do it like that
so that from outside and not from some other social system
they wouldn't have come and they wouldn't have appeared

and thus begins as if in advance
do management
and a certain level of tension arises

i.e. the known system
which is known to him inside
society of the current society
he begins to endure problems
well , in terms of their solution, yes
to another level of society

and it turns out that this is a neutral system
kind of transitional
this is the basic level of the solution
where there is no problem at this moment

i.e. the next level or Law
so let's say we can call it
as the Law of Social Issues
this is an intersocial level

just take any problem
bring out
in such a field of information in such an area

and try to compare then
what ^{does} the problem look like
from the point of view of the social system known to you
and from the point of view of the system that is ^{supposedly} new ^{yes}

then the new system can be re-informed immediately
to resolve the issue
because in the new system
You don't know her completely, ^{for example}
how ^{do} you think first based on logic
and then it would be good to re-inform her
so that your question can be resolved

those. please note
that the Soul begins to work immediately
to reorient the system
i.e. you approach it ^{as if}
to know it from the right side
and try to designate this system in principle
as a system of action
as a system of some action

i.e. any problem is visible in this case
what a person reproduces for himself creates
except maybe there are some very problems there
there are ^{some} that ^{go} beyond the scope
there are ordinary ones ^{there} or what about problematic systems ?

these are the problems, ^{so to speak} ,
are considered problematic for a person
there is a factor here ^{that is somehow} outside the social system

i.e. what influences that unknown quantity
or ^{like} the one that is
^{as if by} an external social system
or by that amount
which is the social system itself
where is the person

Here we can narrow the concept of "social system"
to the level of Personality Perception
where a person practically perceives
only your own status ^{there yes}

and then it is clear that only one action arises

man - man
man is a system yes
man - some external environment
i.e. a person begins to realize himself
how is there a strong personality
social personality
who lives in society
and which determines the level of management

thus due to the exit task
into an unknown social system
I again came to the concept of "self-awareness" of a person
i.e. awareness of the power of one's status
necessary for that
to interact with an external system

this is another Law of Management
where exactly any human phenomena and actions
lead to him himself

so does God
He any control action
it leads to itself

those. any action
is done from a human point of view
as if by God Himself
i.e. inside the information of God yes
inside the information of His Actions
i.e. the information sign has there
as if an infinitely developing quantity

if some event has already happened
then the next event turns out to be that it
actually Well as if it were happening somewhere in the future
and here goes the Infinite development of a finite quantity in fact

if you look closely, here
in this even the optics of this development
then based on this we can see
that one of the Laws of Eternal Development of the social system
this is the Infinite action of any finite action
any at all
movements
logic of the process of some task

then it is clear that there is a different social system
it is controlled by that
what can you have here
practically entry into the system from any side
when you bring exactly the level of creation

This is where you should see it clearly
manifested as a creator
and one more of the Laws of Management in the Social System
this is an expressed creativity
i.e. understandable for the other side

i.e. you can do many good deeds
and you can even describe them to yourself in different ways, as if

but it is precisely in the expression for others
should be clear and understandable
not in the form of any actions there apparently
like posters, graphs, etc.
and in the form of clear actions of your following ones, as if in fact

i.e. it is another one of the Laws
it's in the social system
this is the interaction of systems

when you act you move
in every action as
well, like in an archive or something, in a concentrated form
even in a seemingly archived form
and instantly developing further
so levels
when unzipping is in progress, so to speak, actions
it turns out that everything you did before is immediately visible

i.e. you will make contact like this
to external social status
you were immediately recognized as an action level

i.e. your internal openness is some kind of openness
external to an external quantity

in this case, naturally, you should base yourself on
only on creative actions
which you did
which you personally know that you did it
it is not necessary to talk about all this

but it is enough to show that you are creative
that you want Peace, that you go in peace, etc.

but by and large all people are equal
a baby was born there
a person who did many good deeds there, etc.
acting for example there
it means the level which is God's Action
implements there in full
They all have the same status for God

and it turns out that there is any number of good deeds
it's all the same as it could be
the same usual thing for an ordinary person there
from the point of view of the logic of external Perception

so that after all these things there on Saving people for example Yes
in the regions
well, let's just call there some good deeds, for example
this means they were identified specifically
and their line of action was traced
i.e. your experience
because it works out after all
it's like a conversation on a professional level

external social system
perceives you as a professional
there are achievements in the field
positive creative results there
for people for the whole world

and you should be able to show this data
but at the same time
everyone has the same status, everyone has equal rights
and that's why you need to show it in a concentrated way

i.e. therefore you need to do
for the following social systems
taking into account its resource
what is the problem
for the given system with which you are in contact

this is another Law of development
where the most accumulated experience
your personal knowledge
must be realized with maximum benefit
for any other following control system

in society

The law can be traced very clearly
linear, logical and understandable
it can be clearly traced as it is being implemented

i.e. the implementation of this Law
this means that it is also an action of the social system
i.e. for this you need a social system
develop in management

and further when you consider management
from the point of view of for example there is Infinite development
and you see what you need to identify
for example the form of Infinite development
where do you want
For example well, in terms of free will, in terms of freedom of creativity, yes

Means how to try to develop it so that it is understandable
that development is quite relevant
that it is completely joyful there
or at least you make it free
in terms of, well, complete will, complete realization

i.e. you should kind of see future events
must see
how future events develop
within the social system

and these events should give that impetus
which now regulates your actions
not in terms of strict regulations there of course
and in terms of simply focusing on these actions

since you already have such actions
you have to take them into account

but actions can be understood logically
but you still need to be able to do management
at the informational level, as it were
Mind Control
Soul Management
i.e. not physical type control

and that's why you need to see it as a whole
process

what will happen at the social level
at the level of ^{what} kind of interpersonal relationships
for example, in society, including
at the level of remote forecast situations
which includes the concept of a so-called "random variable" often

well, that is, if you look ten years ahead, here
and see
how many cases need attention
additionally
it may be that the impulse is direct
and there are no problems ^{yes}
and look ahead a hundred years
and still no problems

just a question like what are you then
there in the first case for ten years or ^{there} for thirty years
if this is already the third case in thirty years
you have to figure out the structure ^{as if} by yourself
You must choose for yourself what to pay attention to

pay attention here
what is in the forecast variant
the question of personal choice arises

i.e. you take it and, ^{as it were,} appoint it to yourself
some kind of ^{well} as if a problem
i.e. you start to solve it

because if you don't pay attention
then ^{it} turns out that this information does not exist
and then you ^{basically} have nothing to do
and if there is, then you choose for yourself
how to do it

i.e. it is still an internal tension
this is such an internal action
even a certain internal resource
at the same time it is realized
and there should be a lot of resources

and it turns out that when you
so you choose ^{your} future, in fact, ^{yes}
you are building it at this moment

because ^{it means} Well, if you don't like it there

you have the right to refuse not to engage there
this direction in management

it means because right now you have other tasks
you them for example you don't accept it there
don't want to deal with that
what do you think for example it won't happen there
i.e. you kind of go out internally
for the area of this management

and here in society in social systems
there is the same
principle of implementation of development of social systems

if the system
for example, conditionally or in the future
may be incorrect
then it can be self-adapted yes
i.e. it may not develop in that direction
and the problem is simply bypassed

Well, here's how the ship sails
it means then the problem is solved
that just this reef is floating there
on the other hand and that's all

and yet this situation is real
Well there if it is not root there is not already existing
it is the situation of the future that is possible
it is implemented as a system of interaction

Well for example how can we consider the process
how does God perceive for example
My own knowledge yes

i.e. He must have
some very high speed
although there should be dynamics
some kind of super fast speed
that He simultaneously perceives the created knowledge
Creates himself
and He Himself perceives

i.e. it is a super-fast development system
which is due to the fact that
that the speed is so great
that He must also create the magnitude of this speed
and this is already new in this knowledge

that He God does new
It adds speed.
as if some such value
as a transport system of knowledge

and it turns out that based on this
A person can always build himself
optimal and favorable future
i.e. bypass the control system
by simply increasing the speed

here you start to observe in society
some unfavorable combination of circumstances there
well, for example, just increase the control speed
and that's it and move on

often without paying attention there
because then if there is no problem it is
or it just doesn't register
it disbands and it does not arise

and this is the management method
Now try to apply
in relation to all matters it is best to be direct
right at high speed in the social system
what do you call "society" for yourself?
"personal control space"
or "society" in the general definition
how does it exist and social society

try to do the management
I will work with you
Be sure to emphasize
on the salvation of all
in this case, very detailed

when something super fast goes
or just accelerated control
the question arises , let's say, of a certain resource
where to get intensity in management
how to implement some kind of control energy

this is where it comes up
very simple answer actually
in the action itself there is any resource

i.e. the more you work
the more you work with the control area
the more precisely you unpack it
just as God always has
there is a question and an answer
He creates both question and answer at the same time.

here is the simultaneity of action
separation of the actual question and answer
i.e. the creation of two structural environments there
or three structural
multi-structural
the very element of creation is action

i.e. the action is your internal decision
if you make a decision
the solution means it has
a specific level of Infinite development
Well, of course we are talking about a creative solution

in this case we have Infinite development
within the solution system itself

those. decision as information yes
based on the structure of your Soul

i.e. in fact it looks like this
what information solutions
acquires the same properties
which has as some matrix

how the matrix is really there in the direct sense
your Soul

then it turns out that based on this
we have a kind of such status
what if we develop for example into Infinity
from the point of view of any external objects of information
and man is directed in development towards Infinity

then it turns out that
here is your solution
your action
which has the same status as
For example there is the action of the Soul in Infinity
this means it acquires properties and functions
precisely those characteristic, so to speak, of Infinite development

i.e. it turns out that when you accept
some solution
the solution itself is informative
should look like an adaptation system
you personally
your opinion ^{there}
to the Infinite to the Eternal development

and it turns out that based on this
you have ^{in general} a very simple
level of decision regulation
^{there} achievements ^{mean} their tasks

so the information you have output
for management
must comply
both for you and for ^{the external} control system
some external system of Reality
in general ^{there} local
or in some group understanding

and it turns out that the reverse answer ^{is yes}
which exists in the future in the future
it should match in shape
with primary level of solution
i.e. the solution should not be modified

i.e. there is a task in management
and in social systems
this can be seen very clearly too
this is knowledge

then the task must be accomplished
i.e. it is possible to achieve oneself

really the information shouldn't change ^{yes}
and the reverse impulse should be the same
as in the production part

and when we talk about the Action of God
God really does that too
He transmits some information there.
but at the same time, the opposite effect is the same
that God Himself creates everything

then it becomes clear
that it does not change the form of the primary information
that's why the Physical Body of God is like a human one
i.e. God is just a man

it turns out that based on the management structure
here is the unchanging system
this is the transmission of Macro-knowledge
almost everyone due to the same level
i.e. immutability of form

and the task of Eternal development
it's not a change in form that turns out to be a person
then it's not a change
and forms of social events

i.e. this is the level when people
practically well they develop their culture
also originality, etc., etc.

and here is the fixation
free development of any social forms
this already looks like a law
precisely by analogy with that
as God does

Thank you very much for your attention

This is where I end today's seminar.
