

GRIGORY GRABOVOY
The Teaching about God
Implicit Process Management
15-16.12.2004

Hello again
the topic of my seminar today
this is my Teaching about God
Implicit Process Management

in this topic i show
how to manage the process if it is implicit
i.e. it means indefinite
in the form of for example there is no sound of action
or any other expression

and at the same time I give technology
how in terms of management
take into account these implicit processes
let's say, turn them to good use
or do so that this
for example, some revealed implicit process
would not be a problem for a manager

i.e. in this case I am showing the technique
after all, the primary thing is the identification of such a process
then at the moment of detection
immediate execution of control action

then it is already use
well, some kind of situation in the world in general
from the point of view that the optics of the implicit process
she is a diffuse optics

and so here is the control configuration
as if in the whole world
this is the ability to highlight
the structure of , let's say, precise glow
how to create optical glow
create a kind of fulcrum of action
and taking this action into account
implement event-driven management yes

with all this in the management of implicit processes
there is such a position

what is your position with your initial action
is often and usually a controlling action

and actually speaking by and large
a process that is implicit
in essence, at least in the modern age, ^{yes}
and even more so in the future
it doesn't really matter anyway
from the point of view of some influence on the process
here is your action

so if the implicit process somehow manifests itself
then you are faced with a greater task
creation of information throughout the world as a rule

and once you create information
for the whole world
then your events are precisely in optical expression
they acquire a ^{certain} contour
i.e. a certain system of connections, etc.

with all this, we must again take into account
very specifically and expressed
what is your own position
your own control
it is always an obvious process

and if the process is implicit
it can't have a radical impact
on you or on your management

i.e. I am specifically showing these positions
to immediately draw attention
that nothing can be real
here from the point of view of implicit processes
it means to bring out the manager, ^{for example}
well far from the management area ^{yes}

at the same time, it may be so
that the process which is ^{actually} implicit
is thus ^{visualized}
that he just is ^{well as if by} a counteracting process

i.e. if you detect at the optical level
your line of conduct
this line is quite clearly expressed in optics
then the process is counteractive

he must sometimes have a kind of yes, signs of implicitness
at least to get to your information
and then begins to counteract, for example

so here it's a different question
it's like a system when this process
so somehow the properties of invisibility are assigned yes
so this is already an obvious process
and directed for example there
well, for example, on the shift of your events there, yes

therefore, it is very important to clearly identify here
the following system, as it were
well, distributions are sort of at the axiomatic level
that the implicit process which is directed
against your actions
this already means an obvious process to a certain extent yes
it just might not be visible
because of the properties of proximity and influence on your events

an implicit process that did not happen at all yes
i.e. it is not visualized in any way
This question is actually quite simple
because here
or it happens if you do the management
or it doesn't happen
i.e. well it's not obvious at the moment
because there are no signs of the event of this process

and the process is implicit if it
Well let's say it's fundamentally implicit
i.e. it means that from the point of view of the organization of the World
this process is not manifested
in the form of some initial action

and then if so let's say the personality has
a sign of this process
then the person can use it yes
or for some kind of negative purposes, for example
or vice versa for the purposes of there and there creative yes

so it turns out that when we say
about the explicit or implicit level
then here it is absolutely clearly defined
that the person who would like to use

implicit signs, for example, in a negative sense
still has quite serious limitations
in terms of prevalence of action and duration

i.e. they can act locally
they can encompass the whole of Reality
because they act implicitly

they are not manifested, so they are not visible and
and the control circuit
they have to act somehow

therefore it turns out that their contours
of course always minimized

and from this point of view if we start to consider there
well a simple position why is there a kind yes
level positive level of management always wins
because in the case of approaching some implicit regions
which contain a negative control fragment
where is the spectrum well as if invisibility or imperceptibility
it is created artificially
then the area is always localized

get closer to the control area
from the point of view of creation
the process is always obvious
because the creative level is quite open
and the system of Infinite connections goes

while the system of the negative plan
it's like a localized system in reality

and it turns out that when identified
primary phase of management
i.e. the primary point glow that I mentioned
generally speaking, we neutralize first of all
some unfavorable latent processes

because we are creating our own area
and the local point region
always has from God's point of view
the same coordinates by the way here

and it turns out that it goes straight away
reflection of possible implicit action

i.e. a person in principle
well if it's negative
man is actually creating a system all the time
very specific defense of their actions
the primary impulse of Perception

i.e. Perception is the opening of a certain sphere of the ball
where at the exact level there is always a counteraction
some implicit value

and if this implicit value is as if negative yes
and we are talking about counteraction

and in principle, well, from the point of view of logic in general
here it turns out that any implicit process
he certainly needs control
because here it seems like it will develop
if it is implicit then the coordinates are not fully revealed let's assume
but there are signs of the process
the coordinate property of a given process may be unknown
so in any case you need to be able to listen
implicit process

i.e. in the same way as you work, let's say, with your hearing and your usual sense
of hearing
well, normal hearing. Perception there, let's assume, is by physical hearing
there is such a value here

Well for example, there is an avalanche somewhere there, yes
there is a pre-avalanche level
i.e. when a person well there clairvoyance begins
sound hear
Well, this is the sound of future processes.
that there is a rumble and some kind of avalanche

provided that there No problem
it just goes away without causing any problems
or there are no problematic actions there
then the sound is one sound is quite clear
i.e. although the avalanche is in the future, the sound has a certain melody

if there can be an influence
then the discreteness begins to increase
so here is the discreteness
i.e. transition of the control level

at the current time
this is a transition where the process is implicit
can always be made explicit

i.e. we must listen
identifying atypical systems
in the auditory, as it were, Perception of Reality

i.e. it is advisable to train here
this is actually the function of hearing
Well, let's say there's no such hidden rumor Yes
not physical hearing but informational hearing

i.e. you hear as if with your ears actually
but at the same time you hear the background information

By the way, you can listen to music like this
and any speech at any distance, etc.

and simply unlike processes
there speech is easy to hear at any distance
because this speech is a revealed process
you can there hear Thinking yes etc.

but precisely to hear Thinking
can you understand him
can be seen
you can read there for example Yes
for example yes as they say
from the point of view of if only a person needs help
i.e. it is impossible to invade Thinking
if it is not related to helping a person

and or if the person is not aggressive
then he is absolutely protected by God
from the invasion of his own Thinking

but aggressive systems they are certainly manifested
and you can immediately determine what we are talking about

and when we, for example, talk about that specifically
that the implicit process is a process
still possessing seemingly undefined properties
then the magnitude of some kind of system of aggressive action

this is, as it were, a logically acceptable value

i.e. we take it as a criterion as a kind of marker
we believe that in a logical version
i.e. logic distributes control in this way
that some negative effect is possible

then here is this marking
it is basically any implicit process
makes it generally speaking strictly obvious
but in a certain, as it were, geometric expression

i.e. hearing yes for example, you train your hearing
and ear training
you can just train it with digital rows
this is what a row means
take a series of numbers there yes
1 2 3 let's suppose

and in principle if they are just against each other
for example, it means so mentally Well how to hit physically yes
it turns out that we can hit
"1" and "2" and it will be like three sounds

Well, that is, we can train our hearing
by some means as if artificial actions
in the control system

and the three should radiate in principle
the same sound
even the contact of systems
in the system of general connections
gives a uniform reaction

the same way if we, for example, do two actions
aimed at
or there is an infinite number of actions
in one control
you can do it this way, by the way, put it in this lecture
you need to pay attention
what can be put into one action
the meaning of Infinite number of actions

we just think that at this level
Infinite number of actions
but as soon as they cross over
into the local point area

then we get
what is your action
always has a high energy capacity
in relation to any implicit process

and therefore here is the background pushing back
some kind of implicit system
back into the management plan
creation of creative Reality
is a large number of actions

because if the number of actions is very large
then it turns out that
where is the place then for the implicit process yes
you seem to be displacing the fullness of the World
any implicit systems
but for this you need to work a lot yes

so if we look at it from the point of view of this design
then it is an implicit process
this is what exists

near the physical body of a person
to determine means
well, and in a certain plane it exists

so from a logical point of view yes, near the body
Well For example there are processes identified there
which are the managers
but for example not visible to physical sight
but visible there by the controlling clairvoyance but
or Spiritual vision

in this case, to reveal the implicit process
then it is necessary to consider it
after all, it is the physical body of a person

i.e. a complete sign of revealing implicitness
some kind of incomprehensible action , yes
immediately incomprehensible or possibly aggressive
is the first factor
find the physical body of a person
in the area of possible manifestation

the easiest option is to pay attention to yourself
i.e. well, let's say remember yourself there and just imagine
and the area of localization is immediately clear

where is implicit action possible

because in principle, from the point of view of logic

For example there if a person should be protected

from some random process

he must control everything

if near it for example Yes

a sign of implicit action appears

or are there some microsystems?

which may have some harm there

then it turns out that he is forced

make this area explicit

well, that is, more expanded, more specific

comparable to his level of management

but since a person must in any system

be alive and healthy live forever

then he must have any control system

implicit type

means to output into your control system

where he definitely copes

i.e. makes that system positive

considering that a person has other tasks

that there are clearly some negative actions there

there is just a task where it should work yes

take action on one's part

then it turns out that a person

here in the action parameters

that's why I say that implicit processes

it is desirable to identify it as quickly as possible

from the point of view of prospective development

and if they can be manifested in perspective

because any actions

there are even opposite actions there

or potential actions

these are still manifested systems

they are like in the information system

just have an optical expression

and are quite easy to control

and if the process is implicit

then it turns out that this means the task of identification
this is a special load
i.e. a person must accept
constantly Infinite number of solutions
in this area
to block the entry of an implicit process yes
in your area of information

i.e. the function of Consciousness in a person works
in this local area
which holds back some hidden process
as a system as a generator
An infinite amount of information

it's still necessary to have a certain habit
pull such a load , yes

and therefore it turns out that the load area
was not developed for a long time, as it were
this process needs to be brought
into a controlled form

for this the region of Infinite number of solutions
is transferred to the area of prospective events
i.e. it is done in such a way that the task is still the same
for any process there, explicit or implicit
all participants in this process
must live forever creatively happily
i.e. the design is quite clear

in this regard, as it were Well, representatives of the implicit area, so to speak Yes
whether these are events or people, etc.
they should be like well in information
thus located in your control
that your control is like your upper plane
closes their area, as it were

but this is exactly Macrosalvation
i.e. this is the Salvation of all including them
they enter this environment and are visualized

those. in the Macrosalvation system
they appear very clearly then
because a specific beam shines on them
All

i.e. we are in the area of implicit processes

we immediately identify it as soon as we set such a task

and pay attention if this is a person

Well there are some health problems

begins to analyze

that's where the problem came from, right?

then from the point of view of action

the disease itself as information

Well, there is a healthy person

a person walks for example there he is quite healthy and happy

the concept of "walks" has many meanings

he goes to the store he goes like a person just healthy yes

"walks" i.e. he is healthy

i.e. he moves healthy

i.e. movement there and Eternal movement

but here too there is Infinite action

in a one-time movement is laid down

Infinite spectrum

i.e. it emits an infinite number of connections

in this regard, in relation to the implicit World, as it were Yes

where does gravity come from from this point of view

that all emit certain coordinates

and it arises

gravitational interaction level system

you can even calculate and influence gravity

if we simply trace the systems of relationships

how is it here

for example, one element is simply connected to another

these are like some kind of twisting hooks

i.e. a beam goes from one person to another

and so if we want to create

there is some kind of gravity system in this place

then we must create at the point of contact

Infinite number of solutions

as God does

It creates an infinite number of meanings well areas

that generate information

and they are folded into certain structures yes

but accurate

how does he make these designs precise

It just takes implicit processes.

displaces, for example, towards Spiritual action
those. towards knowledge
He gives them knowledge
and in logic, for example, an obvious process arises
manifested matter, etc.

i.e. the same can be done here
these systems are to be withdrawn
to the level of deeper creative knowledge of Reality there
i.e. to define them on the level of, for example, a creative-positive life

then they appear as actors
i.e. they fall under
it's not like they get there, they kind of choose management
then already there at the level of Macro-action
and begin to appear

so here is the main task after all
as soon as they start to get involved
as if in this management
anyway, if these are people, for example, then the task still remains
further level of their education
from the point of view of real participation in the process
i.e. this is an action
result
control of actions, etc.

and based on this it turns out
what if we talk about it
about educational work in general in the world
from the point of view of educational structures there
or education
it means that in conditions that there can be different people

different systems of action yes
and consider that this means an implicit process
any system can emerge, generally speaking
either negative
or there it is, on the contrary, positive yes
but let's assume that it's negative

because positive systems
they are often obviously correct

although it is possible that at an implicit level
contains a positive perspective and
and because there is an implicit level

We have the following priorities
i.e. such connections also need to be kept in mind
i.e. it is like some kind of help at this level

because the future is multiparametric
so that we can prepare ourselves
to the exact coordinate system
of your future
we must obtain the area of implicit information
otherwise what is the future based on?

but this is a system level
this is the level of the systemic fundamental plan
future
It is better if the future does not have any hidden areas, as it were
such harshly manifested yes

in such a way as to determine the implicit domain
it means we need to act spiritually
if possible, one must perceive with the Soul
means the action takes place in the infinitely distant future

i.e. when the Soul is in the Infinite Future
looks at the process
he this process is visualized here as implicit
i.e. we get pure visualization
i.e. Perception of the implicit domain

as soon as we get it
we start watching then
Why is this needed at all ?

for example, to cure a person from a disease
there needs to be a latent entrance of the disease into his body
as I explained
here he is walking around healthy
and suddenly some information appears near him
which affects the physical body
but this is information

i.e. if we consider a person
as an autonomous system yes
material system including
then it turns out that this is the input of some information
which influences yes For example there on the internal organs

or is it some kind of negative action with intent

built unnoticed by man
because he missed this action

so it turns out that a person should sort of control
your own input contour
from the point of view of absence
implicit processes of negative nature

yes there are implicit processes
in principle of some neutral nature
let's assume in the Infinite Future
some event will not happen
Well, it won't happen, so it's not necessary, then yes

i.e. there is no negative meaning there
it means because it's like inventing an event that's not needed
In principle, it can be invented
then it will happen
it's kind of a controlled process in any case

but if from the point of view
let's assume that it is the impact on a person yes
precisely as if a negative impact
it turns out that we need to control here
entry area
i.e. the area of formation
region of approximation of implicit processes
what do they look like
i.e. a sign, for example, which appears in the wave variant

i.e. it turns out that
so that the process is invisible yes
it should somehow merge with the level of the external environment
i.e. he should kind of replace her for some time

and then it turns out
that subtle entrance into the control system
means which exists in a person
and a very imperceptible impulse to the entrance

which takes well as in the video image
changes the real picture and puts
well sometimes there in detectives they use cameras there
the image is changed and put in
as if there nothing happens
and the video camera shows something like static
well, it's a similar process

therefore therefore it is determined
one property of implicit processes
it's thin, well, it 's excessively thin
against the general background of information flows
area yes
a thin area that must be included
into the control system
how to temporarily change the access level

to make this happen
but man was created by God
absolutely in fact untouchable
by and large

therefore somewhere from God's point of view
a person must allow it by his own free will
he should allow such entry yes

and here a system of human contact arises
his level of personal Perception
this is where the level of differentiation arises
and informing a person
he must understand personally
what is tolerance means well natural yes
those. harmless for example
and where does he himself allow access to him
why does he allow this to happen then?

because man in principle
from God, by and large, he controls all systems
and why does it allow you to enter, for example?
and for example, some disease will come true, yes
is no way for any impact to be realized there
or allows you to do so
to prevent some event from happening
good for him

what is this man's logic

from God's point of view
God wanted it and He did it

why does the difference occur
and in a creative sense even more so

and then it turns out that, first of all, the point is that

that I just said that phrase
that there is no negative plan for God here
and a person
i.e. He always does only creative Macro-creative

and a person perceives negative systems
and if he leaves these systems
as systems possible yes
i.e. he doesn't fight them
here is the first level at which he opens access to himself
i.e. he doesn't fight, he agrees
it means he opens access to himself

that's why the Macrosave system is there
the system of management through Macro-Salvation
This is precisely the system that allows
access in principle well how to close the negative essentially
this is how the tool works in this method

and we get that in order to cure a person
method
we immediately receive a treatment method
that it is enough to look through and analyze
where and when a person
well, if we are controlled by clairvoyance or Spiritual vision
when and when he didn't have time
there is something to pay attention to
he dropped something and counted
well , what does such a thing exist, well , so be it
well what can he do like maybe even like that

that's why I'm saying this by the way
that all processes are manageable
absolutely and truly so
because if we allow
that some process is uncontrollable
then people can really say
"what does this have to do with us " then

so it turns out we can't do that
technologically allow
to say that a person can't do something

then he must definitely
be able to control any process

ideologically even

so that the method itself works at all
precisely effectively Yes, it worked right away

because the method
in principle it can work on the phrase even
but the whole cycle was worked out
with a primary understanding
and the end of the logical action

i.e. the accuracy of the method's development
it is still one of the components
This is a logical system
beginning of action
actions
and the end of what happened was exactly normal yes
creatively
as it was wanted in the management goal as it was supposed to be
with Macrosalvation

and at the same time each element must be controlled
even an element of Spiritual action

and that's when you start to control
For example there are levels of Spiritual action
then you see it's very simple
how does the Spirit solve these problems
your own Spirit

The spirit is constantly colliding
with implicit area system
because there are super speeds happening there yes
at its contact level

there is a flight of creativity
where here where here is there any clarity at all
there is creativity and once and instantly some level

and here the main thing is to show that the clarity is in that
that the Spirit sees God often means
and it turns out there everything is absolutely clear on one side
from the side of seemingly sound logic
i.e., precisely the logic of the Spirit , so to speak

and therefore for certain levels
there is nothing there everything is filled
but logically when we see the Light of the movement of the Spirit
It is Light

in this case we are talking about
about the optical phase of the movement of the Spirit

we are talking about that
that it touches a lot of areas
which for us are in the logical plane of Perception
here we look with our own Spirit
there is movement there some silvery areas ^{there}
there may be different situations in principle
but as a rule, except for the dark ones
here the Spirit is manifested by light levels

and when will you recognize
here is the contact
these are ^{generally} implicit areas of high speeds
to understand these speeds using logic
you can take this area and manifest it
it will take 2-3 seconds ^{there} but that's already time

while it should be perceived in real time

All
we perceive in real time somewhere
doesn't matter
we always have accurate information
about what's happening

so it turns out in this case
it's in the Soul
in the Soul which is simultaneously with the Spirit
constantly working on it
so that implicit systems are not visualized
well, sort of in a negative way
Well, again, Perception is being formed
which is immediately fenced off
from some negative implicit systems ^{yes}

and this is the main problem of civilization
in this case, when implicit systems
as if unnoticeably ^{Well,} they will implement it
some negative actions

because if we exclude this option
then everything is clearly shown that there will be no war ^{there} , etc., etc.

but if we save

at least one entry element
it turns out that we admit the possibility
some negative action yes

then it turns out that we should
First of all, be able to overcome any system
even the thinnest one there

Well For example So we need to save the ant there
so what his well there wasn't a drop of rain there For example
purely theoretical or practical model

if a person passed by there he didn't pay attention
but for some reason he had an idea
that it is this ant that needs to be saved

because at this moment we receive from God
all technologies

How God Works

He gives meaning to a person
but you can get knowledge everywhere
sometimes in this drop and in the reflection

then it is clear that any action is obvious
he walked and he noticed that subtlety
which in principle is not
as if a convex system of Reality

Well , in Buddhism they are reflected in ancient philosophies
such control systems
somehow they are touched upon there

in this case i'm talking about
what in the applied aspect
you need to be able to highlight
segment where there are no implicit processes
precisely in Spiritual Perception and in Spiritual creativity

and here is the creativity of the Spirit
in relation to the Soul
once you get into this system
any disease is practically cured immediately
but you need to get into the right mindset
how to adjust the level

well there let's say a very complex system
when there is interaction between complex systems

when for example future information

which is coming to you
manageable
i.e. you control the future

then yes instantly you can very quickly
the question arises of how to cure quickly
or to quickly make events happen there

the question arises
how do you even convey it then?
why is there a cure time yes
or there time to reach

because it is a transfer of knowledge

if you sync
your knowledge with the knowledge of man
and it brings control to the Macro level
approximately well as if at your own speed yes
then healing really does occur
almost instantly
i.e. he understood and conveyed it to everyone in exactly the same way

God also does the same in relation to that
that they often recover from infections there
well, even some flu ones are not important
often and complex systems
many people

i.e. here
This is precisely the factor that manifests itself here
what one understood was conveyed to another
and a synergistic effect occurs

so the implicit process is also removed from control
if there is collective creativity

i.e. why do I always say so often
that through the system of collective Consciousness
if for example more people are formed
that resurrection is that action
which is available to everyone for example Yes
that a person is simply even obliged to resurrect there, etc.
this means that this system is gradually
it means it starts to squeeze out
especially such systems as diseases

because it makes sense logically
if a person resurrects
then what does disease have to do with it anyway ?
as if the logic works

although , well, in principle, these are kind of unrelated concepts
but nevertheless here is the logic of something more fundamental
as if more complicated as it is considered a process
then it prevails

although in principle
here in the information system
in the history of information development
this process is really not related

because a man who does not die
he shouldn't die
and therefore due to immortality
he can solve different problems different tasks
and he should never come near at all
to the concept there is precisely a different plan

he shouldn't die but he should mean
live happily and forever all
other questions as if this is a completely different area of information

but nevertheless, logic seems to be throwing over
this is a person
to the level of such a comparison
It happens like this, it doesn't seem to happen often, but it's possible , yes

hence
in logic there are factors of knowledge transfer
as if and comparisons of those elements
that logic gives properties to certain systems

Well how does it work out this way here
that it is through logic that quality is given
from the point of view of the person himself
i.e. a person sees in principle
reflection of one's Thinking

and that's when you start to understand this means
then you visualize very clearly
any super thin one there for example Yes
social or local process

i.e. you begin to see very clearly
that you need to lead there
a large number of people
who bring light to society there
Eternal life

then it turns out that it is enough to understand clearly
how does Thinking happen in one person
and then in principle here we have
almost all systems of action for others

i.e. to convey knowledge clearly enough
one person
which is as if on an equal footing among others
and that's all

but often it is the opposite effect
a person himself must clearly understand
and it's enough for him to understand and people follow him yes
but he must know clearly
see the whole system of connections
i.e. there there should be no implicit areas

the model must be clearly worked out and configured
well, let's say some kind of plan
but not in the plan described there
and where does the heart participate?

i.e. you look and see
what is the heart
participant or creator of this information
your heart
this is, well, this is precision
in this case the heart cardiac activity
i.e. activity from the heart is precision

and in connection with this
Well, if you look at the management leaders
who are engaged in
at the social level at the political level
They have a very developed heart system.

and how could it be that they don't think about it
or they just work more

at some specific levels of management
but nevertheless from the observer's side
it's visible
that the concentration of the heart's actions increases
in specific volume of information

i.e. if we take the information
from zero to one the axis is like drawing
and in the conditions of the action of the leader, so to speak
visible
that in some positions there is ninety percent of the work
this is information about the heart's action

i.e. it turns out that there are systems in a person
which may differ from the background level

because the carrier there is of an implicit level
this could also be a person
and we must be able to recognize it yes

Well how to recognize evil intent there, let's say
some effect on the nuclear bomb yes
or maybe if it is being prepared
some kind of political option like war yes
and such a provoked one there outside the power outside the people
by means of some kind of revolutions
and some evil intent some hidden action
here's how you can determine it

but it is enough to identify by projection
what are organs yes
is there even feelings by the way
it is very clearly shown here
a more subtle level
not even physical, not there physiological
and feelings enter into relationships

on a sensory level, it begins to be decided here
question of action of feeling
as a control and identification system
control systems

feelings as a control system
i.e. a feeling of freedom
feeling means saving the world
i.e. management is formed as a feeling

i.e. the same is perceived with the salvation of the World
on a sensory level as a feeling

and then the information enters the control phase
you begin to control the sensory level
through the sensory level, although logically
i.e. logic enters the sensory level
here it is as if in the latent areas

kind of has space
absolutely identical properties
in all directions

i.e. in the implicit domain
level of feeling
Soul level
Spirit
this is one space

that's where the advantage comes in then
Well as if opposition to the manager
what if the implicit domain
he also forms it in the access action
also an implicit system
he tailors his design to
in implicit space

and then it turns out that he can increase
the amount of energy that is concentrated, as it were
or there are actions
to counteract certain hidden processes

those who, let's say, are doing this or are suggesting it
then they are forced to manifest themselves

That's how everything works in the world
the more we concentrate the possibility of action
at the level of there logic of thinking
the less space there is for that
so that they can act as if at the level of technology
i.e. we interrupt further technologies
negative plan

and people kind of get caught
we push them out if they are people, for example
or maybe there are some technological events

we push it to the level of positive thinking

i.e. they seem to always fall into the level
what is creation

It's like they can't come back again
because we are growing
management system within the region
i.e. the implicit area turns out to be one
from the perspective of long-term management

and the more we work
the less there will be , so to speak, anti-creation Yes

and it turns out that in principle
stop it reactor there is a nuclear explosion
in principle it's quite simple
just a specific technology is enough
from the point of view of this approach
namely the management of implicit processes
according to my Teaching about God

just as God does on everything
not give any space at all, just explode
i.e. physically see this picture
and displace it with its management
and that's all

the main thing in this system is to stabilize
to the first physical plane that comes along
you kind of concentrated control there
it doesn't even have to be flat there
so as such in the physical world yes
may be a physical plane but represented

here is a flat effect it immediately brings all processes together
into the projection system of Perception of the logical
human
i.e. the logic works very clearly

in logic if on a plane
then it's just a projection
the projection no longer has the same power yes

and the projection system is just that
as if such a system of investigative action, in fact

it can be used to calculate the process
but it is clear that you already have time
that the person has not been harmed
because it deals with projection

but that means it is important for us to always have time yes
always have time for action
and this very powerful flat system
i.e. it is impossible to identify implicit processes
Well, we need to try not to bring it to a spherical system
because then they kind of float away there
and you have to sort of catch the information
projection systems in particular

and by the way, implicit processes are more like planar ones
i.e. they are sort of at the information level
approaching like some kind of flat wave
which seems to reflect
your own Perception on a multidimensional level

i.e. they simply change the multidimensional system to a planar one
this one is like yes sensor yes
this video camera
which plays the role of a real image
Well, in the case that I gave as an example

and how does it turn out that then for a person in principle
to make the process implicit
controlled and completely safe
it's often enough to just give it shape
Well as if mentally, as if bending it with a finger
and that's all

as soon as the form is formed it is immediately obvious that this is a distortion
yes
this is not reality
then all the person gets into his zone of control
into your area of control where the multidimensional World
this is the real level of management

i.e. if for example they say
and where is the control
there is Thinking there
there is a desire for example Yes
what is the difference in management
in direct influence on Reality
from the state of there Thinking of different states

it turns out that the difference here is precisely that
that a manager must have a process
here at the level of complete control of Reality
really complete control

i.e. just like God
He controls everything, completely and everywhere.
then you need to be able to approach this concept
and still be at the level of the Spirit
in the system of complete control after all
really complete control

then it turns out
here is a sign of these implicit processes
i.e. implicit processes are like some kind of spheres
who are trying to push through events
but they can't do it naturally
because the Spirit gives constantly
as if a more saturated control structure

i.e. the more events
the Spirit gives a richer picture of governance

and by the way why are events in the world increasing all the time
to displace implicit levels even more so
especially controlled systems of human development
arise

why do we need high-speed systems
that's logical yes
on the one hand there may be cyborg systems
which well there are problems there yes
but on the other hand civilization is forced
increase speed
because then we displace the implicit areas

Well, from a logical point of view it's clear
the microprocessor has more control
there are software tools
and less chance that it is due to technical problems
there will be a nuclear war there yes
not even connected to a person
means the equipment may not work correctly
This means we are forced to increase the resource
logically

from the point of view of information it coincides yes
I just showed it
area of information development
as such the control level
this is the one that any person knows by the way
Every person knows this level
which I am talking about

and if it is projected onto a microprocessor board
that means that any person in principle can submit a fee
and that means he can diagnose it
is it working properly or not

Well, maybe it's not necessarily the board
is some kind of technical system there
Well, at least there is an organism there
some situation, event, etc.

i.e. from God's point of view
God always shows man openly
what to do
the paths are always open
so in this case the person gets into
into your system of action
and he has the right to choose
or he walks on it
but when the way is too open
he thinks "well is it really that simple" yes For example
so this also happens

then it turns out we need to switch to logic again
yes if it's simple but it's right then you have to go there
not always the path is resistance

and in this case the implicit process works for us
i.e. which wheels do not wear out
if they are implicit yes
Well, it's such an abstract model.

i.e. if we imagine that there is some there
there's a cart , let's say a tachanka
or there I mean simply
I always want to create an image here
more like some kind of horse possible yes

Well , there is no horse, but we still have to go.
there in Russian folk tales
they drive themselves after all
well, not only in Russian folk tales in various epics

so it turns out that this is the task of movement
even if there are no funds
this is a task, so actions
coming from the implicit area

here's how to get from one position to another
we have enough of the implicit area
make the area the final goal

so instead of driving there for a long time through some field, yes
it is enough to take to reveal the hidden area
and say "the field is here"
the field appears yes
Well as if this is the level of a peculiar visualization of events

if we want to create an event
it's easier to do it from the area
where there are no events at all

then we don't need to think for long there
they took and appointed an event and it was realized
This is the most powerful level of control

i.e. if the implicit level seems to be approaching you yes
then in relation to you he is absolutely open in principle
because at any point of its control
you can assign your area

hence the implicit domain
she's not that big maybe aggressive yes

i.e. we diminish one of the positions of the implicit area
we are talking about the fact that yes, areas that are not heard
which seem to be selected unnoticed, etc.
Of course they can be, well, unpleasant
but they bring real problems
it turns out that in general they can't in the long term

why can a person live forever

because based on this philosophy
at all well, this is technology and not just philosophy.

This means that we can definitely appoint
implicit areas
some signs we need

i.e. we, for example, there we put it into control
Well, that's how they work in any school now
they teach the basics of programming there
that under the conditions of action of a certain set of a certain system
we set that there should be food
there must be good health
there must be happiness there eternal life yes
there are several positions

and we take this level all the time, as if we remember it
so we focus on

for example, it could be for creative development
all fundamental religions

there are fundamental concessions

i.e. as if we concentrate as much information as possible
we become attached to some known concepts
we introduce some universal human values
into the control system
and that's all

any implicit area is immediately blocked
at the approach level
because we actually label it first
then we give it the properties of this system
which are like a shield in front of them
costs

Well for example, how can you plow the land more actively?
you can make it loose after the rain
or you can just sharpen the plow yes

so it turns out that in this case we
as if we were sharpening a plow, in fact

but so that there is good wheat
we need to think some more
as the plow enters the ground

from the point of view of non-destruction, yes

the problem arises how to do it
so that the action of the plow is non-destructive
it is the wheat that gives bread yes
i.e. the final action
and the earth which does not perceive this action
like destruction
cutting with a plow
this means and therefore everything still depends on the Perception of another
system

this is how we can pass on education
through its very specific systems of action
when another system does not perceive it
the action is like , well, aggressive

and here we get the answer
how to re-educate such systems
make them positive

It is enough that the system itself
recognized our actions as constructive
in relation to oneself

so when we lay down such a system
in management
By the way, in fact, this is a very powerful education system
which allows you to act in those cases
when education is considered impossible yes
so people are sleeping for example
people have a different point of view
also by the way one of the signs of implicit processes
i.e. is he a human being at all, for example , if he has
a completely different position
another point of view
it doesn't touch at all
with your area of control

so how can he be taught
say what well set a task
understandable Macrosalvation yes logical task

and if he is in another country
or is he there sleeping or generally busy with something else

then it turns out that the transfer of knowledge

this is formation again
again that basically implicit area
through which a person configures his events

i.e. we create an area actually in front of it
as one of the technologies
and he always ends up in this area
to your information
Macrosalvation

for example, so that in this technology
spread my Teaching intensively
then I have to, well there we will say to give more lectures
so that there is more information yes
give more control
where a person configures it himself
this area yes as if it were implicit for him now
multiparametric
well, in the creative aspect of this concept

because the implicit aspect as I said
it has, as it were, exactly this level
and there is a creative one there and all future processes yes
and as I showed
from the implicit aspect which is not creative
it's very easy to protect yourself
there are no problems at all in principle

and what's more, we fulfill our task all the time
i.e. we do not deviate in any way
i.e. it doesn't even stop us
however, we are constantly working
because this area of information yes
implicit processes
it becomes completely manageable
here is the technology

for example on this
Of course, you can use other technologies too
but this technology is just targeted and applied

here from the management point of view
try to do it this way

all future processes

Well, in a multi-parameter future, yes.
to reveal as an area of creatively implicit systems
and identify in the connection configuration
"explicit - implicit"
immediately to the explicit level you need
i.e. very quickly

the process is very simple
you need a good better future there
Eternal life
health
happiness and what about everyone
take this line once and reveal

because she
at the level of implicit processes it shines very clearly
and there where are the undefined systems
bring it a little closer to you
even a little bit
and everything starts to come true for you

this is one of the technologies of applied technologies
of this management method so to speak

This concludes today's seminar.

Thank you very much for your attention
