

GRIGORY GRABOVOY
The Teaching about God
**Accurate control forecasting
any process**
14.10.2005

Hello
the topic of my seminar today
this is my Teaching about God
Accurate control forecasting of any process

in this topic i show
how does the person who reacts
to the external information of the World
it combines the qualities of control
for any processes
i.e. any situations
including event situations, let's assume Macro level
some specific technological situations
where are the complex technologies

for example, a person who passes by a factory
he can perceive
the complex technological processes of this plant yes
in the development of, for example, control forecasting

in this case we are talking about
about the prognostic phase of the leading event
it must receive a generalized signal from all events
perceive the structure of external development
what does he perceive
in the form of, for example, detailing yes some information
and at the same time project
my personal yes For example event plan

i.e. in this case I am talking about technology
which takes into account any actual signal

and with all this we must be able to
virtually all signals
translate into the structure of visualized Reality

i.e. when the visualization is practically like this
that we clearly define our own path
in conditions when there is no need to go into detail

i.e. on the one hand a person is not obliged to monitor there

your own every step for example Yes there in the future
or control literally in detail
some movements of some objects of information

and in the case of, for example, protecting people
First of all, we need to prevent the information from being released
or there is the beginning of its formation

so here we are talking about that
that the level of Perception remains normal
namely the event level in humans
he is improving
due to the fact that the system of external Perception
it increases quite sharply

i.e. it turns out that the task here is actually as follows
that human consciousness
Perception
perceives as the external structure of Reality
at high speed
and some fixed one
as if the internal structure of Reality
the one that is called the event of a specific person

and that's when we talk
It is about this main part of the management
predictive management
what is a specific person's event
for example, from the point of view of knowledge, yes
these are some specific situations

and from God's point of view
This is the situation that God must form
in the human mind, for example

and then we start to consider
Human thinking in relation to that
as God places before him and has already placed
information structure

i.e. for God there is Action at the point of control, for example
and there is also the fact that it has already been done

i.e., in fact, God is confronted with that

that He constantly seems to increase
Well, let's say it's an optical filling level.
informational some material level
repeatedly

His every look, His every action
at any point brings the same thing
to the point of the event

where future events already exist
because all systems are connected
it means it acts on some other system
it turns out that the same event occurs here, etc.

and this is how such high control redundancy is obtained
where management is expressed in the structure including Perception

i.e. we can assume some word
perceive on a different level
there at a higher speed
some on a slower yes

here, pay attention to the structure of the words
defines the structure of the event quality

if we perceive the word, for example
at a higher speed
and put it into sound form

For example Well a big one or something event density
i.e. an event that determines the structure of the development of a word

then we get let's assume a more predictive phase yes
if we work with a word, for example
in the fixed action element
then we can get more
phase of reliance on past events

and therefore if for example we perceive
the structure of Reality in this way
that some part of the event relates to the structure of the future
and some to the structure, for example, of the past or current time

then you can see that in the projection, for example , on the word
event systems
they basically work in about the same way
how is God's Action in one point of control

just an element of action is already investigative
i.e. the word gives birth to investigative systems it turns out

and if we want to describe a process, for example in management
it is clear that people are implementing
any investigative systems ^{yes}
any object of Reality can have development
there ^{For example} in ultra-long-range control

in this case i'm talking about
what is at the level of Perception
^{example,} what mechanism is it advisable to use?
so that this system ^{of external ones}
neutral, maybe even ^{random} impulses
try to translate
into the structure of precisely the controllability of these impulses too

i.e., doing your personal task
a person should not expect
some kind of surprise, ^{for example} , from that
that it does not differentiate the movement of molecules
there in some third galaxy ^{yes}
by physical account
if he looks with his eyesight at the starry sky

i.e. here it is necessary to define very clearly
parameters of physical perception
what he sees with his eyesight

and at the same time he must understand that the process is controllable
and he controls this process personally at some level

i.e. at some level
^{for example,} spatio-temporal connection
where ^{for example} the light of the star intersects
with a look ^{yes}
or there with Thinking
we can find a point of control

i.e. physical light of extremely distant objects
at some level is controlled by the light of Thinking
and here is a thought that has, ^{for example,} an optical expression

then we begin to see that the whole outside world
it has a certain level of stability
largely due to that
you could even say in everything

but this is an absolute characteristic
she usually always goes over
on the relative concept of a specific person

and then he thinks that it is really possible to influence
if you know the distribution
these lines of fixation of the external World

i.e. any micro-event
projected into the system of super-remote events
and a very simple technological technique then

at a very great distance from a person
event there the light of the event always manages
in general, thus be transformed
that a person is practically well there on time on time
can change some event

so the method of control in this case
this is the ability to translate
any uncontrollable events

For example there are micro-substances there
to ultra-distant objects

then it is clear why God built the World there
simultaneously means at the Macro level and in the microsystem
i.e. this is precisely a way of controlling any events

and we can enter here
in the structure, for example , there are micro-substances
there is an atomic level
any connections between the elements of Reality
and exit at any point in space-time
due to the structure of Thinking

you can also exit
in the structure, for example , there near the physical body of a person

and now if we take a closer look
space and man precisely on the physical level
then here you can see what it means practically when we work
at the level of action there in Infinity

then the status of the human physical body
it's almost the same status
that all the information that
for example, it spreads from the physical body

into the structure of the B infinite level of information
this information is more light than a specific action

i.e. the physical body radiates
like the original well let's say some kind of relic light
which is spreading
at the management level there almost the whole Reality

and it turns out that when we start
this light as a universal value
consider in detail

for example, we decided to consider photon levels yes
i.e., we took and selected the element of light

and looked
how does light propagate in relationship
for example with any external event

then it turns out
if you delve into the structure of this management
and moreover, to see that there are systems of acceptance there
at the level of collective Consciousness
there is rejection, there is opposition
in the conditions of, for example, Macrosalvation
when it means enough funds
there we assume the same macrodestruction

the system of development of the personal light of a person
naturally meets another characteristic
which corresponds to the concepts there
let's assume there is "cessation of life activity"
some "destructive systems"

that's why this light
it turns out that I have to overcome the structure
that phase of a kind of collective Consciousness
which actually well requires reform
often not directly there somehow
for example, in the form of verbal actions, yes
and due to simple management

then it turns out that if we enter
into the management system as ideologists
which have as if inside this light
also the light of the Soul which has the Eternal status yes

that is the connection of the Eternal status of the Soul
with a physical body
it is the action that determines
any event spatial structure

i.e. if you take a closer look at this phenomenon
it turns out that the Soul is in interaction
in the goal so to speak management
forms the physical body

i.e. it is immediately clear how it is formed
Physical Body of God
this is interaction with the entire external Reality
based on the fact that God defined the concept of "Eternal Life" yes

for Himself being Eternal
He can, for example, define this concept in Himself

It is very important here that the concept is defined
when is there structure at all in Reality

i.e. in this World let's suppose to say a word
Means well, the one that doesn't exist
or for example it cannot be in Reality
practically such a phenomenon in this understanding
that if the word is formed then Reality can be

and it turns out that based on this
we are recording the following here
that on a verbal level
event control
this is the management of the word that forms control

so when we work with the word
there should be a light similar to that next to the word
which comes from the body of a person

i.e. the ability to see this light
which forms
let's assume the external system means the World as a whole

i.e. the outer galaxy
the outside world
Inner World
if you want to look at the surface of an atom, let's say
you can see
but then you need to look in your direction yes

towards the substance of the material substance

if you want to see what the whole Universe looks like there
then you have to look from yourself

i.e. there are specific technologies that allow
practically very accurately take into account
control system

for example, due to the simple physical orientation of the controls

i.e. when a person changes the management structure
just by the fact that it changes the point of view , as it were

and then it turns out in connection with this phenomenon
let's say fundamentally defined
at the analytical level there is no practical experience

It is clear that every person
which makes movements there in the physical World
it also affects the structure of the substance as a whole

and by the way it influences quite accurately

basically that's the gist of it
precisely in the ideology of Eternal development
it always has a precise influence on the structural series

for example , he switches from this ideology
the structure may contain final events
then it means that elements may begin to appear in him
which, for example, do not correspond to the full accuracy of the process there

and in the conditions of predictive management
where precision is needed
it is the structure of the movement into Eternity that is actually
This is the value that determines the accuracy
in this concept

because Eternity is still
including any combination of events
but besides everything else, this is life
here the structure of life is defined in the understanding of Eternity

if we consider , for example, the life of a person
and we will try to determine
how is the concept of "Eternity" expressed in general?

then this concept can be expressed
only in human life
and beyond this concept beyond the concept of human "life"
We don't even have a system of criteria

because the system's perception
For example Well some concept
this is both the concept itself and the system itself

if there just exists some planet
and some material systems
how to determine the structure of Eternity yes
you need to comprehend you need to have life

i.e. it turns into a transformation into life
this is the future of any matter

and based on this we have practically
Well the next fundamental law
against which naturally
there could be quite a serious struggle
from the side of those, say, analysts or forces
which perceive more mass of matter

rather than the structure of, for example, a single manifestation of life

here is a very unique spiritual value
comes into effect in management

for example one Life of God
gives Infinite life to the whole World

and it turns out that the Law is very clear, yes
here everything is immediately obvious

it turns out to be a phenomenon of one Life
naturally much more important
than the phenomenon there of an Infinite amount of matter
but where the characteristics of life are not manifested
as structures of Eternal development

and it turns out that we see the following connection
what is development
the development of all matter towards life
this is information, as if even "understanding" yes
in quotation marks you can often use such a word
of any material system

what is life, for example , a human life

and now if we look at this structure from this position

then it turns out that the external substance is yes

as if collecting information

by interacting with life

For example there, for example , among other things

from the point of view of some possible destruction

i.e. if we understand the external as if it were a substance

as a system of some kind of life research yes

but from a different position

we can find characteristics

and systems well kind of peculiar or something forms

for example also Realities

you could say there is life there in a certain sense

then we cover it with the concept of "life"

all systems including those

which for example do not apply to this concept

from the point of view of let's say orthodox biology, yes

and or there biophysicists suppose

and when do we start

based on this well in a global context

see

that as soon as we spread the concept of "life"

the concept there is even more so of "Eternal Life"

then there is a very precise mutual understanding

on an intellectual level, too

in general, when interacting with any system

there appears an element of some kind of intelligence

which already defines a kind of chaotic level of matter

i.e. if we consider

that there is a certain level of interaction intelligence

what generally keeps you on the information level yes

space-time so to speak

there are such concepts as some "field spaces", "information fields", some "higher intelligence" there

Well is introduced or is there a higher intelligence

then right here, this substance of Consciousness is visible

and the researchers get there

that's exactly in the structure of interaction

where the interaction takes place
life and external matter ^{yes}
where life is the very substance of life

and that's when we start to investigate
this is the process or how it looks like
precisely as a structure for accounting of factors there evidence
that's exactly when the process of life itself
is being investigated
the subject of life

i.e. the element of life produces analytics of life itself

then here we see that here is already happening
complete control over any form of substance

because here at the level ^{well} some kind of postulates of action
precision is needed from the point of view of life ^{yes}
but from the point of view of life
the action of life is precision

and when we start to consider
this process
as a system ^{well} some concentration in management
then we get any exact event
not because it happened there
^{Well} at some banal-precise level
what did the man take and see there
some kind of picture and all this happened ^{yes}
in Reality
Well, that doesn't ^{really} mean anything

because you can look at the situation
^{as if} by physical sight
there is future or past
this is confirmed

this is just about everything you can say so
from an outside observer it may seem that way
that this is a preview option

and in fact
in general, if there is a calm level in the future
then it's still management
i.e. there is of course a deeper context there , ^{yes}

in essence, precision is still called structure

which takes into account the maximum Macro influence
maximum macro-creative influence
to the whole world

i.e. in this case it is meant
if we consider the Action of God
then His Macro-creative influence is precision
from a human point of view

if you think about it
what is the accuracy in understanding God and man there

this is the Action of God
and awareness in human perception on development yes
practically well if you approach it analytically

and if from the point of view of the logistics of the Soul's actions, for example
then it turns out that here we have
more unification at the conceptual level

i.e. God thinks this way
that Eternal development is necessary
because He is Eternal
and people know this and think the same, for example , yes
but they are independent, although God is the Creator of man

i.e. this is where independence arises
when meaningfulness arises, it means Perception
own essence yes own task

then it turns out that this is precisely this Perception
it also forms the accuracy of the information drive to itself

because precision is not only in that
that we look at something and just react
naturally human
brings some information to itself somehow
somehow differentiates it

and it turns out that it is the information drive
this is also quite often in general even the main aspect
in the action of interaction with the outside world

therefore, a prognostic study
control precision
it doesn't just mean as if an external fixation of the moment
it is also an understanding from the point of view of information

what a person will be dealing with

there is some object in front of him yes For example
he must take it in hand
this is the internal structure of this object
Means interaction
of this item
with the structure of external Reality, etc.

i.e. it is still a complex of certain concepts
where the concept of "accuracy" is the concept of control
precisely on a global scale

and first of all, among the technologists of Eternal Development
this is the main characteristic
the action of the Soul of man is precisely in the Eternal development
and in the physical body
and the physical body

i.e. if we consider
development in the physical body yes
Souls of man

as well as the physical body
where the body is considered as a structure for the development of the Soul
it turns out that we have a set of events
where the external one is sort of watching the situation
it's just for the sake of it like some kind of contour
on control optics
which means practically implies

that this very external view
it is built
the structure of this True deep life of man

i.e. human life has a very deep level
which corresponds to life's desire for Love

i.e. life is always oriented towards Love
it can spread develop
towards Love
and that's what happens

and at the same time, for example , we can watch this
as for the structure, that means including well such
which may have external control

pay attention here
that when development goes towards Love
external control system
it has a lower speed in practice

i.e. to control the development of life towards Love
practically impossible

i.e. a person can only do one thing
what to implement yes Love itself
as God did

and it turns out that there is a certain substance
what if of course you reach a logical level of understanding
start doing analytics
then you can control the process
as if in a logistic management model
but then it will only be part of the management

and we are faced with this all the time
that when we talk about management
what is possible there is simply theoretically possible
that a person still does not control some part of it
in management
what is natural
i.e. logically it is completely natural

and it's absolutely clear there
the level of human common sense in action
this means that the management structure
gives accuracy in knowledge all the time

i.e. the person who is engaged in management
precisely from the point of view of direct vision of the World, for example Yes
this is naturally a person with direct vision
and direct vision is common sense

i.e. the direct meaning is yes the meaning of health
i.e. when we start to react like that
then here is the level of health recovery
Well for example , a person could write something there, there is something

at this point maybe well there be some problem
at a nuclear power plant
although it may be far from certain Yes
up to a hundred kilometers from a person

however, this is a specific case
he should still carry out the control immediately
and at the same time his behavior
accordingly it should be normal yes

i.e. here is the concept of "ordinariness of action"
the concept of "management structure"
this is what forms the social system
are no certain orders in action
some kind of behavior or rules of behavior

i.e. based on this one can very clearly see
at the level of collective Consciousness
that in society it is still unfavorable
how to influence the situation
based on your resource simply

because not every person
even if he sees the situation there in full
will somehow influence her socially
because they can just do it, for example don't listen there
or let's assume he doesn't have time there, he has a lot of other things to do, yes

or is he just in the conditions of Macrodevelopment there
it just decides
an even more problematic situation there in development

i.e. here it turns out
that based on the task of control accuracy
you must strive to achieve all the time
still the maximum universal level of your light
at the level of any level of management, yes

to the level where you can exert influence if possible
on any design in this life
from the point of view of Macro-creation

but here we have to take into account
what is in collective management
any element of Consciousness has equal characteristics

i.e. if the person there does not have the technology and does not want it
let's assume that in some region there it was calm
or was Norma there
then his Consciousness has equal rights
absolutely the same ones

like a person who wants it

and it turns out that the task is that
to bring control to the action level
only from the point of view of the logical level
i.e. the transfer of knowledge that provides specific practice
for example there is Eternal development
or practice for example help yes
which a person can provide there to himself and others

that's why here you need to look at the management first of all
for example, when managing social systems
how many people
For example, they don't accept such a position there

Well a widely held view
if there we are talking about technologies of Eternal development
that this is an element of overpopulation yes
Well such a kind of neo-fascist even
maybe in the modern age when there is an opportunity
nuclear destruction, precisely
it's not just neo-fascism anymore
and the system is precisely the possible macrodestruction

and when such a philosophy is assumed in the collective Consciousness
begins to project
that there may not be enough resources, space, etc.

then accordingly in the collective Consciousness
this element is starting to come out
in the external control phase
and in the structure of life process management

for example, if you think about it
how is it formed
at the level of collective Consciousness, such a concept is there
as the "death" of a person as a kind of destruction

this is also an element of the combined action
the aggregate level of action of the collective Consciousness
built for example on the Perception of the final action
distant galaxy

i.e. some meteorite is flying
Consciousness records pieces of movement

and thinks that there is ^{well} i.e. perceives
as if the final size of this World ^{yes}

and then it is projected
on the system of the human body
then addiction occurs ^{Well} as if by forms
let's say so you could say final objects

i.e. here through the forms of finite objects
the structure of certain endings in phenomena accumulates

and this is the general statistics that a person observes
it turns into something ^{like} there is a development gene
begins to accumulate a structure of uniform shape

i.e. it turns out that a person there does not age
it is enough to just correct this database ^{yes}
this accumulation system is precisely in the ^{gene}

and then it turns out that the person will not perceive
these are the final systems of development
and then he starts there
^{Well} at the level of simple physiology, ^{for example,} to live constantly

but the question is not only that he lives there
Means because physiologically he can live forever

after all, there are events of some catastrophic nature
are there any other specific ones
event- ^{like} random things

and here is the task of precise control
it is a skill at a specific moment
apply a system of exact knowledge
where you choose your personal path

after all, God also initially had a personal path
He also goes His own way, ^{yes}.
He has to make decisions all the time.
for the whole world

a person must also make a decision
all over the world
but also for the whole world

the only difference is that God has it for the whole world
the man is already in this world ^{yes}

but the difference is basically small
here is the essence of the action
there the action must be synchronized anyway

and it turns out that based on this
we get a management structure
that this is precisely the task of choice, the task of precise choice
in the system of Eternal development
in the system of precise control forecasting

it's a task to see the next moment in time
and not just see
It would be nice to see it in its best form, though .

and for this you sometimes need to think
and make preliminary control
so that we can practically see
what happens in the system as if in an event-driven form

and then we can manage the processes
before they started organizing

so it is natural and also the ability to establish a form of management
some event
to myself specifically yes to the body

i.e. it turns out that when we start working this way
that it is the summing up of information
to the physical body of a person
this is the action when we consider
as details of future events
and accuracy in relation to oneself

then we can see
what exactly are we doing in this event
i.e. what is specifically manifested from the point of view of our action

and that's when we start to look at this substance
we see all the external life there is the internal life

i.e. human life in action
exists in general in an inseparable level of connections
with the lives of all people
all living things so to speak

i.e. "life" at a certain level

this is a very specific personal concept of a person
exactly that concept and even that substance
which contains

all elements of life Reality

just like God

Yes God contains almost all the elements of life
all elements of the manifestation of matter
and the difference is again only in that
that God just did it first and that kind of management

here it turns out that based on the management of, as it were, further
Here is an account of all factors
this means the development of life
the simplest option in this regard of precise control
consider in prognostication
that life is developing, i.e. improving

i.e. this level of control is what he is talking about
what we see is the following picture
if you imagine that a person is flying in a helicopter, for example
and he needs to fly through those so-called wheat fields
where the wheat is taller yes

first he flies and sees
this life that is developing more intensively
but his task is to convey life
he must owe something
so somehow cultivate this wheat
so that other areas also have the same growth

if the task is to ideally develop
and she stands like that in front of a man at Infinity
so this is the growth of life in any control system

when we talk about a person
then there is a status there initially
the necessity of its Eternal development

i.e. we can't afford it
for example, it takes a long time to teach a person
so that he may live forever

here is a person if he appeared
he must live forever from this moment

it turns out that this is the task
transfer of knowledge transfer of information
to a person it happens in a completely different way
than there to other levels there ^{yes}
and information systems
in terms of action

so here based on the level
well, like Macro respect for a person
when a person perceives information as a whole

this is exactly the detail of the information
where the wheat grows
there what knowledge even exists
transfer of knowledge is a level of relationship
i.e. knowledge is an attitude towards a person

and when a person perceives knowledge
he is free ^{yes}
i.e. he may or may not perceive them
it's his personal business

well, for example , when he goes to school or to college
he has some tests and grades there
as if the level is expressed only in that
what he must master
and the level of action is determined by society

but it turns out that within society
if a person there does not want to study a certain subject
so there are external laws
which have practically come together and are clear
that he must learn something there

here from God's point of view
if we consider this process
for example in the process of His ^{yes} Self-knowledge
God
what is God's thing
as well similar or something development models exist
or Perceptions

He has knowledge from the beginning
then what does it mean for Him to be in such a situation
go to school there ^{for example}
and learn something there
within the framework of the social model

Well, if we consider this, well position yes God
there from a human point of view
then it turns out that God has a task in general in this system
Well there for example , there pretending that He is teaching something there
means to transmit knowledge all the time
it is about Eternity and Eternal life Eternal development
and as if with all this

He understands that He does exactly the same thing.
i.e. He then
then He begins to teach , as it were
i.e. seeing that others do it
He does just the same thing

and the concept of "training" is something that others simply do
i.e. He does well as if similar yes

it means that a person must learn what God does
it turns out to be extremely simple
we need to do the same thing

and that's when it begins
this is the dialectic of action yes
Well, well I still took such a simple model
which gives all human systems of development

the only difference is that
that a person is in some action
gets precise development

not because he's somewhere there well we will say that he is not mistaken
in some places
Well there may be completely unimportant things there
and because it develops accurately
because he acts like this
how does god work
i.e. it acts similarly i.e.

and at the level of ideology
this is still the structure of Eternal development

and therefore as a specific management practice
look at the next status, it's there
not only there that somewhere there
God walked by, for example, and looked there

made similar

but another person also has this knowledge
i.e. look at how to act exactly the same

for example, there is a professional who owns
it's good there somehow
there is driving a car yes

basically if it means well is going
you can learn quickly there, for example Yes
similar action, etc.

just by observing yes 5 minutes behind him

and therefore it turns out that the situation here is like this
what exactly do you need to have
exact similar action
which is in principle universal

by and large it is yours personally
but the one that is as if in the Infinite future
where you already know how to do everything anyway
you have complete control over the situation

and now try to make the management at this level
means interaction
with God
with people
and controllability from the fact that you see the light
namely the Infinite Future
which is projected into precise action

and not that you should
there is definitely a solution to this problem
namely, in the accuracy of your action as such in general
here in the absolute understanding of this World

and that means well as if it were simple even in logical terms
this is the Health Norm, the Event Norm, etc.

and this is not necessarily a specific one
again, I want the management to be exactly like this, all-encompassing
simple control in precision
positional precision structure

so you work now and I will work with you

and here in this work it is necessary to consider
such a level

when we look at an event

Well some negative plan

except of course some radically negative ones yes

it is desirable to always think exactly like this

then how problematic are they anyway? for a person

this is real from the point of view of the absolute Truth

the exact position of a person in this World

i.e. man is created

Endlessly evolving Endlessly living

and can there be positions at all

which are logically problematic for him

with exactly correct development yes

but by and large it's the same as God

that's where God created the world

in general, what is actually problematic for Him in essence

It perceives any external element.

as an element in general of His own Action by and large

always of His own Action

or there is another person who is personally developing freely

and it turns out that He gives the status of freedom to the individual
to another person

just as He appropriated it to Himself yes for example, primarily

i.e. the status of freedom that God gives to man

it is no different from the status that God Himself has there

otherwise how would He have passed on the knowledge then

and it turns out that based on the level of action

we see that in all negative

so called yes aspects of being

there is some kind of peculiar wave or something in action

where there is a structure of sufficient calm

like analytical or something such

maybe more basic

level of human action

where a person is sure of that

that almost everything that happens for example Yes

this is that Norma well for example, which he sought

knowing the situation from the start

i.e. begins to look at his structures of Thinking
and realizes that he already knew it anyway

moreover, he can clearly remember there
and those who simply make conscious decisions
they understand what will happen
and what do these people expect anyway ?
when some actions are performed

i.e. at a certain level of human analytics
and this is precisely the area of only man
the control is absolutely precise, please note

because here is the structure of Thinking
is quite clearly recognizable
none of the thoughts can for example
as if born from nowhere
it is always in the sphere of human Thinking

and with all this, if for example there is Thinking
there is an animal's reaction, for example , there is a dog's reaction, yes
where the structure is aimed at the possibility of action of the dog itself
in the field of telepathy
or through the projection of the whole World
the dog can also configure the support system
on myself yes and hold the outer space of the World

basically the same as what a person does there
but a person begins to see that knowledge is being transferred
to other systems yes
management or life so to speak
in other types of life there at least
there at the external level of analytics

then this action begins
Means in understanding this process
then the difference is that
that a person possessing, let's say, that body
which allows you to build mechanisms there
It differs precisely in the capabilities of the bodies

and if we start thinking about Infinite development
as a structure of a life that brings people together yes
then at a certain level of development, for example
there for example there is the animal world at least

ideally if so this is how to develop a scientific concept
this thought
can it then influence the shape of the body , yes my

so from this, from this position well so that the shape of the body is as if
as an element of the development of some other mechanisms in this life

from the point of view of this process
Then why did God choose this particular body ? human
for example, there is, well maybe there
more let's assume better logical constructions simply
some kind of instantly reacting there

take there suppose a perfect robot
and you can say what he can do there
something more optimal there

why exactly the form
exactly somewhere there in social conditions yes
the robot can be more optimal

but it turns out that why exactly this body
why, if you think about God's task
it is clear that there are external projections of all matter
Well you can simply calculate it simply even in mathematics
according to the theory of large sets there
and consider what the projection gives
human body
all outer space
Well physically there geometrically

and if we consider
Well let's assume a different version of the management concept
Well Mathematics is also a structure that is introduced there
due to, for example, the reproduction of God's Thought, yes
one can consider one thought another
and see all the math in between

i.e. if we suppose to look at another thought here
mathematics is completely different

and if we start to see this management
from the point of view of how God approached the idea
there to create exactly such a body

as I said that with Eternal development

everything in the direction of life and the human body
can be developed

and Eternal development is necessarily realized
i.e. it has already been implemented in many aspects
the only question is whether this will be confirmed
in the system of collective Consciousness
that such a generalized thought exists at all

after all, the only question is
that this idea should be accepted
and that's all

and then the percentage there is about a hundred
practically in certain places and regions there
it is immediately realized

it's just a question of accepting the idea

and it turns out that it is precisely the opportunity to accept ^{yes}
that's exactly it, maybe not even your own thought, ^{so to speak}
and the thought is reproduced freely
i.e. ^{for example} the thoughts of the Eternally Living People

determined means that God created the body in this way

where the structure of thought expresses the level
and complete control and complete freedom
and body structure
she expresses it initially

i.e. the body must be created like this
that to have a complete system there personal freedom
at the physical level ^{for example}
a complete system of absolute freedom of action
there in Eternal development

and so in this regard it turns out
that there is more embedded in the body, ^{as it were}
namely the ideological system of Spiritual development
there at the level of precisely the Infinite full there Eternal development

i.e. the element of freedom of the Spirit
freedom of physical human action there
and was perceived by God as not His thought

because God always had a task from the beginning
He created the world
but how to make an external system like this
so that she would be absolutely free from Him and from the Creator
but the same in terms of Eternal development

God knows the benefits of Eternity yes
He wanted to convey it naturally
and He transmits precisely and will transmit into Eternity
which exists everywhere

then it turns out
what is it, and this is precisely the influence of this freedom
these are their common bodies
Well i.e. the shape of the body should contribute to this

the idea that God has about Eternal development
He made it come true
by the fact that He expressed it
and the word yes and Action
or there technologically created the Eternal World
some kind of process
need to observe Infinite time
even logically

this system should be like this
so that people have the same

and their Consciousness element was the same in status level

every person who reproduces
there is your own thought
there, for example, he creates a whole World in action

and it turns out that when we start
react to this system
then it is clear that the dialogue there is absolutely direct
between people and God
it is built on a system of, as it were, internal qualities
there is God and man

and considering that God is also a man
It means it is expressed
precisely the human level of development
for the transfer of knowledge there for the universal Eternal development

then it turns out at a certain level

there is no difference in terms of action
and the World becomes universally Eternal

and here we get
the first completely ^{final} signal
accuracy of action of predictive precision
precise level of action

from here the first optical signal is obtained
which comes in a completely laconic manner
precisely in a harmonious aspect for a person

this is where a person's good future usually comes from

i.e. precisely in the connection
these are the aspects of the actions that I spoke about
in terms of Eternal development

when do we start to do management from here?
to this impulse
then we see that when approaching this impulse
everything is getting even better
i.e. they don't even ^{really} need to be managed

i.e. there is a certain level
which is originally expressed by the Norm
there God initially recreated everything in the Norm
in his own mind
and in the minds of people

and when we look
on the structure of human action and life
then we get what we practically see
what does a person get
that degree of reaction ^{for example} from the World ^{yes} from God
that he is in his own size, ^{as it were}
in your own life
has complete freedom
because he can simply feel himself there

self-awareness
this is the level of absolute complete freedom of a person
projected onto physical Reality

It is one hundred percent clear that he can always be free
always there physically can always be free

if he wants, ^{yes}, that means if he needs it, ^{for example}

maybe it's always healthy there
if he spends some time there for his health
and can always, ^{for example}, save someone else there

i.e. here are certain attributes of his own glow
that's where I started the movement of light from the human body
exactly the light that contains
as if it practically holds the status of the whole world

this generally looks like it's at the management level
that the whole world
it all depends on one specific person
on each one, moreover

and if we start ^{to assume} Well think
This is exactly how to look at the position of this World
then it turns out
how do they even intersect ? People
the whole world is projected
he holds it on his shoulders
another one holds the same thing or with some variations

and here is the system of intersections
how do they reach each other at all

i.e. it would seem that it should be
some kind of Infinite space
and everyone is only engaged in what keeps the world, ^{yes} on myself

so here it is
it is precisely the desire of one person for another

this is love ^{yes} this is precisely universal Love
and it is precisely Love for everyone
This is what brings people together

Only on the basis of Love do we find
practically these are the levels of interaction
and the whole outside world
becomes one universal World

here are the elements of the intersection of collective Consciousness
as if one with the other

and it turns out that the control precision

this is firstly an understanding of this point of view
what yes the whole projection of all information
per person

and he is really responsible for the events of the World
Well to the best of their ability there, or what? situations in many ways

within the scope of the tasks, of course
everyone initially strives for Macroregulation
in terms of Macro-creation
even if he is really bad there
it would seem that there is sociality there
Human
or there is a very good one

nevertheless, he still has a task initially
so that the World exists if it is on Earth yes located

that's if some movement starts there that is not balanced
Well i.e. there is no balance, unbalanced management structure
where does a person begin to commit
some well as if not the same from the point of view of others
actions

this means the process is somehow deeper
for example, there are questions about terrorism
Terror may be a more general concept yes

so changing the word narrows the spectrum
i.e. it is an element of Thinking
who does he think he is

there the terrorist is the one who attacks
or maybe a follower of a certain idea
or just one of many
who took part in some combat operations

i.e. the management structure here is very specific
here is his inner world
perhaps this is a breakthrough into the system of the collective World
Well as if people living peacefully yes

if you do this type of analytics
for example, from the point of view of precise predictive control
where we look specifically at aspects of life

then it turns out that maybe he just didn't have it

given enough L yubvi or even methods
to live simply in an ordinary world where there are no weapons
and he ^{kind of} breaks through it from the side there
his sphere is trying to penetrate
into a more general sphere of other people there
then he needs a weapon, ^{yes}

so here is the analytics system
it turns out that it is built like this
what if we start thinking
how can this person be stopped then

but then we need to give him a path of action
the path of action is to help another person
there is nothing else there, only help, this is rapprochement

one helps the other, this is rapprochement
there is no other option
then there comes, ^{as it were,} an element of rejection

i.e. the opportunity to help
due to the activity of his own practice
this is what the position of precision is expressed
in the structure of your personal action

Well the person who lives there creatively helps there
he's ^{actually} quite calm
there is nothing to worry about there
he knows that there is no harm there, ^{for example} I didn't bring it there personally
that's why he's confident and that's it

what is he particularly worried about?
he is confident in some postulates of personal development
largely because he himself did not violate anything there
I haven't done anything that problematic

why is this commandment exactly
It is precisely the creative development that is the initial
from the origins of civilization

this is the level of rapprochement and co-development in society

this is ^{actually} not that often, maybe
simple ^{or something} concepts
they are natural but you still need to be able to identify them there

and ^{for example,} there Eternal Development is generally a structure

which in many ways has a certain property of novelty ^{yes}
and it needs to be transformed there
into the structure ^{or something} publicly available concept

and in principle it is not difficult to transform
show this
what is possible due to Consciousness, ^{for example there} affect the body
to improve something there

It is already clear that it is possible to develop forever
if you do this there ^{well For example there} several times a day

i.e. literally simple concepts can be explained
^{Well} literally there in a few phrases or in one phrase

and the question is only in the transmission of information

let 's say preventive
^{Well} warning information transmission system
this is one of the fairly general at the level of the basic postulates
Eternal precise development

ability to present information
to the right point at the right speed
to get practically
^{Well} implementation or ^{so to say} namely the Norm of Development

then the question is
what should it look like ^{yes} this information
This is precisely where the task of strategic forecasting lies

i.e. ^{for example there} ^{well is there} some kind of comet or pseudo-comet there?
just information about a possible macrobody
we need to create some kind of device that would stop it
let it be created on the basis of optics

then it turns out we can say
that optical systems work
we have to do something to prove that they work
then when society believes we must implement, etc., etc.

and eventually build
or maybe ^{in many years ahead}
^{for example, there} through a hundred ^{yes} we are definitely ready now
this body won't even fly

Well we can notice that it flew past there, let's assume
they sent the installation but it didn't hit Earth

i.e. we are beginning to be convinced of the structure of analytics there
but we need to make sure now

so it turns out that we have to build management
their own events
where optics work as it will work
there in the Infinite Future

and then it turns out
that it is precisely the internal resource, the internal mechanism
which is basically exactly in the first level of management
and often there is a high professional there

This is exactly what it is based on
it's just a reliance on this basic level of knowledge
about what Eternal Development is
this is the ideological side of confidence

i.e. precision is ideology
the ideology of Eternity is like that
in fact, as absolute precision
from the point of view of the logic of development of Infinite time

Well, because it's logical, it's logical and it's clear
that it is possible to develop forever
only by setting the task yes Eternal development
precisely by applying these technologies
and not technology, let's assume there are improvements there
there health or improvement of life

it turns out that the norm of health
should be on its own
i.e. well as a minimum yes action attribute

at least a person should have the opportunity
always get healthy to the required level
practically healthy or absolutely healthy state

but then this confidence must
again be technologically expressed
he must have technology

this means we come to a system of knowledge

then the next level is already axiomatic
this knowledge of Eternal development is technologically expressed

well, somehow I already get it
somewhere in some such language
in the form of some kind of lectures
Well similar to systematically organized lectures
I start talking about some scientific course
there systematically presenting the axiomatic level

in fact, at a certain level it is
This is a very clear control system.

although I try to give control all the time
depending on that
how people in the room perceive information
how do they understand it there in the future
in the future they will understand

but here the situation is such that anyone can
for example, give your lecture course there
then he will be able to lay everything out systematically
by some simple parameters

then it turns out that everyone will have a standard lecture course
that's why it arises there
standard education system yes For example

and it turns out that the information is transmitted in a standard way
which provides good prognosis
this is a specific one of the elements of the exact Eternal development

and when we start to develop this situation
for example there in the Infinite Future in this way
what do we see in the systemic nature of yes
that's exactly in the systemic future development
any well gradation of the future

i.e. a person there chooses some specialty
after school or when he is still in school, so to speak, secondary school for example

then here you can see that the design is of the future
it is a very mobile quantity at the moment of action

here's if you look closely
how does he choose yes man

structure of future development

then it is very clear that it is precisely the ability to analyze
a huge amount of information
allows you to do it there as accurately as possible ^{yes}
for a person a choice

i.e. it is constantly improving
and actually looks at his future

a person never has a break with the future
precisely with the Infinitely distant future

where did the theories of reincarnation come from ? or practices etc.
i.e. precisely an element of future development
there namely the Infinite Future
This is a system of maximum concentration and work

and when a person receives from the elements of the future
practically ^{well full example} there is health
i.e. the complete system of action
how ^{so} some kind of optical luminescence system

in which we have, ^{well, practically} speaking, so to speak
a full signal about that
how should it function
there is a human body in a specific situation
I mean in an informative sense of course

i.e. what information is provided there
Health standard
and there The norm of precisely Infinite development
how should this information be received
and if it exists, how to determine it
how is it ^{even} somewhere there to implement to refocus

then the following postulate of the Eternal
and exactly the most important thing here
"accuracy" in the concept is a very important value
it is the ability to manage known information
which exists in the structure of your future development

when do you start seeing this information
as information ^{well in fact,} there is no Infinite Action there
then it turns out
which you can see quite clearly here

that's the level of management there
that any Infinite action is expressed in that
what information that comes to you

it practically captures ^{soot}
the system of a particular person
and you see a certain question of this person
you can see
to you personally

i.e. how it happens with God
people come there
It gives ^{for example} one answer can give Infinite property
and in the future he can, ^{for example,} continue to work there
or give some other knowledge there

and this answer is for everyone and it is universal
^{For example} there is an answer about Eternal development

whoever heard it starts taking technologies
Live forever

the same thing when you see the action from yourself
and he simply recognized the concept of "heard" in everything
that such a concept as such even exists
^{For example} there is "Eternal Life"
that this is a concept that has a right to exist

the concept of "hearing" is not just physically hearing it
and to recognize the right, ^{well} the existence of this phenomenon ^{yes}
Eternal life
also recognize any other right
more ^{like} a legal aspect
seems to be heard in context

in fact, it is simply an acknowledgement of legitimacy
freedom of action freedom of choice
a person can be free
he has the right to choose eternal life

and when based on the structure
Well, it turns out to be legal, ^{yes} constitutional ^{in fact}
within the framework of society
choice

here is a question that comes to you
you see that this is how God works

you must and are obliged to react to it somehow ^{yes}
to answer ^{means}

i.e. the ability to answer questions in terms of assistance
even if the questions are one-off
the ability to find those one-off answers

which have a universal meaning universal context

in terms of mutual assistance
and therefore precise sustainable development
there is the whole civilization
this is often the main aspect of the action
namely the Soul of man
when exactly the Soul is already acting, ^{for example}

finding one who needs help
or it means finding what corresponds to development

for ^{example}, here in general it is very thin
such a delicate question
from God's point of view God's actions

for example , there God decided to introduce such a concept as "help" ^{yes}
this is how to introduce such a concept to God
For example for myself

How does it turn out that he should then create
some element
where He has some kind of approach to Himself
and this means that another person can ask him something

thus God provides help to him
but He does not share with that, ^{for example}
that He helps Himself and everyone else there, etc.

and that's when you start helping, ^{for example} to another
then it is still universal assistance
the ability to find precisely the universal aspect
in your personal assistance
to a specific person

this is exactly what allows it
practically develop a concept ^{well} such management
what is your single action
just as God did
it has a universal Infinite character

and then you see that Eternity is quite achievable
simply even by the action of your Soul
where it is already clearly laid out
in the form of specific actions of mechanisms, etc.

just let the Soul look at this World
and Eternity is ensured for the whole World
and therefore, it naturally comes from you

i.e. it turns out that here
the first signal you acquire
from the whole world he is Eternal

but you did give the signal
this is a reflection of your Soul

so you can look at the structure of the Soul
how does the signal from your Soul go
and what will you have here then
in terms of there Eternal development there Eternity of action

i.e. then we get the processes of Eternity
For example there are resurrection processes there yes
the same processes are simply elements of Eternal development
it just turns out that way
how the Soul reacts to the World and what it knows

this is the knowledge of the Soul simply for everything
not because she's there
brought in these concepts of Eternal Development
somehow them for example there let's assume they synthesized it artificially
achieved results because, for example, we will say so
Well they really wanted something there and did it

there are more fundamental aspects of this World
something that already exists
it's already in the Soul

just as God created the World and for Him He already exists
He is in this world

and what is the difference then between God and man
Here
at a certain level a person is in the same conditions

there is a man and there is the World

means the initial position of man and the World
it is no different from the position
there is God and the World that He created God

God in this world means He can also find his way there
He can, for example, there search as a person yes For example
but it's just clear to Him
He has a concept of "searching" that is somewhat similar
it turns out to be something peculiar
clearly defined in management

it's just a prognosticator

i.e. it's just that when a person
this starts to do what he does well almost the same
interacts with the whole world
it is in the Infinite aspect of actions

and it turns out that the element of precision
is an element of connection after all
Actions of God
and human actions
precisely in the Infinite development

where is an infinite quantity
gives a concrete real mechanism
what to do now
what needs to be done now there in a few microseconds
for example if we are there there are milliseconds

or we start to change
the concept of "micro" to some other value
i.e. we will introduce not "micro" not "milli" but in general
we'll omit some intermediate letter, for example
we will get some indefinite time
but very close

and therefore based on this time
we must instantly create the entire Infinite Future
here is the absence of time that creates everything Infinite future
that's why there is no time for God
in Infinite Development

and this is already a specific mechanism
this is already a specific technology
here take a millisecond impulse there yes
there is a microsecond

difference in speed

if you take something between them but do not define it

time seems to stop yes

the structure of development begins to be like this

what is possible at this time

Well, you can spend any amount of time watching any event

and you can clearly see what to do next

as if just like in the viewing version even

i.e. without considering external connections there

and the event is simply in a static state

every action can be analyzed

any future process

only if you want to if you need it at all

because as i said

at the Soul at the action of the Soul

there is a very clear mechanism for the concept of "accuracy"

and the concept of "choosing a solution"

this is the path that the Soul takes

there is a human physical body

or the Spirit of Man

the personality of the person himself

chooses based on its own tasks, tasks of society

and the task is not always

there is some kind of constant improvement there

when we assume problems from the point of view of personality

here no yes in some action

the personality admits that it is possible there

some negative situation

Well for example, if there is time, he will do it later

he has basic tasks

he needs something there, for example the nuclear power plant didn't explode there,
etc., etc.

Well a person is engaged in some specific task

but people are often not interested in the external background

and when we start to see the governance structure

that it is necessary to deal with the external level of information there

so that everything is balanced and harmonious

then we already move on to that management structure

when we see that the Laws of Eternity

apply to everyone

i.e. it can't be i.e. it shouldn't be
some kind of negative
for the Ever-evolving person
information

i.e. in Eternity everything should be favorable for him
at least after some time, even if it's a long time
it should already work as standard
in the structure of Eternal development

and this process of, let's say, standardization of some kind, yes
in management
these are precisely the social foundations of society
which form precisely this process of systemicity

You can watch it here now
on how society functions

for example in the modern world
as for the system
which must be oriented towards Eternity

that's how it was all built in the first place
on the structure of Eternal development
here we need to find the initial level
in any action

then it turns out that the structure of precise development
expressed action in a systemic, as it were, public
in such a socialized action
in systemic social action

i.e. the ability of a person to recognize and apply
your social status at least periodically

i.e. not that we suppose to constantly think
that he lives in society

Well for example, it doesn't do anything bad there
but it is not necessary to somehow record or analyze something
he just lives his life there, yeah in society
teaches someone, for example

when he lives creatively
he doesn't care one way or another
teaches others to live creatively

that's why creative systems
they possess
mandatory transferability of knowledge
it's just his personal example that allows him to do this
even if he is there himself, for example not active there yes
Human

but when the need for a reaction
on the possible
For example there global problem of civilization there
some kind of probabilistic element of the macro problem there
First of all, let's assume there there is a nuclear explosion
begins to affect the control system

then the next element of precision in behavior
is simply an adequate response
i.e. the ability to predict
ability to do so
so that well at least this macro explosion for a start
which can be reproduced by people themselves
so that it doesn't exist

i.e. this is the conclusion there, let's assume, of the same nuclear weapons
all these movements of pacifists, movements of fighters for peace, etc.

although there is a concept there that is precisely "fight for Peace"
always causes the same certain well as if an internal level
some kind of so to speak in comparative analytics
situational plan

because it is better to spread peace simply
than to fight for it with external systems
exactly the World well normal yes normal norm of life means

so it turns out that here there is a kind of concept of "struggle"
maybe it also has a conditional form yes
that there is some action there
there are those who fight against the World there, etc.

and if we understand the concept of "some conflict"
some kind of "struggle of interests"
we begin to bring out the concept of "systemicity"
what is happening at this point
what is God even thinking about here

how He views

let's assume a system of external knowledge there
as he ^{supposes} he considers
this situation there as a whole for Myself
what is he doing

after all, God is constantly improving something, it turns out
from a human point of view

How can He improve in general?
how is he there, is he in a hurry there
so that there is something next
nothing more problematic happened

then it is clear that His Actions are, by the way, in this aspect
may not differ at all from a person
in terms of actions again not only
but also in terms of reaction in terms of behavior

i.e. it means that the person is absolutely certain
Well becomes clear to God ^{yes}
It gives the knowledge that, ^{for example,} a person needs
but which a person often simply has

He just shows them.
like ^{that} person I was talking about

there is a principle of non-interference
He just does something Himself.
and this is often enough

i.e. the next level of transfer of knowledge and actions
This is an accounting of factors that are often not announced.
i.e. they exist ^{as if} in some kind of silence
Well there is some silence there
when they do not manifest themselves in any way but they exist

the ability to hear these facts
the ability to listen and recognize there
these systems of action
very important

because many ^{well} some stormy facts
there the problems seem to originate
from the earlier level
but which was not defined initially ^{yes}
^{as if} he were outside the control system

therefore the control system is the coverage of those systems
which, for example, are not visualized at all

and the ability to find behind any stormy action
some initial standard system action
which led
some first message yes

why is there some problem there
and there some kind of well at least not that
that there might even be a problem
and you need to somehow resolve the situation, for example
this is how you have to deal with her
so that everyone will receive Eternal Life again

because in the plan of Eternal development
again as I said
there is no concept of "bad" there
just people there or just good ones

there is a concept of "technologists"
which are again there, definitely Eternally developing
therefore, with the exact Eternal development
there is just Macro-creation going on there
and that's all

but from a logical point of view this is naturally good
and from the point of view of some general conceptual systems

This is called, for example, by the word "good", etc.

i.e. based on the control system
here it is important that means already
so that the entire management model
It is precisely in accurate forecasting

knowing the fundamental root
which you can see absolutely clearly
there yourself other people in the future
see what will happen
influence these processes

after all, this is a completely practical mechanism
the one I'm talking about now
where is there my personal practice
there are thousands of students, etc. yes
there is my personal viewing level

this is the ability to influence
by taking into account very detailed events
which are not even visualized
as if they are not even heard
at the management level
this is still such a well it is largely situational
but it is a rather important axiom
which needs to be applied but periodically

i.e. it is not always necessary to take that into account
which is not visualized at all
but at least sometimes with deep analysis
some systemic situation or complex
This analysis must be done

i.e. listen to that, try to consider that
what's going on around you
and where it would seem there is no information
where there are no informational sounds
there is no information noise there

develop the concept of "Perception of information"
not only there on sound visualization
but also for example there [...] fine hearing let's assume

however, this is not some specific rumor
and the concept of simply "event diagnostics"
due to the sound volume

i.e. you may not hear anything

but to perceive by sight
but it is this diagnostic system that we need to switch to
i.e. due to color forms there, etc.

and when you start to develop
mechanism well generally applied
then you just go into the normal Norm
ordinary there human perception

where there is no need to do anything special technologically
where there is simply knowledge of the basics of the World
guarantees in your usual practice
where you generally don't have to constantly use technology

just live a normal life

there healthy Eternal there happy life

and it will add up
it is the Eternal development around you
and for other people

this is exactly the main task of management
in predictive accuracy
skill in the usual as I always said
in no case should trance systems be introduced there

and everything should be done at the level
ordinary calm perception

and for this you just need to know
namely the fundamental principles of predictive management
about which to a certain extent
Now I have told in some aspects

This is where I end today's seminar.

Thank you very much for your attention
