

GRIGORY GRABOVOY
The Teaching about God
Self-recreation in management
26.07.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Self-recreation in management

in this topic where I show
it is precisely the element of self-recreation
First of all, we need to pay attention to that
well , just like God does
In every Action, he recreates himself, including

then here you need to divide the structure of the topic into two parts

i.e. the primary part is sound information, for example Yes
or the theme of the action so to speak

and the second part what really happens
in the management structure at the level of Macro-connections

so if we divide
the word suppose self-recreation into two parts
but it is uncertain to divide it
not in one place in some place
not after any specific letter
conditionally assigning a separation sound there

then we get, for example, in a single control word
immediately an element of simultaneous action
as action by word
and the action by division
there is a sound form
verbal form

i.e. we introduce macro-action into management
as an external action
as some kind of external action yes

for example there is a linear word spoken
there is something said there through some section

sound accent, etc.

and we get some kind of addition of an external value
this is an element
as if the next and simultaneous action

i.e. it turns out that
to organize some element in management
precisely external
where, well, like some kind of training system , let's say
an element of self-recreation occurs

it is necessary to create
the external point of Perception so to speak Yes

and therefore for God the element of self-recreation
this is an element of Perception of one's own Actions
due to, well, an internal message, perhaps
question or information

the same thing is basically identical for a person
he is a person who perceives
as if external Reality in this way
that he still asks himself a question first
for example, in terms of external information
and gets an answer

i.e. he still sends a message from himself, yes
those. the point is known
from the point of view of the sending point

so when we talk
about the element of self-recreation
First of all, you need to determine the location point
in fact, the area where self-recreation occurs

and from the point of view of the elements of immortality
It is quite important that
what for a person
in the technology of immortality, for example
implemented the action
he must go through some kind of training
a system of possible, let's say, problems associated
with the concept of "limitation of information" yes in this World

i.e. it turns out that the task of non-dying
is being decided
it is precisely the task of some training apparatus
which is so flexible
that any information is no longer a problem

for some person for example Yes
any external information

then it turns out
that a person should be able to recreate himself
at any point of control in fact

and then the question arises
how does this technology of self-recreation happen?
self-organization including self -government
in the management structure of any task in general

because the task of management is always preserved
and at the same time we still need to be able to
self-recreation system
to implement
as a system of universality of our actions

i.e. in this case we already guarantee that
that no information can change
Well as if prolonging the action of control

because in management itself it often matters
duration of action
well some concentration
on some specific situations there tasks goals

and that's why it turns out you
to maintain the management objective
a person sometimes has to be in conditions
when he works more at speed
by management objective
but less concerned with external attributes, yes
control over your information, etc.

that's why it turns out
what is the easiest way to control and achieve the goal
it is to be able to recreate itself at the point of control
or there to the control point

so basically here is the task
she's pretty well flexible in terms of understanding
the task itself
what is needed on the one hand
the flexibility itself is due to the fact that
what is needed to achieve the management goal

and on the other hand as a technology of Eternal development

as a technology it is generally quite specific
such as the technology of immortality
it's very convenient from the point of view of that
that when a person is trained in this
in this area of management
that's for him
control over the external information area
becomes may no longer always be an essential element

because when he starts to control
element of self-recreation
then all external information becomes neutral
well from the point of view of negative aspects
possible impacts on humans

that's why it turns out
that in the process of self-organization, so to speak, self-recreation
It is important to track
namely the concept of the task of achieving the goal
first of all, after all

i.e. sometimes by ninety percent
or there can be up to a hundred if it is Macrosalvation
the task of fulfilling the goal of Macrosalvation
she is the main one

i.e. the ability to perceive the system
here is this information
which is called Macro-rescue and Macro-regulation
or there the structure of Eternal development
in the structure of self-recreation
is often a key element in management

so it turns out that it is important to determine here
all attributes of personality
which exist at the moment of self-recreation

i.e. the process of self-recreation itself is regulated by
that a person is in a certain position ^{yes}
in certain circumstances

or he is in a completely calm situation
there from the point of view of health management

but the element of self-recreation
as a technological element
he uses it in terms of achievement
this training skill, ^{so to speak}

which allow him in difficult situations
just recreate yourself ^{for example}
and at the same time not control external information
which ^{could} be problematic under other conditions

if it can recreate itself
then in principle he needs some information
as I said in other conditions
which can be a problem
for him it is not dangerous, not a problem
and then he just trains ^{in calm conditions}

this is one statement of the problem

another statement of the problem
when a person actually gets into a situation
^{Well let's say} due to circumstances it can be called that way
that he is forced to use this technology
as sometimes the only possible one
his situation

because he is forced to do management
by task
and the restructuring system is quite high
it must necessarily recreate itself
so as to ^{pass} through ^{some kind of} niche in management
while maintaining the basic control parameters ^{yes}

i.e. the practical situation
^{Well,} this is the Health Standard, so it should be at least
and the integrity of social conditions
i.e. the norm of all peripheral control conditions

so it turns out that under these conditions

he follows one linear path
he simply often doesn't have another option and
Well for example, there is a pilot who is in extreme conditions
and some movement of the plane occurs
when he is forced into this movement
pull out
and control of the plane yes
and solve problems at the same time

i.e. it turns out that there is no choice
he is forced to the element of self-recreation
apply
as the only possible element

as an element that provides
well, the structure of his own life, as it were, turns out yes

and it turns out that the practice here is as follows

that in this case control is taken
when exactly is the only option
as external and internal control at the same time

i.e. the internal attributes of the Soul's needs
they have only one development configuration

how the crystal grows peculiar
i.e. it is directly visible that it is being revealed
the structure of the only option is quite rigid
The soul acquires rigid properties
as the properties of a hard crystal in the structure of the Universe

and it turns out that we have to
perceiving the impulse of the rigid, as it were, plan of the Soul
in information yes let's say so
see how the reflection happens
from the structure of the Soul
some growth of light yes [...] Souls
and this light
it is necessary to prolong it by an effort of will
into the structure of future events

but the structure of future events must be remembered
here the technology is quite simple
and should be completely unambiguous

we keep the structure of future events in memory

i.e. memory exists as an autonomous unit of control
right here

because in the structure of self-recreation
matrix as if control
is the desire and memory of a person about that
that he must, for example, be healthy there to complete the task, etc.

and the management is based on the structure of hard memory

i.e. memory acquires the same properties and functions
what does the human soul wear

i.e. in fact, this is essentially

memory of the Soul but in the future ^{yes}
Well, ^{well} in general, in formal terms

although in fact this is if you follow it
process sequentially
it is the Soul that develops into the future
where it is usually located
when the World was initially created in general

The soul was put first
into the structure of future development
then the peripheral World of the present was created

i.e. the present
it is a more peripheral structure
than the future
in this management plan

i.e. it turns out that the fundamental root of management
is in the future
but in the penetrating ^{essences} or entities ^{yes}
development of information about the Soul
it is clear that the future reveals
as a deeper reason for the current time
i.e. the future is more concentrated in this regard

although logically ^{it's the other way} around
i.e. further information becomes more and more peripheral

but from the point of view of the logic of knowledge
the current situation is considered peripheral on the contrary
from the point of view of both the fundamental processes of the Universe

and if we develop into the structure of the future World
continuously according to God's tasks
and the main number of people
anyway, they will develop like this soon

then it turns out that the concentration is precisely going to God
She concentrates the World
it means the further from development
towards the development of the Divine plan of management
especially the peripheral world *yes*

so it turns out that in this case we
must see
this is Macroglow

i.e. memory
human body
human tasks
must perceive
the task exists as an autonomous system in this case
a person's personality is not separated from their tasks

and then the process of self-recreation is holistic *yes*

i.e. the task often determines
the whole plan of creation of man himself

for example God who created the World
One task was enough for him
which may not have been defined at the beginning
as a holistic task
it was enough to create one person and the next
then the world around was organized

and it turns out that the task has been determined
there, for example, is the Eternity of the development of the Universe

means selecting the next task
this is often the main attribute of self-recreation

i.e. the ability to configure a task

in the structure of certain conditions
for example, there is the presence of a healthy physical body
presence means norms of some conditions
health there
Norm of social events etc.

in this aspect of management
It is very important
keep control all the time
in a certain circle that you need to know in principle
and it is carried out as a circle that is quite formed ^{yes}
these are the tasks of helping some people
which you know or to all the people there

these tasks should be like tasks
which must still be carried out

i.e. in conditions of self-recreation
it's not just about the person himself
and as a rule, self-recreation occurs much faster, ^{yes}
if a person from the point of view of helping other people
does not underestimate the tasks

i.e. although the main concentration is sometimes like this
that he is working on his information
but nevertheless, as soon as there is the slightest opportunity
go to Macro Management

and as a rule, self-creation is Macromanagement
mostly

then it turns out that he must necessarily
keep the task
it is precisely the task of helping other people

and it turns out that when it comes to help, ^{for example}
here is God who does the management there
provides assistance
regulates the Universe

He is in the conditions of self-recreation
has a niche for some kind of calm development, ^{yes}
sustainable management plan or there Self-perception
when His help is accepted

i.e. the next level of self-recreation
is what you track
that you the help that you provided
in fact, you set some kind of management goal
so where do you help people

and this goal is fulfilled

i.e. in conditions of self-recreation it turns out
you should see that from your action
real help received
or at least you took action
and you know that this action hasn't disappeared somewhere there, yes
in information
help will be received from him somewhere
or you will bring to this help

i.e. the ability to bring any impulse to execution
in terms of there Eternity of Eternal development

and it turns out to be precisely the elements of Eternity
we get it after that
how did you provide assistance to someone
we made the management and got another result

i.e. in this technology we get

in general the next link well as if remotely it turns out yes
it is precisely the element of Eternal development

and if you think about it
why is this done?
then you can see that the Soul that determines
for example, the path of a person there we will say in the Truth of the Universe

she is acquiring here in this case
properties of the human physical body

and then it turns out that
after all, in the properties of the body the concept of "help"
or there is the concept of "transfer of some information"
which is useful for life for development
This is essential information

i.e. in this regard the human body is designed like this
at the level of self-recreation

what information is being received
inside as if yes bodies
i.e. further life Infinite life of the body

and yet in the outer part it is the same
i.e. the Soul acquires the properties of a human mind

and then it becomes clear
why are people often there for example there they ask the question
Well where is the connection ? For example
where is the Soul and if you find it

in childhood why is this clearly by the way the opinion is not defined
in children
because they see more reason
precisely as if the all-rational essence of the Soul
that the Soul is the mind as it were
and Perceptions
and actions

and it turns out that here the Soul has
body contours
and has in general even the vibration level of the human body

then it turns out that we
in order for self-recreation to be such
that it would take place at the most optimal time yes let's say

and we only have one option

we can recreate ourselves in any case for sure
i.e. we cannot, for example , make mistakes here, etc.
and there is no room for error here
here in the conditions of management and any more

It turns out that it's only a question of time
i.e. here we need to very clearly exclude
there is a phase of this type
what might happen or maybe it will happen later

right here, that's exactly it
it can only happen once and definitely yes
we are absolutely clear from the management
we exclude some third task

For example there it can't fail
in this management
then we need to formulate it very clearly
and have
as a whole Well as if some absolute postulate

that here you just need to think about it
about external systems
what to react to

i.e. the next level of self-recreation
this is the ability to position the concentration of control in such a way
to determine the level of reaction yes
here at every moment
what to react to

i.e., to put it simply, you need to find it in yourself
external work
not in relation to the level of self-recreation as such yes

but you just need to determine
knowing that self-recreation will still happen
determine the level
what needs to be done for this

this is where the element arises
as if the selection of a phase of collective Consciousness
related to the fact that everything in the collective Consciousness
contains some elements of Reality

and here is the selection of the phase where in the collective Consciousness
it is known for example yes, situations related

with the system for example there of Infinite development
can you work on this platform

but in principle it is possible to simply remember logically
that you just need to look for everything
nearest control systems
and be able to implement these systems

i.e. it doesn't necessarily have anything to do with it
then we'll definitely implement them
it is enough to simply highlight them in the information
and make management for implementation

they can be left untracked
because their implementation will still happen
because self-recreation still happens
it's kind of absolute and clear

and by the way, this is a powerful control mechanism
from the point of view of control speed
control level synchronization
according to external information with the level of self-recreation

then it turns out that due to the analogy of processes
we don't need to track what will happen next with the system yes
for management purposes

it is enough to just enter the impulse
and illuminate these two systems
Well as if in one space of Perception
it turns out that it will be implemented anyway
control

and due to this it is possible to increase the control speed
means a lot
and in principle bring it to a speed there equal to Infinity
or whatever else you can call it
it's whatever
the main thing is that you understand
that you are still ahead of the process

that all external Reality
well, there is some kind of management process there
which can somehow maybe modify yes
the speed of your control

it's clear to you here that you still achieve
this is what is called a strategic level of management

where it is always realized
the system of your Eternal development

i.e. you see what you are implementing
the system of this area
it is such that you must perceive it

i.e. it is completely clear
what exists
area of future systems of your development

you need to clearly see that this is really so
i.e. to be able to at least understand it logically

and then it turns out that you
well, like some kind of intersection levels, right?

or as a certain level of interaction
with a point of absolute certainty
you start to fixate on the future
how the logical system [...] is fixed

this is how the future is fixed
in terms of the logic of your Thinking

well, that is, you are an element of self-recreation
tie it up
on the logic of your thinking

and that's when you've already tied up with the logic of Thinking
it means you carried out self-recreation

i.e. the structure of logical systems in this World
this is a fixation system
obligatory [...] in self-recreation
and achieving this element

for example , this is how God organizes his logic
in the process of His Thinking

if anyone thought about it
how God organizes all the processes of the World
How does he even think logically ?
from the point of view of human Thinking

as many processes as they can logically be understood

so here is the reverse impulse
from the point of view of self-recreation of these processes

including the fact that a person
or for example any other element
which reacts to the element of God's self-recreation
he somehow still understands this process

this is some kind of well or something peripheral
or irrational logic

in the Action of God

but logic itself is not irrational with God
it is completely logical even from a human point of view

so a person can study
natural phenomena in some way

then it turns out that God's logic
there it intersects, *so to speak*, with human logic
in the sense where self-recreation
this is one True element of future development

if a person has learned to recreate himself
he has no problems at all

and if we are already *starting* this process
well, actually bring it to the level of training systems

it turns out that the element of self-recreation
from the point of view there
distribution of information to other systems
it is such that a person can train, *let's say*
or do management
on some elements of Reality
creating an element of their prolonged
there is Eternal development
by self-recreation of these systems

i.e. passing information to them

for example, here is the structure of the Eternity of God
it also consists in the fact *that* in the understanding of a person
that God transmits information of Eternal development
and at the same time, since He conveyed the information
then He is also Eternal and therefore

It simply models and transmits information.
that's why He is Eternal since He has such information *yes*

around God
the level in the collective Consciousness is being scaled up
where does the information exist

if a person starts to think
about the Eternity of the development of the World of Creation
then it turns out he transmits this information
and receives in response as if
the structure of Eternal development but already its personal structure

because here every element is Eternally evolving
he basically has
well, some kind of system of personal knowledge or something
own path of development

if you convey there to all the phenomena of the World
Well as if knowledge
or there are desires for Eternal development

then they will respond in kind
and man already has the road of Eternal development ready

i.e. the element of self-recreation of self-organization
it is formed due to the desire there for Eternal development yes
the whole surrounding world gets it
well, in some approximate sense

and then it turns out
what is the element in this case of self-recreation
at the point or in the area where it intersects, that is
the opinion of God and man on this issue

i.e. God does the same
transmits knowledge of Eternal development
and man

but to pass on knowledge
this is a completely universal action in general
because how it is done is not important
Well, there is some molecule there

God gives some data on Eternal development
average so to speak yes to this molecule

and a person can take and pass on his knowledge
i.e. he is free to do this action

here we come up against a very important fact

which by the way guarantees Eternal development
to a person
that he can simply transmit in a similar way
at the right point
knowledge of Eternal development

and so if he chooses these points
Well **as** if **more** precisely
then he can distribute this technology faster
more people
then he learns it himself faster

here is an element of mastering this technology
is very closely connected with how people do the same thing

because that's how a person does it
whoever does this learns such management
and there the concept of "training" is often conditional
this is already an action

here in the element of self-recreation
we can't experiment
we can only recreate ourselves, for example in action
and that's all

i.e. there is no opportunity to learn there
we should just as if in a simple understanding
learn
there is an opportunity to do yes

the concept of "learn" is often excluded there
in the concept of "training" or something
there is a requirement for action and training

i.e. knowledge is this kind of delta of knowledge
which is a learning factor
she is at a very close level to the action yes

we perceive this structure of knowledge
we perform actions

i.e. in relation to both knowledge and action
we have some external control

and into external management
very tightly sometimes appointed completely

God is present i.e. God's Action

then it turns out to be in a geometric sense or something
very simple element
in the light design of this control

external control which coincides
with the Action of God for Eternal Development
further goes
element of knowledge
element of development
the only thing is that their speed is the same
to the control point

i.e. we take knowledge about what needs to be done
and the action itself
and move to the control point with the same speed

it means that we don't really need the knowledge itself
The main thing for us is to maintain the speed of simultaneity
in action

because a person is basically what we do
this is already considered knowledge but
and is essentially knowledge
and such an effective one at that
which does not require detailed management

the thing is that in self-recreation
very high percentage of control
often brings out the light optics or understanding of the process

and therefore the main thing here is to work with phenomena
which you understand at this moment

if you go into detail and leave
there it is completely there in the decoding of events
This is of course necessary when there is time there

but often a person needs to do this
extremely fast
if he has some complex processes there
connected well there are some people there
Are there any difficulties in management ?
in general in a situation where instant action is required

then it turns out we can't afford it
to study something there, etc.
we just need to do yes

and so it turns out
that these two light-optical systems
reflecting
on the structure of all Reality
here it is very important to see action and knowledge
or is it generally how to carry out an action
all information about the action

when these two areas
begin to reflect in a convex sphere
Well as if for the whole Reality
then you should get a human body

i.e. we came to the conclusion that in optical terms
alignment with the line of God's Action
with the gaze of God yes
generally speaking with the concentrated Action of God

and by the way, in this area this action is immediately located

in the system of self-recreation
this area is immediately visible
those. where is God's line
where is His Mind
Action yes

we just impose control synchronously
or we pass right in this same area
because if God acts
it means we can go there even more

so we are passing through the same area
and we actually get the speed
which if you move it further
but there is God again

i.e. in fact, we are from God's point of view
we are not moving anywhere
We only pass information to Him

i.e. our target is somewhere geometrically here

but in reality we are increasing the speed
on the transmission of information to God
some one piece of information

then it turns out that behind this information yes

it's logical if you think about it
this is exactly the information that means
what are you organizing together with God
your own creation

i.e. it turns out to be very dense
well, it's even kind of creative in some sense
working with God
by self-organization

and when you start to see
that the process has sort of started moving forward for you
you start this self-organization like this
that you got the outline there your control
they defined the personality structure there yes
laid the structure of their own reaction

i.e. it is often necessary here
all elements of one's own reaction
to build as if from scratch

i.e. well, how, for example, is human perception built
a human body there
i.e. all elements at some level

when synchronization with the Action of God began
you can rebuild
i.e. the entire system of one's own organism
the entire system of one's own reaction

for example, define a control task
to build your own structure of Consciousness for the task
means to build
the structure of development of one's own Soul there, for example yes and so on.

and when you start the personality structure
well, actually, like collecting information
then there is already some kind of matrix here

i.e. some kind of internal system
what are you around
on what basis do you assemble your own personality

here again the solution to the problem is presented

if from the point of view of this management
do well what about the next analysis?

for what reason is God Eternal

i.e. why is He there all the time Eternal number of years
yes there is

means because He has a task
which He constantly decides here
Well that's a logical answer

if we abstract ourselves
from the internal motives for studying this phenomenon
Eternity of God

then it turns out that there is a task
Here He created the Universe
He must be Eternal then.

i.e. where will he go ?
it turns out that the Universe exists
there is no point where it exists

theoretically it is possible to turn into some galaxy
because of some neutral substance
but what next?

The world is constantly displacing God
to Himself yes it turns out

and at some point he had to there
once created and that's it
and this World demands that
that He must now be constantly present

and this is how this relationship between management
where does a person begin to understand
the structure of some internal
here is the mechanism of development of one's own organism
leads to what he sees

connection
every microparticle of the body
with all phenomena
and with every local phenomenon of the World

i.e. he begins to understand
that the organic essence of his being
very firmly connected, as it were, with the Macro-phenomena of the World

and then it turns out that his body
then it turns out that it is really absolutely stable
it is connected with every element of the Macrocosm , as it were

and if a person has some kind of problem
then it still doesn't reach
all elements of his internal reaction

Well for example, there is some complex problem there
in a person
but then the problem is a series of some specific situations

and a person perceives the World differently
he can just take it and switch his attention
then all aspects that are directed
Well there against him for example Yes
they lose their power practically

i.e. the only switch of attention
and the person is already there
in the phase of safe development it turns out

because he perceives
some kind of Macrosystem
his Soul organically translates the system
in yourself
i.e. this action generally resembles some kind of
at the level of sensory sensations, perhaps?
element

that there is some information
stuck to the structure of the external world
he slowly peels her off and collects himself

i.e. takes this information as if drawing it in
by means of detachment

and there are elements that can be heard in the sound
here on the hidden sound
as elements that are characteristic
if there is something sticky stuck there
to some element
then there is some kind of detachment going on
some clicks there reminiscent of rubber coming off

i.e. here we need to take into account that in the structure
why is it so audible
because we have distribution there
information and phases of human Consciousness
as a system that closely intersects with the entire World

here's how to realize
a global system of external information, so to speak

you can just take and stick the element of Consciousness
and he will be there for some time

otherwise where to put it yes
then we need to look for a space for external observation

the easiest option
take and stick as if in a mechanical sense

so then it turns out like some kind of film
this element of Consciousness exists
and receives this information
well, it kind of gets saturated

then it's enough to peel it off
and it's like he 's here yes

so here in the system of self-recreation
can be used often
techniques are absolutely fine like , so simple
or there are extremely simple ones
that would help a person to self-organize
in the structure of any information

why do I simplify to the level of some elements there
stuck for example unstuck yes

and because in the elements of self-recreation
often have to build

the structure of human personality
from [...]
from any impulse of the Universe at all

i.e. if a person perceived
at least some impulse
he can build his personality right away

and if
so that he could build the primary element
he must work
with the simplest control values then

and to gain control from the action
so you can use the sticky element

not necessarily just sticking
it is enough to perceive
at least some light level

some level of predictive development, for example
some level of tasks
and build a personality on any element of action

then it turns out
which is the same as what God does
It is on any element
why God is everywhere in Action

because of the element of self-recreation
He must build himself in the compartment as if he knew
that some action is happening
i.e. in some action

and doing doing for example similarly
it is quite possible to make control
put an element of development
having received at least one impulse of Perception
and you can just remember it
every person remembers at least one impulse

and then you can build
element of self
at any light level
on any kind of logical understanding of the World

Well for example for people who do not perceive
in some optical expressions
enough memory of some process
in the form of words ^{there}
in the form of ^{some} kind of action
memories
^{there} in the form of self-awareness ^{there}

and on any element that captures
structure of one's own personality
can it be grown

and then it turns out that we have
^{Well}, after some such trainings
which is better for a person to do
independently if possible
up to some problematic situations ^{yes}
he could have had

because often in the world happen
some actions
which are needed according to a certain training system

how to get through

i.e. a person must master some system of knowledge
It's easier when he masters, ^{for example} , self-recreation
due to the fact that he sets himself a task and carries it out
from time to time

maybe we can do this
once a month ^{there} or once a day when he wants it
but he must learn to recreate himself
then a lot of problems will not be realized
in front of him

after all, in the conditions of self-recreation
a person must practically
^{well} to the level ^{well} as if practical health
implement some actions
this means it is naturally considered that

^{well} , and in general, at the very least, a person should be able to
overcome some situations
so that he doesn't have any diseases, ^{for example} Yes

then he must solve situations like this

so that in the conditions of the existing systems
as if external or internal control
it must develop optimally and harmoniously

well, that is, all phases of normal harmonious development
but on condition that man recreates himself

and then it turns out
as soon as he works out this system well enough actively
well, maybe in the form of training
or some kind of school education
maybe even some long period
there for several months
or for example there is a year-long course on self-recreation
for beginners for example Well, that's what I'm saying conditionally

if we denote this control in this way
then it turns out that somewhere in a year
he must be able to recreate himself
such a person

and then he has a lot of problems
which would lead to a complicated situation
his life's journey
they will disappear

because then he overcomes
simply because he can do it

he has knowledge of self-recreation
but in fact it is self-recreation
this is an element of self-construction of the person himself
at any point in Reality
Well, where there is, for example, air and water, there are conditions for living

if not then he should build them then it turns out

and then come there by self-recreation
when the external environment is ready
by managing the external environment

and based on this
if we start doing management this way
that we take into account these elements
Well as if what about external processes yes

We all learned there, for example
recreate itself in management
that's when it comes down to it
external element well as if chaotic influence
or the chaotic level of the external World
where controls are undefined eg

here, pay attention to what is in the self-recreation system
move to undefined elements
only after that is necessary
when will you at least think about it logically
Well as if the essence of self-recreation
what is this for

and so that a person can live there forever
he should be able to do the simplest option by the way
be able to recreate yourself yes as a problem no yes
in a person

then he should consider, for example,
element of stability
for example, he can study there for a year
having mastered some system

and if he doesn't have the opportunity to study for a year
he must do it now at once
there at that moment to take and recreate itself, for example

as just there
well, some kind of information transfer
for other people yes

in management it creates itself
this should not affect in any way
some problems
so that they are not carried out near him there
near his physical body

in this case we are talking of course
oh well in general training systems
which concern well how could there be more form
sound form of action
forms of human reaction

i.e. when a person well as if it starts to show

what is in the elements of self-recreation
there are very specific simple actions
which are characteristic of those
what did he do there on the information
self-recreation yes

but he has nothing new there
different from the average person
should not acquire
he should just be an ordinary person
which has
ordinary human functions there
in management there
the physical body is the same as that of all people, so to speak, etc.

It's another matter when all the people there learn
to recreate oneself in this way
that they may be future
this is quite a process, it can be quite fast
for example for the evolution of humanity
that some special functions are acquired there
by type of teleportation, etc.

then that's another question
but again you need to monitor
when will everyone be able to do this yes
do

and in this case we are talking about that
what self-recreation
in conditions when a person does this on information

he retains all the functions of an ordinary person
he is no different
and yet he does nothing like that
to, well , check this function , etc.

in this case it is precisely the lack of verification
training systems need to be developed so much
in management
to understand that training is needed
so that the functions of self-recreation can still take place
it's one of the management functions anyway

We believe that in management all functions are equal

it's just convenient
from the point of view of human health, for example Yes
from the point of view of overcoming some extreme situations
so that the person there doesn't get sick, etc.

i.e. it turns out that as a functional system
she is very useful but she is like that
that's what it was implemented for
so that a person does not get into extreme situations

i.e. it shouldn't actually mean
to approach an extreme situation in some way

the more he
this function is consciously implemented
the less he should approach
to some extreme situation

and based on this we get that
that the faster a person starts
to engage in this practice
that means he has it
there should be less problems actually

and if you consider
The world as a flexible system
there reminiscent of , well, again, this rubber expander
let's say Macro understanding
or there in a conditional sense

then it turns out that here
this is the part that relates to the outer world
she also starts to get in touch
and receive a certain universal phase of self-development

i.e. a person's experience is passed on to everyone
to all external elements of the World yes as if
that part of the World that relates to man

and it turns out that in each subsequent part
already finds a more backup system for itself
with such development

and then he gets a well in general, the simplest question
how to use this knowledge

the easiest option

Well, for example, a person there received a lot of knowledge
what should he do with them

the easiest option

It's faster to share this knowledge with other people, yes it works
even if they are very developed these people

but if he has the opportunity
he can pass on knowledge to them
then it turns out he is there all the time
in the equilibrium phase of a certain

this is how God maintains His normal status there
for example, there is a person there
in the conditions of there management of Macroreality

and because He tries to gain knowledge almost instantly
transfer to all development systems
that is why elements of development arise in the World

that super fast knowledge transfer
it turns out that it organizes the element of the World
for example there is physical Reality

those. overconcentration of knowledge
in front of the object of Reality
creates the object itself

so it turns out that near each object of Reality
there is some kind of impulse
which come from God
and it is located somewhere, well maybe a little further away
in geometric terms, perhaps ?
from the object of Reality

this means that there is naturally a level near a person

which characterizes the action of the person himself

how does God know everything about people

but He just sets the controls at super speed
and this is always realized

that's from the point of view of that

so that there are no negative processes
a person only has to follow
this is the presence of this external impulse that is obtained
impulse of external Reality

i.e. in the elements of self-recreation
there is an element laid down by God
that man still exists in the system of future development

because God gives the impulse where the information is determined
about him
and this information is of a universal nature

i.e. it turns out that God initially lays down for man
element of its future development
this means this element is always there

it turns out that from the point of view of self-recreation
if we start to analyze
human development system

then a person has much larger ones
levels of reserve or something
that it always exists rather than there with him
some final elements of development arise

if we follow God's logic
then this is what happens to a person
there are problems connected with some systems
where is the understatement
this parameter and Eternal development
this is a very difficult situation in the organization

i.e. in this case you still need to be able to distort it
system of collective Consciousness
to consider a person independently
outside the future impulse system

and when we start to look at this system
where does the distortion occur yes let's put it this way

it turns out that it's already starting here
analytics in management

so in the system of self-recreation
when we see
guaranteeing the impulse of human development into the future

which guarantees mandatory development
so for each specific person
there personally for the one who is engaged in management

only then does the analytics begin
from the point of view of the action of external forces

so it turns out that we are the first to carry out control
in the first ^{plan}, in the first level
or the first wave of control
this is only what a person does on his own

just like God does
God exercises control
He makes some kind of impulse
which comes from Him

and He does not consult with anyone
He is the one who originally created the World
He had the original Action.
which could not connect with anyone in any way

i.e. the primary Action of God is like this
that the external world did not exist yet

and a person should do the same ^{thing}
in the system of self-recreation
he must do it first
bringing its management system to stability
for example, finding the parameter I mentioned

that the Action of God
is ahead
current Reality of man
and it always exists this Action

then God always
Well as if I had planned it from the start ^{or something}
and initially laid it down
that man always has an infinite future

and that's when we start to analyze
and what's happening that we have to apply there

self-recreation system ^{for example Yes}
why do we have to solve some problems

by means of some technologies
reactions to the World there
or management

then this is where analytics comes in
but this is already at least the second one
and often even the third level of management

so from God's point of view
everything that distorts this level of Eternal development
it's not really a significant control option
as if counter control

otherwise God would have made it the first parameter, for example
Well, for example, there is protection in management
and then personal Action

but that's why in the analysis that I'm giving now
this can be practically considered in general
from the point of view of that
to prevent problematic human development

It is clear that first of all God gives man the power to act
considering everything else as unimportant

and when we start to analyze
also from the fact that God really was the first to produce
pulse
even logically when the World did not exist yet
He couldn't ask anyone there.
or bypass some interval there
in management

from God's point of view
the action is actually like this
that the action is done
and the action that was before it was done
it's the same thing

i.e. God actually had the opportunity
always make the Action equal
i.e. God always has it in mind
the whole picture of the future situation

here He did the Action of creating the World
and a little earlier there a second or there a million years earlier
in general, it turns out that at that time there was no

Well, for example , if we proceed
from some time parameters

He had it all, yes.
i.e. God has it all the time
structure of future development
in front of Him

and now having entered this control system
i.e. making an impulse from oneself means
and having the whole structure of future development
as a given that exists, well, constantly, yes
i.e. you have a structure for future development

based on this management
well there are already some regulatory aspects of third parties
it often takes so little time now
that the main aspect which is laid down by God
in Eternal development
it is perceived as a fundamental element of development

that's when you come into control
your entire management becomes absolutely stable
this means the element of self-recreation is perfect
taking into account the peripheral reactions there
some external sides here

and then you are completely stable
you can move on
to some next management action

because then there can be normal control
we have accomplished an element of self-recreation
then we switched to the usual target management
and that's all
i.e. you are engaged in the usual management technology

although the element of self-recreation itself is control
but as a rule it is perceived
as an element
that you have created your own information
created themselves, in fact, recreated themselves

and then you do the usual management
and then the power of control generally increases even more

and in principle if you are through external management
pawn some more

via Macro Access
solution to a particular problem again
i.e. the usual control system

then consider that you have entered the normal course
and the usual harmonic harmonic control goes
which in general is not different ^{yes}
from normal background control

i.e. having carried out self-recreation
you are entering the normal control system
and [...] well there you might even be doing this, for example Yes

then you are already logged in
into the general phase of collective Consciousness
and you have no [...] then really no

here in the general phase of collective Consciousness
after self-recreation
This is the basic level of management stability

which allows you to solve it by the way
your internal tasks
tasks of society
there are any tasks at all
at a perfect harmonious level
