

GRIGORY GRABOVOY
The Teaching about God
The joy of control
24.05.2005

The topic of today's seminar
this is my Teaching about God
The joy of control

In this topic I show how
highlight the structure of joy in management
knowing that the structure of joy
this is the implementation of the event

i.e. in fact, you first of all know
what is joy of control in general
from previous factors

therefore it turns out that as such
are you familiar, for example, with the state of joy
and you get any control
is already being carried out under the conditions of that
that this state existed

it's a kind of internal stimulus, as it were
in terms of the level of management happiness there
this is an important criterion
if there is control, for example, complex

and therefore the second element
there is, in principle, a third element further on, etc.
but it is precisely the selection of the second element
that the allocation of a faction is like a joy in management
This is a special technology that allows

Firstly, to successfully carry out management
make management controllable in terms of results
the element of joy as an element of diagnostics of the result

and already the investigative system
for example there is a third level
this is an extension of management
on the structure of the external information area

because the concept of "joy"
it is, after all, a system for transmitting information, etc.

i.e. here you can increase control

further to Infinity
because the structure of joy
can be expanded to Infinity
as if in a single impulse of Perception

i.e. joy as a quantity
it is still an infinite quantity from the beginning
and in connection with this it turns out that we
in fact, if you realize this , for example
as God does yes For example
how He perceives the joy of Action

He is also the Creator of the Infinite Level of Reality
and when approaching this level
as if in a single, well, in human Perception
in the final impulse
He perceives an element of universal joy.

i.e. it turns out that there are
a certain approach technology
to the Infinite level of joy
but you can only get there with the element of joy

i.e. in fact there is an Infinite system
which means joy
and we need to first highlight the local level of joy
how to get closer and activate
this whole Macrosystem

by the way, in the treatment of complex diseases, for example
This element gives a person the opportunity
recover faster even under the condition
what for example primary systems
very burdened, for example , in humans

and in connection with this it turns out that when we work
on the structure of precisely the joy of management
we must, as I said, first of all allocate
that such joy exists
she was if you were in management received yes
or it is possible in the management of a specific process

also an important characteristic
as an opportunity to receive joy

then in principle in unknown processes
for example, you have not met in the situation yes
in any situation in management

it turns out that even under these conditions

complexity of the control system
the possibility of receiving joy
this is a very strong level of control stability
initially

i.e. the criterion of joy firstly holds
your internal position
you don't change the management structure yes
primary control impulse

and knowing that it is generally possible
you can strive for it

i.e. therefore for complex processes
with whom you have not met before, for example
and we definitely need to translate
previous control is not possible for example
then the possibility of the existence of joy
this is a fairly strong level of management as such

therefore, the allocation of the phase of possibility
First of all, this is the stability of management

man highlighting the phase of possibility
in the control interval
always realizes its primary impulse

here is joy, it arises from the initial impulse
for example, the joy of the emergence of life

therefore the previous levels of management
they definitely hold the primary impulse

i.e. your positive idea
which was laid down before the moment of management
it is always realizable and is being realized

i.e. here is a positive management structure
it is impossible to cancel here
under the structure what is the joy of management

this is a very important characteristic
embedded in management
because in complex control systems
you can manage in different ways
you can be mobile
you can change the structure of tactical decisions

but the primary impulse embedded in the control
always saved

i.e. you always put yourself in front of
Well as if you become right you are not wrong
that's the peculiarity

i.e. by changing tactics you always have
it is precisely the structure and joy as a criterion of action
you endure all the time
its linear positive control

i.e. the status of a kind of control inaccuracy
at the same time it is leveled out

and so that a person does not make mistakes, for example
he needs to immediately allocate
structure of the joy of management

and in connection with this it turns out that it works stably
moreover, if at some point, for example,
does not implement the structure
well or he's busy with something
or he for example Well, he doesn't think it needs to be said
all the time what is needed for example through Macrosave
it just works and that's it
or some third elements

then here is the element of joy allocation
or knowledge that there is joy in control
Well for example a simple thought yes there
no matter what happens
the following control still exists

This is also a kind of joyful feeling, yes
It would seem that everything can be quite complicated for a person
but there is the following control really so

i.e. you can gain strength
and take the following control
it ^{kind of} allows a person to reach a state of stability
and it is precisely the joy that the next management will turn out to be

and here we are right now
to the next level
that in the conditions of the technology of Eternal development
a person can have it like that
that situations will turn out differently in life

so it turns out that he should
it means that it is necessary to proceed from the factor of that
what can happen ^{yes for example} it will work
i.e. there is such a possibility that it will work out

and therefore it turns out that from the structure of possibility
we must build a sustainable, absolutely precise management
which is not only possible
but ^{for example} in a tactical version
It is already clear that it is being implemented

i.e. in this case we are talking about
that many people, let's say, are destined to do so
have quite a lot of information
about yourself ^{for example} or about some events

but in principle
if ^{for example} you are doing management
let's say coming from you ^{well} towards the following processes
you are curing some serious disease
and you need to see the structure of sustainability

Well, it is a disease after all
often the loading information itself
for a person who is just starting to practice, ^{for example}

and generally speaking for any person
which works ^{for example}
^{well,} from the point of view of the elements of the sensory plane, or something like that
or he somehow gets there
to the level of sensory perception

and so it turns out that there is
level of just calm work ^{yes}
like a professional

gradually works in a calm system

but nevertheless a sensory level

all the same, sometimes it kind of takes over a person, it happens

and it turns out

what exactly is the structure of the joy of the next action

it is like a level of endurance in management

in this case

and when do we start

for complex diseases there are complex situations

be in status all the time

well, some kind of process of action

i.e. well, for example, there is Saturday and Sunday, as it were

there is a certain level of rest among people

who, for example, do not consider

that you need to constantly manage there, yes

but many of the managers

at first they work continuously

have not yet reached the level of control of forecast phases

this is when the forecast phase is already stable

becomes as if absolute

a person begins to allow himself somewhere

well, somewhere to rest for a while

and generally speaking, when managers begin to see

especially in the structure of Salvation

and I have exactly the same Teaching where through Salvation

Well, everyone understands how the control system works

that's why he's forced to at first

work as if almost continuously often

in a number of well or there are some problems

some may be and not always complex diseases

another person

but it happens that a responsible person

it also starts working almost continuously

until he gets the result

and it turns out that right here

it is the joy of getting results yes

from this moment
the joy of taking action

i.e. it's not just there, well there seems to be a possibility
a person has exhausted all possible means
for example , they were exhausted by his time
by the time of its action

then at least this remains yes
ability to manage
also with one's own intellect, will, etc.

and here we need to put in the structure of joy
required as an action parameter

i.e. we are now moving on to that
that joy is the trajectory of action in this case

when there is either a lot of work or the work is constant
and there is often a patient around
well, there is some kind of hopelessness in difficult situations

and this situation kind of accumulates
in the system of collective Consciousness

and you take and invest
structure of the next action
this is where joy comes from

i.e. you understand
that at least some further action can be taken

this can be called a different level yes
some positive level
but if you see the level of joy from here
then you are acting intensively correctly
and you have the situation under control
it is still a diagnostic system

i.e. the ability to identify the structure of joy
it is also a structure of correctness of actions

i.e. well there for example, there is an element of Consciousness there, yes
a fragment that means joy
you keep it as if in the control field
and it turns out that you mean behind this element
handle the situation correctly

i.e. you don't need to be there ^{often}
in the structure ^{of} the whole mass of events
you only need to visualize the projective area
and control only this point of joy

then it turns out you are doing the right thing
as soon as she starts to slip away, ^{for example}
somewhere inside something is going wrong ^{yes}
you can exit immediately
into the management structure of the future

i.e. in case of ^{urgent} diagnostics of events
when you have a lot to do
suddenly some case comes up
it is enough to find a point of joy
in relation to the case
and you understand that the matter is under control

then you don't need to waste time ^{on} diagnostics

moreover, you ^{kind of} do the management
almost instantly
add the next step

and then by the way
as a rule generally speaking if you saw it
then the step was successful

here's to say that the step is unsuccessful, ^{for example yes or it is not accurate}
before visualization of the event, generally speaking, it is impossible
before objectification

in management it means he is successful
in management means successful in Reality

and that's when you have some business there
^{well or} you are delaying and you need to
return to it again

here at the first signs
often to get an element of joy
This needs to be managed quite a lot first
i.e. again to the correctness of the action
go out

so it turns out that in the structure of joy it is embedded

that the primary impulse is carried out in any case
even if you change your mind tactically

i.e. you always change something else
and yet you are still trying to achieve the same solution
transforming information or using it as if
some tactical means ^{yes}

you don't ^{mean} you're leaving
for the line of his ^{so-called} primary behavior

Well for example, there are some processes in action there
in the same treatment of the disease
if any methods are known
you can change tactically
completely different systems to use
completely different actions to apply

but at the same time you endure
still primary status
what did you initially put in

and the primary status always prevails

i.e. logical status
i.e. it is always possible to change the course of events

if at some point
the man , well, it would seem to him that he even accepts
Well, it's not quite possible from his point of view
there is a correct level ^{yes}
interaction with information
then from the point of view
primary joy
primary message
primary creativity
what is logically appropriate always prevails

and it turns out that we have
^{in general,} a colossally stable system
at this level
precisely the joys of management, the joys of action
or even generally speaking just the allocation of a fraction of joy
in management

it turns out that it is the fraction that is being allocated

This is, generally speaking, a very acceptable thing from a technological standpoint

In fact

if you even in such action

go to the store or the library

and you need to highlight among there a number of even textbooks

the one that will benefit you the most yes

Then

it's a purely pragmatic approach

highlight on the root on the spine of the book

usually it's the lower structure that is sort of fixed

and the upper dynamic

i.e. to determine the structure of joy one can

what is useful for you in this book yes

so a joy signal is needed

it looks like dynamics turning into statics

well, a reflection of the Reality of the World

at the primary point of the speaker

but in removing static

and it turns out that you see

well, like some kind of column of information

there along the spine from top to bottom and it is fixed there

this can be learned

highlight the structures you need in the book

moreover, highlight pages

which can be viewed immediately

and immediately understand the general structure of the book

and in any system of knowledge

Well For example there in aviation engineering

when I diagnose parts from catalogs

completely new types of aircraft may be

and it turns out that we practically don't have to

for example, consider management like this

that management depends on the amount of knowledge of some

or your there or there external knowledge

there can be any catalogs or schemes

not necessarily airplanes, there are various ships, etc.

ships including

then it turns out that if there are a lot of details there
especially if there is a big ship there yes

it turns out that how to select a segment
which is generally problematic
with a million details there for example

so then it turns out that it is enough to select
fragment of finding the most problematic part
from well how to experience joy from action yes

here you can experience it in different ways
from well managers often use the technique
even purely pragmatic
that this time has been worked out
if the defect is not serious, for example
Well, he wasn't a security threat.

then at least the work has been done
and there is further time for work
this is an element of action, well, is it normal or something?
which, generally speaking, is quite clear to people
there is some amount of work
he did it and immediately gets the result

so we need to consider
where this element is implemented
in information
Well, there are a lot of technical systems there, for example .

it doesn't have to be buildings

there may be diagnostics of the region, etc.

and having isolated from here the fraction of joy

the return route is very strong
Well like on this one
at a very strong level, or something stabilized
you can "unscrew" the information to the level
where do you diagnose what do you find

i.e. the criterion of joy as a marker of the success of an action

and it turns out that when you do this
then there is only one point
finding

and this is a very clear and pleasant value in action ^{yes}
it's better to find joy
than dig into some knots or ^{details}
and it turns out that's what I mean
Well, technical systems of course

because in case of action with a person
any system that suits a person
brings joy
so there is such a level of ^{management}

and in the case of technical systems
this is all very specific
here is the reverse impulse
and you start right away, just like in the movies
well, figuratively speaking

in fact it looks even clearer
than any ordinary one there
there's even a holographic video film ^{there}

all connections are visible there instantly
where are you
what should be done at this moment
where the required parts catalog is located, etc.

Well for example, when I was diagnosing an Il-86 there,
more widely there in the implementation of the aircraft
there are quite a lot of new details there
different, ^{for example, from the Il-62, let's say, etc.}

and when ^{did} these catalogs of parts start to arrive?
and there are many of them, there are many volumes

and so they stand, ^{let's say,} on the shelf there
they occupy three shelves there and
and I need to get some diagnostics done there urgently

then and so basically I periodically
This is of course not the only natural method there
diagnostics
but nevertheless I give this as an example
as one of the methods is quite effective
to make diagnostics quickly

this is what is meant

if you need to do it quickly and efficiently

and I just came
and to do this you just need to look a little ahead
i.e. the impulse to search on the book
where is this book where is this page where is this node
and that's all

and then you can just come
take the necessary catalog
find the desired page, the desired line
instruct to write and give an answer
and that's all

and how does it work out here?
that control is exercised
practically because I already looked at it
impulse to carry out an action
but didn't search for example Yes
I just took a different sample of information
and that's all

if I started looking
I would then practically have to
Well, let's look at the whole volume

here it turns out the search consists of
that I considered my future event
and that's all from this event
took the information as if

i.e. I just came to that action
which I have to do
that's all and

and at the same time I through the criterion of fulfillment
the element of joy came out

and the marker is quite stable
here, by the way, the specifics are very precise

there is a specific environment there
a specific selection of halftones, as it were
if we even consider it in terms of color

i.e. it is always visible
what joy comes from anyway

and there is differentiation
by the nature of this impulse, by the structure, etc.

and it turns out that it is actually called joy
because joy is stability

any other situation
there is success there for example logical success
there is some kind of general success there
these are completely different criteria

of course they can work too
but then we need to clearly highlight
these are the systems

and it turns out that he is the closest one
or something to a person in action
in its natural action
and the most generally not tiring element

because there is a lot of management
it is important to choose things
especially when transferring knowledge
that don't tire people out

and here is the structure of the selection and search
this is like a fraction of joy
this is a very effective way

there is control through joy
i.e. control if complex
you first kind of gain control
by the way well as if some kind of activation
or even a set of information of joy
before the management area especially if it is complex and

and here the starting point may even be because
that the task is very difficult and you are happy about it

Well, you can think of many reasons, yes

you can just build them

so you take on the task
as a rule, you do it quickly

i.e. first you accumulate

the structure of joy falls
the whole system of the future task

and that means well let's say inspired by that
why are you pulling such a large volume?
you implement it quickly
because by the way the structure of joy
this is still a diagnostic of the correctness of the action

you immediately put it into action
correct answer
without actually entering into this action

is also an important control element
large amounts of information
and especially those that, for example, you don't need in principle
Well, that's exactly it for the sake of detail

same system there
or it's some kind of ship in diagnostics
or these are some houses there with an arbitrary design
with some complex interconnection systems
or is it any technology there, an airplane
space

in principle
in principle, only fundamentally suitable for this system
and diagnostics is precisely in action with a person
but a person must feel mutual joy

there is a peculiarity here
in diagnosing a person he should see joy
from the fact that he is being cured, for example
or he doesn't have a problematic diagnosis there

i.e. then we need to look at the person's future
and see that he perceives this joy
from its seemingly stable position

only then with this element
you can approach a person
because a person rejoices as if at the same time

i.e. God created universal joy from the Eternity of life
and here the important element is from the future
that here is the implementation of action in joy

this is an Action that initially comes from God
He realized the primary, as it were, joy of fulfillment
He did it and got it

realized received the World

i.e. primary joy
this is precisely the feeling of the primary Divine

if we see how God rejoiced
then our tasks are clear

i.e. God gives control based on that
how He saw His own joy

joy of man
this is the comprehension of the path of God

it turns out that from here we begin to implement
the structure of the development of Eternity

and then it turns out that Eternity
this is an action of joy but as if in our direction

universal joy it is eternal
there are criteria that are Eternal
i.e. life brings joy this is an Eternal affirmation
Well as if to have the structure of Eternity
in even logical understanding

and life is joy yes For example
if you put an equal sign there or a dash there

so it works out
what does it mean if for example you make such a structure
life there is a dash of joy yes
it turns out that there is life there, for example

Well, this formula
it can be completely elementary
but understandable at the level there
or even some kind of universal one
Element of Perception

because from the point of view of logic
if you just take it and go there

into the structure of collective Consciousness
where the dash means minus for example Yes

so it turns out that working with the structure of joy
we always have life
This is even logical

no matter how we interact with joy
we have life

so it turns out that if we use
this structure
to enter the Infinite Value
as I said, you need to take the element of joy
and enter into the Infinite magnitude

it is precisely the structure of Infinite development
that which shines or glows from Eternity
this bright light
there is the white light of this Infinite system

it turns out that sometimes it has a golden hue
people often perceive it differently there

but it is precisely the structure of joy
as a structure of already action
i.e. joy becomes the structure of action

i.e. if there is a lot of joy in the future, yes
then transition into action

for example, in the Infinite Future
people carry out their actions
i.e. they experience joy
any action results from it

i.e. it turns out that the more a person develops
in terms of precisely creative development
and precisely the Infinite
he enters into a greater concentration of joy
namely, universal joy

and this is already the primary impulse
which was given by God

i.e. in Infinity
God receives the primary impulse for Himself

which He initially laid down in the creation of the World

and it turns out that a person

means created at some point

For example as if in the form of maybe that level

which, for example, does not even personify

structures expressed

that's what's special, there's no expression there

For example there in some phase of Perception

there is verbal sound

here comes the transition of systems

when the concept begins yes one there is another

I'm just trying to express a multidimensional system now

what does it look like yes

in words or in Perception

and during the transition

each of the words each of the expressions

without ending it goes into the structure of joy

i.e. there is a glow in the structure of the external environment

and the words mean the next action

those. unformed word

or formed there only in the initial impulses

forms the next action

this is very important in that regard

what did God originally mean

in the structure of the word universal action

i.e. each word at the beginning

meant at first a universal action

i.e. how in general if you think about it

the word worked at first

when the world was just being created

here it began to be created

World

then it turns out that any process is actually

it means he was such that he intersected

and if the word began then

then it turns out that ^{for example} there I need to say
there "in Reality" ^{yes}
there "in the existing Reality" etc.

then I can, ^{for example}, start saying "in Real..."

and then comes the next task
i.e. the world is still developing ^{for example} Yes

i.e. Reality arises
the word turns into Reality
but it's not finished yet
and then it begins
i.e. all words begin with a sound form

and therefore it turns out
that in order to pronounce a word
at the same time, the person was expressed ^{as if} by himself

complete freedom of man in that
that it is expressed in joy
i.e. it turns out that it was created to a certain extent
at a certain level just as freely
in the form of how God is created

how God creates Himself
at this moment
together with the World

level of freedom of a person
this is the level of his inner joy
when a person is happy he is free

and it turns out that based on this
we see the structure of joy
as a structure of self-recreation, too, among other things

from direct observation
how God recreates himself
and direct observation
how the Reality that is still being created is formed

those. in the structure of joy
we can get into intermediate processes

this is very important, what I am talking about , ^{for example}
as a rule about the control system

in this case i am talking
about some kind of intermediate state
which we are not considering
like in a slow motion video there For example
from the beginning of any process

i.e. the process begins to develop
and we watch

it turns out that one word has a transition to any meaning
we start the word
we start some preposition
and the transition to a multi-perspective meaning

this is the action of the word at the initial level
and that means it's closer to God

i.e. God said in the beginning
Beginner level words
and it echoes throughout Reality
and it turns out to be a universal action
from any word of God

means all the words that come to God
mean His Actions
i.e. all words are Actions of God
in this understanding, as if in general

and when we start doing management here
for example, here is one of the positions of my management
this is what if for example you enter
at the social level, technological level , etc.
structure of the death ban

then God did not create death
will be more and more accurate can give knowledge
to people

i.e. He was originally accurate
but He certainly initially naturally gives God
then a person will simply be able to perceive more accurately
when he excludes concepts
For example there are "deaths" from the level of Perception

and really
there is no way not to talk about it for example
and just doing everything so that death does not happen

then it turns out that we
here is based on the structure of the Eternity of development
we are already approaching a very simple value
in general action

you just have to understand
generally speaking, any kind of destruction can be excluded

from the level of collective Consciousness , perhaps
collective management so to speak

although it may be possible to exclude
from the level of simply a local plane of Consciousness
there, for example , some kind of collective, etc. group of people
and this will already be very effective often

then we come to that
what processes
which well as if they are infinite from us or are far away
or Infinitely Deleted
they start to curl up
already based on the joy of control

i.e. we come to joy as if by a management path
these rings, by the way, they wrap
in the likeness there are eights
but the truth is tilted as if the impulse is here
are twisting
and somewhere around clockwise
the figure eight begins to form
in your direction

i.e. there is a specific symbol of joy

and so if we start to manage
i.e. close the figure eight yes
the infinity sign is actually closed
then we see on the circuit of the closure
all control parameters

i.e. the primary point of joy
where is it anyway
Well, it is precisely in the action of success

i.e. we, for example, are in the exact action yes let's say so
we need to mark the action
and we need to perceive the element yes

but if we don't solve the issue yet, well for example completely
some complicated situation , for example at a nuclear power plant
then we need to move
and we want to use the criterion of joy
as an intermediate action
we must abstract joy
and make it just a criterion

i.e. to observe from the outside in a calm state
observe
where does this marker move

because if you perceive joy
you should have already taken action
make sure that an explosion at a nuclear power plant does not occur

and if you move
you have to take it
as an instrument of action

i.e. joy allows for an element of formalization, as it were Yes
in relation to this event
or to the one that is called joy

and in connection with this
this is when you start to formalize
you see that this is when the world turns
into the World that you see
in real for example there is a daily world
which you perceive there when you get up in the morning, for example
and looking out the window or walking along the streets
exactly in the morning

you can see how the element goes on a physical level
At the physical level, a gradation can be distinguished
where God omits the joy of the action of the next yes
and how does the information go, as if the descent of this substance

i.e. it is possible to observe directly on the physical level
where is this layer

connects
with a known level of simply physical space

and when you start to visualize processes
that's clear enough
what can be done creatively by a large region
and moreover, on the Infinitely Developed Region
manage
it is precisely in the Infinite understanding of management

not even once manage then control
and not let anything happen
there is a global problematic Macro event

and then move on to that case
if you increase the number of concentrations of other people
from any region in principle
but also from this ^{one} that you are doing
it can be brought to that point
that even minor catastrophes no longer occur, etc.

ideally and in general it will be like this in any case
the controllability of the entire system will still be there
Realities
that even basic problems won't happen
in people

and then it turns out that
not only by the way for people
other systems also ^{have} development
in animals and so on plants ^{so to speak}

any element of Reality can even be expressed this way
this is already ^{like} a colossal, ^{like} energetic
energized joy
which is expressed by the presence of God
in general action
and in the local

i.e. a person already comprehends
Action of God
in terms of the Infinity of its action

this is already the joy of joint management action
together with God

and when you start not to separate it anymore

i.e. where is the joy
a person ^{there}
God
the joy of joint creativity, precisely together with God

then it turns out that this is Infinite development
already provided not only there personally to you
but also to those people who are watching you

i.e. they comprehend this Truth
and they go together, ^{for example}
or they move in their own way
but the main thing is that they see and understand it

and here it is important to see
that everything is a controlled future
this is generally speaking
enough ^{well in general} it is flexible, but in terms of dynamics we would say ^{yes}
at the level of optics ^{or something} Perception

but at the level of controllability
when a person knows for sure
that something will happen to him
^{Well, he is absolutely sure, yes.}
he is in complete control of everything

he knows what will happen next
in any action

^{For example there are} people ^{there,} many people went sledding as children
before moving out he knows the feeling before
he knows for sure that he will leave exactly like this
and will get exactly this feeling

and when you start to perceive
the future Reality exactly like this
then firstly, controllability is complete at the moment
then you are not leaving anything out

By the way, this is also a powerful diagnostic tool
because if something is wrong
you don't have the same feeling

from the sled's point of view
you choose the route, so there may be another one

so what if let's say you start doing
well, by analogy to that
as God does

He makes any route favorable for Himself .
then you start to overcome

that's the difference after all
in Action for example Yes God
well, that is, between God
in His Perception
For Him, any route can be favorable
at the moment of approaching some problem

a person should, for example, still
Well, it's best to do it in advance [...]

although he may come out to the joy of God
by the way, here it is
to come to the joy of God instantly
due to the occurrence of a favorable event
well, it's a bit of a bump
if a person again the story is that he is riding on a sled

then it turns out that it will pass by favorably
God helped him at this moment

and here here
structure of interaction with God
i.e. instant interaction in terms of overcoming

i.e. he should see it then
and what does God do at this moment?
what does he show him
he must see clearly
this is a pretty specific situation

and this is generally a situation that correlates
often is the structure of Joy
generally speaking, as if the embodiment of joy in action

i.e. all beneficial action is joy

you are in a space of joyful action
when you overcome often difficult problems

and it turns out that when you are given space

form around yourself
this is one of the levels of the physical, so to speak
autonomous precision control

i.e. your system is like some kind of submarine, yes For example
moves in the information space
and you are calm as if in some favorable
there is a sphere of action
stay for a while
it goes as if by some kind of automated move

i.e. as soon as you start
enter this space
you feel the tension of stability
and the movement happens as if by itself

and now if you start to consider
and how does a person develop in general?
that's from the point of view of what a person thinks
that many processes well they kind of happen by themselves, yes
in a person

Well, for most people that's true
i.e. people develop in natural conditions
ordinary as they consider life
and there is no need to constantly monitor the cells there, etc. yes

and here it turns out that if we
from this aspect of natural development
in the structure of joy
we come to the person
we see the interaction between cells

and it is the structure of joy
this is a certain level of conductors

those. in this structure you can
for example, to restore nerve fibers
it is possible to create the structure of the organ
from self-awareness there for example

i.e. it is a pretty good system
and diagnostic
and as a construction
even in the form of a building material

i.e. it is like a multi-angle system

which goes over
from the level of action in information
into physical Reality

transition
from information
into physical Reality
this is the joy of God's Action

this is generally just often
already at the investigative level
or there at a remote level
this is information of joy

and that's when we start
Well how to do control here
or we want to consider it there
where is the transition

Well for example , if we work specifically
with the level that we need to make a transition
from information
into physical Reality
in terms of the physical Reality itself

i.e. it's not that the event turned out favorably there, yes
and in general terms this is the joy of action
where it worked out and was normal

i.e. we do not consider physical processes
but in case, for example, if you need to get health improvement, yes
are you treating someone

if everyone there is healthy
then it turns out there may be some situations
where a person must overcome
for example, there might be some kind of problem there, not to mention a problem
but some information
which may be negative for him

then here is the transition
namely control of the physical system
physical body

this is exactly where the transition is
from the Action of God

into the structure of a person
physical body
elements of joy are clearly present
and it is located almost in the core

in general, you can say the same about the center of the cell
there the molecules are like a nucleus
well, almost like the atomic level and even deeper
i.e. a certain central part

i.e. if we take the cell nucleus there
then it is even deeper in the molecule than the atom for example

and when we start to consider
these are the transition systems
then we see that joy
a fairly secure control system

i.e. it is autonomous firstly
it has instant properties
or there is a gradual transition

and moreover, when approaching a person
in the field of Perception
often if it is possible to adjust your Perception in this way
easy to set up
like some kind of optical system, let's say Yes
some kind of lens as if from the back side

i.e. you see the result here
and your lens is on that side
i.e. you are looking from here
but you perceive it here
look from that side
through some optical system
and you perceive it from here

you do two actions
for the structure of joy
it doesn't cause any stress

because joy allows you to work
in different areas of management
and do it differently
as if in a single impulse of joy

here, pay attention that it is a joy to work

unless we look at some details here
quite a simple level

i.e. for those processes
where a fast level of fixation is required
control is implemented very quickly

in case we work with long processes
then we need to detail and formalize

i.e., as if to distance the structure of joy
work with it simply as with information
without perceiving on a sensory level

or at the level of the Soul, for example, perceiving
as if from the level of external control
and more by controlling the Spirit

here it is also important to be able to transfer control
as if in a formal phase
work with information

or work through the perception of joy
identifying some element of Consciousness
with the structure of joy
i.e. actually rejoicing yes

or you can say there
that such a formulation is allowed
i.e. "as if rejoicing"

but here is the concept of "as if rejoicing"
This is usually not done here
in management

because if "as if"
it turns out that there is no completeness of actions
there is a replacement, which means a conditional action
and the impulse begins to be unstable

i.e. you can either perceive the joy of control
as information in full
i.e. accepting the physical body completely

or then formalize management
and perceive it simply as an element of information

knowing that this is the joy there

the segment is moving
's call it or consider it joy
or we diagnose that it is an element of joy
and let him show the way there yes For example

so it turns out that based on this
we can do quite complex things, for example
by the way, even people there have them
conditions with different problems apparently

one can say for sure
what a manager who works
through the structure of joy
generally speaking, a manager
which is actually involved in management
as a rule he has no time
are some there into unfavorable conditions
there to enter
especially in some depressive times

but if a person is faced with the fact that someone has
Well, he has to take someone out there .
from a depressive state
so that another person would simply work faster

that is very often the easiest option
through Macrosaving it's a lot of work yes
means a lot of joy from the results

but generally speaking, just introduce the structure of joy
as a formal action
and he gradually realizes man
and by the way this is an output element
even from organic diseases

i.e. when a person strives
to the structure of precisely free simply ordinary there
Well joyful so let's say states

and this is where I come back to it again
transition when you look
where control passes to you
then it turns out that you see

as matter begins to grow
around this impulse

i.e. the impulse itself is very clearly divided
well, there's some kind of light grain there
which starts to move

Well as if an element of information there
it looks like it's just a small glow

and it is clearly outlined
silvery e for example, white there has a golden hue
if you look at it a little further

and matter grows around
it is very clear what the matter is
and what mass corresponds to matter
that there is matter in information at all

and the matter of the physical body of a person
here, in general, it is clearly visible
how does this matter begin to develop locally
what does she look like etc.

and in this way it is possible by the way very clearly
Well for example, this is a very powerful tool
in the treatment of tumor diseases

because it is visible
that matter which does not relate to the concept of " tumors "
this matter does not have the status of Infinite development

and the matter is always healthy
How well, like any universe
starts to give information
there are powerful external radiations there

radiation is constantly increasing
and if in some area of the local level of matter
which seems to be in contact with the structure of joy
with an element of joy

it means there is no increase somewhere
it means a tumor-like process

and quite simply on just to replace this glow
i.e. well, stretch the line

from the level of joy to the level of development
and that's all

then in the tumor in this case as a rule there is
transformation in the same place
because there is a way out of the tumor by restructuring
and in this case the tumor is transformed again, and so on.

i.e. this of course does not only concern tumor-like processes
but also any other problem
which occurs in the absence of joy
in the sector of action

i.e. it is a certain level of radiation
which can actually
penetrate
all matter as a kind of glow

well some space
on the basis of which occurs
For example there any action is of a creative type

you can highlight such a bright space
for people who, for example,
exactly in this, well, mostly joyful way
are developing
this is quite a large volume in their action

and then it turns out that by highlighting this system
as a system for example of the following practical action
as a kind of platform or basic information system

very simply, having learned, it means to modify
always perceive this system fully
namely complex perception
makes it possible to control the entire system

you can see it here
that very clearly only by developing waves of joy
can be diagnosed
what is happening in space in general
what happens around you when you are physically

This is one of the control technologies
for your events in the future
for example, there a day ahead for 10 years or 100 years

i.e. it is possible on the platform of joy
as if on some boat and being
stable and absolutely often

but at least the boat will definitely be intact
in the structure of collective Consciousness
this means that the structure of joy is clearly identified
as a sustainable form of governance

people are happy one way or another
and that's why this boat is intact
the main thing for you is to see yourself there
and watch
How do you get on this boat, i.e. at what time?

then it turns out that by analogy with that
for example, how God created space for himself

logically from a human point of view
God naturally had to create
space of joy
i.e. He should live there happily

and it turns out that we have
quite a favorable space
that's exactly where God is yes
well let's say in the information let's say so

for the logical postulate in the Action of God there
it is clear that then He must create
Eternal development for all
then His own position
becomes more specifically defined

He already understands that everything is universal
there is one and Infinite for example Yes
He is the Creator

but at the same time on a human level
for God
namely sustainable Infinite development
this is an expression
It's like a starting or Infinite level
this level of joy is actually

Well like space
and life from the point of view of information

and generally speaking of the universal Infinite Reality

the concept of " Infinity " fits right in there
with the level of God's current life

i.e. in Infinity
He is just as happy
when everyone is in Eternal development

then it turns out that we have
very simple transition space ^{yes}
into the structure of Eternal development

it's just on total
structure of the Eternal Joyful Action
i.e. happy development
where joy is the foundation or platform
for Infinite Development

then it turns out that this is the task
see yourself as being
there, ^{let's say} , at some level of joy
it is the ship of joy and not the boat, ^{yes}
sustainable management there

it means to pass on knowledge to people
i.e. they have the same boats
all together they organize there
some kind of ship ^{and} an increase in resources

and then there is a special formation of joy
as systems of favorable management
i.e. as a certain path that you create for yourself

exactly the way
namely Eternal happy joyful development

then it turns out
joy formed in this way
not by some mechanical ^{or} informative means
not by optical means only
and by means of logic there

gives very stable control
which is already becoming
precisely ^{as if by} forceful control

this is an element of power control
which allows you to solve almost any problem

while holding control of joy

This concludes today's seminar.

Thank you very much for your attention
