

GRIGORY GRABOVOY
The Teaching about God
Mind Control
22.10.2004

Hello

The topic of my seminar today
this is my Teaching about God
Mind Control

In this topic I am considering technology
when a person works for example through Thinking
can work
as through the procedure of Thinking
as well as by light optics reflected from the sphere of Thinking

that's why in this topic
First of all, it is necessary to pay attention to the fact that
that when you work for example through the Thinking procedure
necessary in the very spheres of Thinking
form the management goal

for this it is necessary to create an optical space
which allows for example the purpose of management
to form as if outside the sphere of Thinking

i.e. the task is as follows
what are you looking at on optics, for example, some sphere
and form the management goal outside of it
and then you bring this goal
as if inside this sphere of Thinking

for this you need to make such control
which first of all shows
that your Spirit which is present
and in the optical communications system
and in the structure of Infinite development
it is a specific information carrier

i.e. Spirit as a means of control
and as a certain degree of access

because if we talk about optics, for example control
then we can consider the following process here
what is the control optics itself

which for example is the management of this one process

and there are also, for example, processes around management, yes

here to bring the management
directly into the control segment of Reality
it is necessary to be able to do this at the level of the Spirit
conduct a system well as if in a hidden form

i.e. the speeds are so high
what is your Thinking or there are spheres of Thinking
this is the level that immediately passes
to the management level
and at the same time your Soul
in this case it is manifested in Thinking
as a structure of future events

i.e. you can see the work of your own Soul
through your own thought

this position is quite ambiguous
because when you look at
some future event
you can perceive for example with the Soul
and you can perceive it, for example, at the Spiritual level of knowledge

in this case i'm talking about
that you through the structure of Thinking
see the reaction of your own Soul
i.e. you perceive your own thoughts

in this case the thought
this is your system of perception

and when do you start developing such technology
then here it is clear that all the contents of Thinking
This is also a control system that is immediately located
at the control level of Reality

i.e. if we consider, for example, the micro level of management
i.e. some level of the Microworld yes
or transition to the Macro Control System

then you can learn in this technology
it is enough to see the connections specifically

between the Macro level, i.e. for example the external galaxy
in the optical range of the available zone
some microelements

and how do connections pass?
from Microsystem to Macrosystem

i.e. if we look at the human body
then we can consider
this is precisely the system of understanding the body
from the point of view of the Macro level as well as the Micro level

i.e. in this case we can have
a fairly complete picture
for example the structure of the human body
without identifying any specific ones
there may be distant signs

i.e. we can see specifically
what the body itself is
and at the same time see the meaning
or the fundamental level of its development

when do we start to reach this level of management
then the body itself, i.e., for example, a healthy body
development of the body into Infinity
The Eternal Body is the level that allows
you see your future in the aspect of Thinking again your own

because in order to see the structure of future development
through the aspect of current Thinking
it is necessary to connect the Mind with the body in some way

and here I show how this can be done

when the structure of the physical body
is practically on the same platform
in terms of human development prognosis
that is Thinking itself

here we are in fact summing up in this case
well, some level that is inherent to the human body
this is the level of feelings the level of Perception
to the human mind

i.e. when we begin to consider

such an aspect of Reality for example
how Perception of nature foliage animals stones
any level of Reality at all

and if we want to understand at all
than you for example than we can perceive yes
how we perceive each aspect separately
for example, how we perceive vegetation

like the animal world
or how we perceive the whole Reality in general

i.e. what is the difference in a person in general
in this system of Perception

then we begin to come to that
what we see is actually a person
acting in relation to Reality

i.e. to understand what the difference is in Perception
i.e. where is the governing level of the Soul
moves to the level of, as it were, strategic further management
we must see how the body develops
into the structure of knowledge of this Reality

i.e. the body as if passes into the control structure
through Thinking
and the reverse level, i.e. the reverse wave
this is the information that we perceive

but in this case we are considering
acting body

i.e. to perceive, for example, vegetation
at a distance there are two hundred years ahead
and work with environmental issues yes
Perception must be considered first of all
from the point of view of a light person

if we consider management
in relation to the animal world there are five hundred years ahead
then this is the cardiac level, i.e. the heart impulse, etc.

i.e. you can watch
what level of person

perceives what element of Reality

and that's when we want to understand
what does he perceive in a person as a whole ?
another person
then in Infinite development
a person is perceived as a whole by the whole person

here it turns out there are no differences
at the level of one person and another
in Infinite Development

any system of knowledge is transmitted to the same extent
to what extent does it exist?

and this is the level that is obtained
namely the carrier level and the logical level
level of some logical platform
which is based on
Management system through Thinking

here thought becomes feelings
she begins to feel she begins to react
as a system of practically Infinite development
and at the same time you can see a distant thought
as a thought perceiving that information means
well, which is practically perceived by your physical body

and here you begin to understand
what can be deployed in this way
structure of Thinking
what Perception of distant thought
and the Perception for example that you have
Well as if inside the physical body or near the physical body
it's about the same level of information

i.e. you can take , say, a glass of water with your hand
and understand that he is cold
but it is possible due to Thinking in a remote environment
understand what the temperature of a given environment is

and when we begin to see the structure of the connections
what's happening
how is this information transmitted at all
then we see that the transmitting level of information
this is precisely the level of work of your Soul

but already in Infinite development

i.e. the Soul actually unites
all the phenomena of your personality into the management structure
and allows, well, inside, in general, to be autonomous
human systems
allows for a fairly comparable management system

i.e. if the Soul has a level of control
in Infinite status
and the Eternal Spirit has the power of action ^{yes}
also at the level of the vector, namely the vector of Infinite development
then we can have the same properties of the physical body

so we move on to that
that the physical body has practically identical properties
in certain aspects of development
the same as for ^{example} Soul

and the Soul in her ^{so let's say} exactly in the original state
what God has given to man for knowledge

and when we begin to see these properties
body and soul
then it turns out that the thought itself
in principle it does not present a problem
as a control element

because in this case any control system
it is practically a system that comes from
and from a person
and at the same time is actually under control
actions of God
where God laid down an action originally extended to all

and it turns out that here you have the opportunity to see
that when this action is extended
^{for example in Infinite Development}
you can see that your own body
has the properties of knowledge
structures of Infinite development

for this you need to see
how your Soul develops precisely at the Infinite level
how does your Spirit work

how do you learn any knowledge yes

and when you start to see
that you acquire knowledge quite actively
some levels of management
those. some kind of receptors
then this is exactly the work at the level of Thinking
i.e. you can Think for example yes, straighten it out
sound control structure

i.e. you can through Thinking
make the sound more prolonged
in Human Perception

i.e. you can say the word
and it is possible due to the structure of Thinking
give sound dynamics of development
for example, your own speech, yes

in the Perception of another person

you can make a sound at a great distance from yourself
but at the expense of Thinking

it is possible through Thinking
for example, make the matter control structure accessible
in terms of its knowledge and management in Infinite development

and there is a certain key here which comes down to this
that in order for your Thinking to be clear yes
for another system of some action
and in general for any information object
you must make Thinking identical
for another object too

i.e. when you want to, for example, gain control
Endlessly evolving
you still need to
means to introduce a contact system
for example, spheres or optics of Thinking
from the outside so let's say yes on Wednesday

and here it is very important to identify first of all
where is your Soul this external environment so let's call it
leads actually to your sphere of Thinking

i.e. you need to recognize the path of your own Soul

to think correctly
and the thought was the driving force
i.e. in this case I mean "correctly"
from the point of view of what optics means to control
make the manager for Macrodevelopment and Macrosalvation

i.e. you can think about anything
precisely in the creative aspect
but you get control
which generally speaking always affects the Macrosalvation system

i.e. you can read a book watch TV
or think whatever you want
but at the same time at the level of fact
central control in general
at the level of the main governing positions of the World
you can, for example, save nuclear power plants or diagnose airplanes there
or do some action
it is precisely according to Macrosalvation first of all

in this case i mean
First of all, it's management
where for example well at some distance from the control level
any system of your Thinking is located

and then it turns out that the path of your own Soul
this is still a path through the Macrosalvation system

i.e. the Soul always recognizes very accurately
where there is Macro level action

and when you start tracking
the path of one's own Soul
you start to enter
precisely into the system of internal contact
i.e. your Soul becomes almost like that for you let's put it in plain language
although it is understood as it is commonly believed
but in this case you start
see her actions from the outside
and this is important

because when you see the actions of the Soul from the outside
you can take some action
Well it seems that it is even more like correlating actions
than for example corrective ones

in here it is important
It is the optical system that is more of a correlation system

so when you start to see
Well For example there is a physical person there
when he sees himself from the side in the mirror
he can, for example, make an assessment of the appearance yes
or take some action

the same thing you see from the outside
action of the Soul
then it's roughly the same as touching
it's quite difficult to see the image in the mirror
but also to achieve control speed
well, which exists from the Soul
also difficult at first glance
although in fact due to Thinking
can the speed be equalized

i.e. the speed of action of the Soul and the speed of Thinking

and when you start to equalize

here I am practically showing the way
how the Soul works
The soul always shows the way
to any other system of your personality

i.e. it is enough to consider this point of view
as a Macro Salvation action
and the sphere of Thinking is located
precisely in Macroaccess i.e. in Macromanagement

and that's when your sphere of Thinking
is located in the control center
Well let's say on top of some mountain where there is Macromanagement
Moreover, at the level you can place any physical mountain

and see how thought interacts with a stone, for example , yes
i.e. try to understand the structure of interaction with Reality
By the way, this is very clearly felt
and it is immediately clear that your thought is really here

i.e. here is the management training related to that
how thought begins to interact

for example with vegetation
with some elements of physical Reality

This training shows
that any element of Reality
is in the control center from the point of view of the Soul

so for God any system of governance
is located at the center of His actual control
i.e. exactly the center that He recognizes
God

It has Macro access in its operation.
into all elements of Reality
and of course he should have maximum control functions
bring into your control system

it turns out that when you, from the point of view of this approach,
do management
for example, healing from diseases
or there is an improvement in health
where in the forecast it is absolutely clearly visible
that you are in perfect health
and normal events

this is the management structure
those. Macro sense and Macro control

this is an internal level
which creates the human body
but as if completely unnoticeable for you

i.e. you start to see
what is your thought that interacts
at the level of Macro Access Macro Control
with the external environment
precisely in terms of Infinite development

and it interacts
almost very clear to you
from the point of view of complete harmony for herself first of all
i.e. the thought is harmonious in itself
this idea is realized in this case

you see that your physical body
is created, among other things, by Thinking
as if first of all by such a level of "soft" Thinking

i.e. Thinking having ^{means} that nature
when you can feel that the wave of Thinking
as if passing through a part of the body
and you feel it later
that your thought touched your body

i.e. you learn to recognize the optics of Thinking

in this case the first parameter is that level
when you should logically know
that when the thought that is conveyed to you
went inside ^{yes for example} bodies
, for example, after some time ^{there} in ten seconds
see where she went

i.e. first the thought passes
action of the Soul ^{yes}
original construction of thought
must work as a structure of the Soul's action

and then you can recognize
where the thought touched exactly what part of the body

and since these are more often spherical structures
then firstly, it's not difficult to imagine logically

but when you start to see
then this is the glow of your Thinking
this is access to one's own physical body

it turns out that then already having seen
where the thought passed ^{suppose} the structure of the body
it is possible to perceive this information
i.e. to obtain practically exact data
what is in this body structure

and here you can already work with information from the past
increase the glow where it is needed
i.e. you can practically get the same effect here
what if when passing Thinking ^{yes}
or ^{there} are forms of thought
through your physical body
the thought somewhere collided with a system ^{that was somehow} somewhat different
than is laid down in the canonical level
in any form of information ^{yes}
some Norma

i.e. this is also embedded in the thought
The norm of your health and the norm of your events

and so when you start diagnosing
actually your own body
you can the optics that were recognized in this way
just to make it more active
and you will get a healing effect

and in this regard, such management can be done here
that when you do Thinking
similarly to the external system
for example, what is diagnostics of a nuclear power plant or an airplane
this is an external system
Well, I mean any technical system diagnostics

in this case we are dealing first of all with that
that when exactly the optical level
which in your Perception is clear to you
here at the level of the Soul first of all
this level it has the appearance of some kind of light yes
coming from the object into Reality

and when you with your Thinking
touch this light
as a rule, we are talking about that
that you can simply output the controls vertically
somehow move it either higher or lower
i.e. how to adjust the system of Perception

then here you get
almost complete control over the Reality of those
that you understand what is happening in this system

i.e. through Thinking
this is one of the levels of obtaining information
thought brought to the point of knowledge
to the point of "fence" of information, as it were
it gives the information that is needed
for some control of the Reality object

so in this case
in order to practically apply this technology

the next level needs to be done
it is in management

i.e. to reveal the structure of the Soul's action
see how your Spirit interacts
at the level of interaction with God
by construction means the system of the future Reality

i.e. look at the Spiritual aspect
of your Infinite action
and in Infinity you are in any case
come into contact with the action of God

and when you start to see
these are exactly the basics that I said
then they should be set up initially
in this control system
then your system of Thinking it becomes
Well, first of all, it is the same and remains the same
but is already becoming a manager
because you work
certain control systems
Well as if around her

i.e. you start making the management like this
that in principle denotes as if a control field yes
to reveal at the level of the Soul of the Spirit of Consciousness
where is your thought
and you get the control effect already from Thinking
and at the same time this control effect is like this
that you can quite easily get control
comparable to what you control , for example
at the level of Spiritual knowledge at the level of Spiritual management
or for example directly control the Soul

because when we look at
technology of Thinking where there are processes that are often very complex
because through the structure of Thinking
have to be processed
often quite specific and directly related to the person
questions

so when we start working
in the sphere of Thinking as in the system of Macromanagement
then this is quite a useful sometimes necessary often system

when any level of Thinking control
this is the control level
as per Macrotask
and at the same time
to resolve issues

i.e. in fact the optics of Thinking
which generally speaking is often a kind of analysis yes
just as an analysis of the situation
constantly works to ensure that you receive in the future
namely target management

Well, actually it looks like this
that there is some kind of your own supervision of the action
and you any action of Thinking
so as not to lose there for example time yes
bring all the time to the target level

but that's exactly how thought itself is structured
i.e. the thought is structured in such a way that each subsequent action
this is an action that actually takes into account
previous control systems
and at the same time allows you to practically get
next management status

and at the same time you get that
that the concentration of light is always directed
for the purpose of management

logically it is clear
having identified the goal of management in the form of a certain sphere
and making control near the physical body for example
and the physical body
and the structure of your Consciousness Soul Spirit
and even here the Action of God can be seen
everything is aimed at solving the issue
and help from other people

and that's when you start to see
how other people help
how does the process happen means facilitating yes
your management level
then here again a very important aspect is that
that you should see the management structure like this
can God see this system, for example?

i.e. you should see
that receiving information from Thinking from other people
this is a development system

because when a person thinks
he can see some constructions of the future
he can ^{mean} doing a systems analysis
earlier situations
where there are correct conclusions simply

i.e. there are a lot of logical systems here
more identified as systems of logical development
but directed systems

i.e. not everything can be considered
only as a direct control system
you can use the so-called analytics
which arises from the system of action of Thinking

that's exactly the analytics of Thinking, ^{for example,} briefly if we call it
then there are also systems of fairly correct action

and here it turns out
there are many very intensive levels of knowledge transfer
because a lot of information is in books
in the form of conventional media
and here, ^{in general,} it is used more often
mechanism of thinking

so when we start to detail
control system
^{for example} there are many books we need to go through them
Macro Management System

then we see that based on this
we can do it
from a large number ^{of generally} any books
^{for example} a simple task
there is a library where there are completely different books

we need to use
logical control status thus
that all the knowledge that is accumulated
in the form of analytical knowledge , ^{for example}

received by other people
and are there correct thoughts?
there for centuries or millennia
were formed in the form of a management system

and we need to make sure that this system
also Thinking is practically a system
so she worked for Macrosalvation

then it turns out we need to identify
in the whole system of knowledge, as it were, a control loop yes
of this system

i.e. well, what from this library for example Yes
This is the first control level

in principle, it's quite simple from here on
a signal is detected
which is correlated again in optics
with Macro Access system

This is a very clear signal
it's easy to recognize it
it glows well for example, often several thousand times stronger
than any other background signal, for example.

and that's when we start doing the analysis
how to use let's say apply it this way
the system is already getting Macrothinking yes
after all, this happens there too
that collective forms of Thinking arise
some collective management systems

in order to carry out Macrosalvation
We just need to bring these two spheres closer together

i.e. take the sphere of Macrosalvation
The reality of Macrosalvation is so let's say
and bring closer to the system of collective Thinking
where are these thoughts also
perhaps they are not explicit

i.e. it is a certain technology
which allows for methodological security
some region and then there is no macro-catastrophe, etc.

and then we can already consider

as far as Macrosalvation is concerned

i.e. it becomes very clearly visible
what was meant in this case ^{yes}
on the first level, second, etc.

and then any thought
i.e. any text, any letter ^{there} literally
can be brought to the sphere of Macrosalvation
literally mechanically

but in reality it looks like this on the Spirit
that there is a very intensive exchange of information
between a single letter of text
and ^{for example} the Macro level of Salvation

and when you start to see this process here
then it becomes very clear
absolutely like cooking
documentation creatively ^{for example} Yes
any document
let it be some technicality
a system for describing any technical quantity

but when we enter there
it is the creative potential of Macrosalvation
the document becomes interesting ^{yes}
you can work with him
a person has a structure ^{such as} self-regeneration
and can convey the knowledge of Macrosalvation through the document
because he either perceived it or he created it

i.e. and when do we start
element of perception and creation ^{yes}
in terms of Macrosalvation, ^{well} how to differentiate
as a system of simple information exchange
then it is clear that we are approaching the level
where God gives precisely the universal knowledge of Salvation
in any action in any text in any thought
and ^{generally speaking} in any Reality

and here it turns out perfectly
one common link for all people
where Thinking has a universal nature
I just showed one of the links
universal nature of Thinking

i.e. Thinking has the property
absolutely universal action
for the aspects of Macrosalvation

but in principle the universality itself is in that
that Thinking is necessary Macro regulation
happens somewhere in optics
because any optical phase undergoes Macrosalvation

if a person produces some control systems
through Thinking
he still goes through these systems
Well as if regardless
how he wants to do it
or he does this for example
as if from the point of view of some strategic tasks, yes
where the system of Thinking may not be immediately apparent
but the position of future aspects is more visible

nevertheless there are those Laws
which every thought passes through
and any person
at the level of fundamental knowledge this does

so when you start to see
the system of Legislative connections here in the structure of Thinking
then it is clear that one thought interacts with another thought
according to certain laws

i.e. for example, the thought of one person with the thought of another
interacts according to the Laws
if there let's assume by movement
for example if your thought develops clockwise yes
sphere
then a person at a distance of a hundred kilometers
his thoughts are already beginning to develop against

i.e. there is a reverse transfer of the signal

if closer it is an arbitrary system

this is exactly where it is
complete freedom of thought given by God
that there are certain points
where absolutely everything looks very strictly canonical
and the laws there practically do not change
they don't depend on time or the situation, even by the way

i.e. if we take Thinking 3,000 years ago
it's the same there
2,000 years the same Laws

it's just a right to choose yes
thought works as a system of your development
i.e. your personality is determined by Thinking
in this coordinate system

and you can through Thinking
make some free decisions
at any point

and that's when we find out
The laws of interaction of these systems
as if for myself
i.e. we begin to identify
like for example one of your thoughts
interacts with your other thought

It's very simple here
as a rule vectoriality well for example, the movement of a sphere
all the time clockwise
this is how you can determine
that your thought is about the same
if you are doing an analysis of some complex situation
to understand some connections
which, for example, are not very clearly identified , but immediately logically
you just have to look at it on an optical level
what thoughts are the same well so they work, so to speak

you need to identify the same size first
means uniformity of structure
and then movement, for example, clockwise

then the connections are visible
for example , are difficult or impossible to identify logically

i.e. you can see the connections
which are defined, for example, by third quantities
and this is where they develop controlling clairvoyance
you start to see clearly
to a greater extent, prognostication first
i.e. what will be obtained from this value

and then you can already do it through volitional control

introduce the Thinking for the Future framework
i.e. take the same way and twist the spheres and go ahead

these spheres at first seem to be neutral
because they were created by you
in order to recognize for example Yes
or somehow optimize the management process

after some time you start
receive accurate information on the management process

because in the sphere of Thinking
it is precisely the accuracy of obtaining information
this is an important value

and when you start thinking
that's when you get this information
in general, how will she come ? for example where it will come from

then here you can see
that after some time
a simply informative situation arises
that you understand this yes element of knowledge
well, in the form of a vertical one
if we somehow consider this flow optically
maybe it's some kind of vertical flow
and you
well, some kind of optical vertical glow
like a column, just some kind of glowing

but this is ambiguous, of course, only this design
more often it may be that there are no optical manifestations
but you know what I'm talking about
you understand that this is exactly the information you need

and here you can see that you work very closely
at the level of the Soul Spirit Consciousness body physical body
and that means the information is quite important for you

that's why there are fewer signs
means some autonomous or different action
i.e. the less you see , for example , sources of information
the more relevant this information is for you

because when there is some kind of pressure situation
then as a rule one signal is visible
there is no such special analysis there

Well if there is a nuclear power plant explosion or a plane crashes there
then it is clear that
or it may fall more accurately in the future
then it is clear that the management structure is completely unambiguous

we first take it as a single impulse
single source of control
and we begin to counteract or do so
so that this negative action does not occur

then it turns out
that's when the density of external pressure is maximum
and there is no differentiation of signals, for example
it turns out that this is more or less such a situation , so to speak
which needs to be dealt with immediately

and here is the difference from the point of view of Macromanagement
in any case, macro-sustainable development will be achieved
there will be no global catastrophe

to achieve this systematically
need to separate the Macro control signal
from some kind of pressure situation yes
that this situation is resolved because
what have you covered with Macroaction

so now make such control
take the sphere of Macroaction i.e. Macrosalvation
and close any
first of all, the most pressing of your situations
with this sphere of soft glow
where there is a favorable future for all, moreover

when you do management
look at the fundamental meaning of this situation
why did the difficulty actually arise?

after all, human thinking is aimed at that
to solve the current situation yes

it is clear that there are many systems with some problems there
great potential of nuclear weapons, etc.
this is also information that of course has an impact yes
and we make sure that it doesn't destroy people
it will not destroy in the forecast it is known

but for this you need to take a systematic approach
i.e. for this it is necessary to do it this way
so that the action means Salvation yes
or there was such an action of Macromanagement
what do you see means where is the source of this situation
must understand why you implemented this situation
for yourself from the point of view of your Soul

here from the point of view of Macromanagement
Thinking allows for comparative analysis
i.e. you see your thought interacting
with some for example Yes there is a difficult situation there

and you begin to see the reasons
especially when you are doing Macro Salvation
so there are reasons at the Macro level yes
there are some external regulatory systems
Well, which in general are less problematic
they are far away and you can work with them

and if for example the situation is similar
then it turns out that here we need to identify the whole complex of reasons
which generally lead to one problem or another

from the point of view of the technology of Eternal development
Often you need to either make a quick decision
which, for example, solves the situation quickly
or you have to do something
some kind of systemic action that is aimed at that
that you reveal your status in Infinity
and you don't need to do anything right now , really quickly

i.e. here we must first of all understand
or is it a dynamic reaction system yes
or it is a system of knowledge that allows you
due to the statics of what you see is the right solution
and you kind of control it through [...]
level the playing field
i.e. if fast or multi-component ones are needed
external situations

i.e. it is enough to work for your system [...]
for you [...] you must understand this
that you saw the real system of the future
then your Thinking turns out
this is Thinking is the same as now but there

i.e. to recognize the structure of the future
Where [...]

enough means this one like this let's say
external control system there knowledge
have

it is not necessary that you should think the same thing
be in the same place
but there must be some kind of universal mechanism
which is nevertheless recognized as a mechanism of Thinking

because when you are, for example, in a state of rest, yes
and your forecast phase is known to you
that is, a certain core that does not change over time
it means that you have successfully overcome the situation

then the external situation becomes simpler

that's why, for example, it's clear that there will be no macro-destruction
because firstly it is visible
i.e. I can see it personally
you can see that this will not happen

so that everyone can see it, for example Yes
or those who just want to see it faster
here, first of all, it is clear that this is originally so

i.e. there is a level that says that
that yes, this is so because everyone has this knowledge
Well, everyone has them somewhere, yes
as if the level of such Infinite confidence

so in the sphere of Thinking there is
so so let's say a vertical column actually
sometimes it is horizontal and changes position
but it is precisely in the first impulse of Perception
this is exactly vertical

here 's an idea for example
when you start scanning it
your own thought for example
if within the ethical limits in terms of general work there
so that there is no explosion at the nuclear power plant, etc.
you can look at another person's thoughts
and see that it's basically the same thing there
vertical system

if a person hides his thoughts
then in principle, except for God, it is still real
It's quite difficult to fully recognize

or if it is a completely personal and creative thought
it is not recognizable
if the thought, for example, is of course problematic, it is , for example, aggressive, it
represents a threat to society there [...]
By the way, it is recognized very easily
and that's when you
or there are threats there to you personally, for example Yes

so that's when you start watching
it is precisely this vertical status of management
then here all of these are practically visible
i.e. what is the idea
what will be the consequence of Thinking

or the event structure will be
brought into line with the idea of yes
or not

because after all, Thinking is Thinking
and the event structure can be different

and here a structure like this arises
you can take it at the expense
it is precisely the implementation of this level of management
how to create for example a thought in the heart

and through Thinking with the Heart look at the event
i.e. here is Thinking
and can you see what will happen in the event

how does Thinking interact with an event in general
or events of this person
or there is a management goal

and then it will be clear how to interact
i.e. either you skip this structure of Thinking
i.e. you don't work with her
either you work very precisely for a long time or there for a very long time yes

although it would seem there is only one thought
and it can be completely linear there

and because it is decisive

Well for example, to avoid an explosion at a nuclear power plant
it's often, for example, some one defect yes
very simple but this is a fundamental event

and it turns out that in order to prevent a plane from crashing there
it's enough to know something ahead
some specific event
that this is an external event or is this some kind of defect yes
or it's a problem with the pilot, etc.
this problem is basically one

this applies to any level of management
here is a difficult problem
as a rule, it has a very precise level
and as a rule it has
as if by a counteraction completely revealed yes

it turns out to save everyone
you just need those vectors
well, which act on Thinking linearly
as if trying to displace freedom

your creative thinking
these vectors are just for starters
restructure transform to your advantage

i.e. here is the destruction system
or is there some kind of restructuring system?
which may not be constructive
it has a linear glow

and work through Thinking
bring this system to the Norm of Eternal Development
give the same level of Infinite development
it is possible due to the fact that you are their linear actions
transform again into spheres
which are beneficial for everyone and for them first of all yes

and it turns out that you are like this
you can align any system
external may even be aggressive management

then it turns out that due to Thinking we can
first of all, recognize
i.e. this is an optical level

it is possible to raise it at the level of sensory perception
and here is this vertical column
which is precisely the universal pillar
for all systems of Thinking
this is the level that reproduces the thought itself
almost in the place where the thought is
where did you perceive it

this is an important characteristic of thought in general
that thought can be reproduced
element located well as if outside of you

but logically it's simple
that your Soul is present everywhere
at the level of Macrosystems at the level of Macroconnections

so it turns out that you just see
action of the Soul
but how can it be that the Soul put the thought
somewhere a long time ago in the Endless Time
and you're just dating her now

therefore in the creation of your thought
your Soul is involved
sometimes at an earlier time

i.e. not all processes occur in real time
Well , if we talk about the logical level
Of course there are plans that are being implemented yes For example
and which are performed depending on time
it is generally clear that the logical status of control
is being gradually implemented

but here we need to pay more attention
it is precisely to mean the governing status
i.e. concentrate on that
what you should identify in any system
true principle of management

i.e. you can, for example, see that the car is moving
and consider that there is a different reason
and is it possible to drive it knowing the structure of the machine

kind of not visible here
the point of view of physical Reality or analysis
you always need to identify this core level
which is absolutely unique for everyone

and the same at the same time

and here is the Action of God in His Thought
i.e. God's Thinking that is given to people to see

here you see
which is very easy to understand by the way, this system
because the Thought of God
where is there for example the Eternally Living Man
this is for example a person
Thinking coincides with the person himself

but for a person
this level is actually quite unique
i.e. if you just ask such a question
what Thinking
and from this man arose
here there is still a level of freedom of choice for a person

a person's personality is chosen initially
so before the Thought of God
in general, that's how it turned out, yes So let's say
the man took part in self-construction somewhere
in the structure of God's Thought

and before that he must have
your own independent thought
should have had
that's exactly how it was

so it turns out that this is the core level
what was this level of the original organization of Thinking
this is an autonomous point of the world

i.e. the person also took part
in the creation of a specific structure of the World
some micromolecule of an atom, etc.

and that's when a person begins to understand this
he understands that yes it was his decision
and then there is a process of simultaneous creation

the only difference is that for God
the future is all Infinite it is also close
such as there is the current yes if the past

and a person

Well, he put his position in Perception
that perceives some positions
in terms of choice
current time
future

and here is the analytics
which connects the past and time
current future
in Human Thinking
that's exactly the process of analytics itself, it's built the same way
how does god do it

now if we start to see this structure
then we see that how do we organize ourselves at all?
our physical body
at the moment of Thinking

here is such a heartfelt direct connection
between Thinking and the physical body

logically it's clear again
from the point of view of freedom of choice of any person
that when a person walks down the street
he can either carefully cross the crossing
or he can take a risk and go somewhere on the road from above
i.e. creating for yourself a series of some additional situations

Well, basically it turns out like this here
that these situations are not initially problematic at all
i.e. God bless you

but nevertheless it creates some tension
here in some connections in the collective Consciousness
there is a transition, etc.

but it happens that a person is in a hurry and it is completely safe
then there are no problems, he crosses the road from above, etc.
there are a lot of nuances here

and it turns out that when we start to analyze
this is precisely the structure of a kind of promising future Thinking
how to think correctly in general

God created the whole world
and He has a completely stable position
in Infinite Development

i.e. correctness is embedded in the personal aspect of God
He created and He gives knowledge

it turns out that a person should do the same
it is possible to transfer knowledge yes
so that he doesn't have any unfavorable situations

i.e. here is a system of knowledge transfer
it is a system of action after all
i.e. actions with their tasks
well, for example, current ones or future ones

but first of all of course
constant interaction
with the system of future events

and this is the level of interaction
which arises as a system of some kind of pressure, yes
this is the first frontal system
which corresponds precisely to the structure of Thinking

i.e. a person perceives
the first wave of future events
through the structure of one's own thought

i.e. the texture is like this let's say matter of this system
from God's point of view they are the same

here on the one hand
a person actually creates a thought and gives birth to his own
but on the other hand it is right that he perceives
own thought
he also participated in the creation of this element of the World

Well, from his position he participated somehow

so it turns out that he perceives
your own work
and there is also a system of Thinking embedded there

so the idea was there from the beginning
actually reproduced by man
it's the same in all systems
i.e. in Thinking there is no time
I just logically came to this

it turns out that you really can see
structure
you can look at the future and say
what do you mean such and such a process

but here's how let's say
that time exists in Thinking
this is the same value that corresponds to
just elements of your Perception

it turns out that any structure
brought out into the structure of Perception
becomes temporary as soon as you relate
with a physical body

here time moves
but you think that at this moment you have done something here
you can write it down for example
and after some time here

or you perceived something then there is a time aspect
you can write down the time there

so that's when you start analyzing
you don't even have to write it down
you can just understand it on a certain level
at the level of the Spirit of Spiritual knowledge

and it turns out that the Spirit gives to everyone
favorable development of all situations
it still leads all people's situations to that
that sooner or later they still understand
what for example there is a peaceful development system
this is a system of just stable status

it will be like that in any case
The world will develop peacefully
i.e. at the Infinite level of development
there is only a stable system
where is your action now i.e. well defined by time yes For example
and your action which means it comes to you from the future
this is a system where you don't just build
but you understand how you do it

that's why you understand how you do in some situation
because you've done it so often already

and you actually come to your own knowledge simply
you kind of remember them , it immediately becomes clear to you
that this is how it can sometimes look unusual
because there is a large system of knowledge there
it would seem that you need some items
maybe know
some Realities to understand something additionally
and you still know

and this is the level of knowledge
this is exactly the point where you are together with God
built this system of Reality

and this concept of "jointly" is absolutely clear
there is something that you specifically did
literally a specific element of matter
and what is done by God in general

it turns out that in order to do something similar to that
as God does
you just need to make some level of Macro access
Well, maybe it's not always like that let's say it straight away

however, if we set such a task
then it is solved in this way
that you begin to see God in action but as a person
that's exactly how a person's personality is

and then it becomes completely clear to you
that in principle there is nothing particularly complicated there let's assume
in Infinite development from the point of view of Thinking there is no

i.e. the thought is brought to the level of that
what is logically perceived
that Infinite development is the Norm
and there are mechanisms, i.e. there are systems of interaction
even within the framework of Thinking

i.e. this means that it is possible to concentrate Thinking in this way let's say yes to the
power of thinking

what's inside it
always find a way out to Infinite development

i.e. there are no hopeless situations
you can concentrate control very strongly
and always find control

at the level of Eternal development

By the way, this methodology can be very helpful
in the treatment of complex or severe diseases
when control is set
that in any case this doesn't really happen
the main amount of time ^{yes}
applied to some control

and now the sphere of Thinking begins to stabilize
this is how it can be determined
that the sphere of Thinking which determines
control system
she's starting to get tougher

i.e. although this is , well , generally perceived as a sphere
but if we compare the density of concentration
Well let's say information from the point of view of external analytics
there is **Spiritual control**
and therefore in relation to the stone there became
this is many times greater concentration even density
there is a very important value here

in the structure of Thinking one can do analysis
even by physical densities

and when you start to see it
you understand that to build a body ^{there}
to restore some kind of cell ^{there for example yes}
to any other person, at any distance
It's actually not that difficult
but when it comes to one cell
or ^{is it} just about improving the health of one organism ?
human
or you can heal animals and plants ^{there}

the question is of course also very good
This must be done ^{and} help all people
but essentially for Eternal development
everyone needs to do it at roughly the same time
this vertical column is universal several Thinking
it has the property of accumulating positive information

and it turns out to be a universal level
which is accessible to everyone
this is what a person freely gives to everyone in the form of knowledge

i.e. no one is going to and no one is taking from him
seem to interfere with his thoughts
does not take the knowledge that he does not give personally

but the more knowledge he gave
the more aspects of management it begins to have
the more systems of interaction come to him , as it were

how God made the whole world at once
and the fact that he laid down a system that was, in general, practically the same
what is the reverse level of information
corresponds to his initial level

i.e. He gave all knowledge
and this knowledge becomes universal for everyone
and they go in a reverse wave to the same point

i.e. the personal element of the creation of the World
consists in the fact that
that God actually created Reality
of a personal nature and type

i.e. any knowledge system interacts
precisely with His Personality
and the system understands one way or another
the person understands this clearly
so he can act the same way
act technologically exactly as God acts
at least in the basic elements
which concern Macrosalvation

other systems that
For example there are some elements of the Microlevel of the Macroworld
they interact in a similar way
they provide knowledge to a person
i.e. they are carriers
and in the general element of development , as it were
from the point of view
in one element of God's development

if for example God wanted to consider
just one element of development
took and chose and said that this is one element of development
and how is it here at such an autonomous level

although the element is connected clearly
with all other elements of Reality
nevertheless

so then it turns out that here
he can just ask the person

here is the simplest question
why did one person ask another
and gets all the information

because it can take a long time to analyze
You can analyze whole worlds ^{there}
write different formulas, etc.

but just ask and all the information is clear

the same as from God's point of view
The world was stable in its Infinite development
the individual must have universal knowledge

for this it is enough for God to look at the personality
and all the knowledge of the World is visible
and by the way not
God understands everything anyway, but in general, another person

i.e. if you look at a person the way God looks
all knowledge of the world is visible
you can watch it at the same time
just for a universal person
not necessarily on someone in particular

but then if you look at the universal
and not to know the development of all people
then we get somewhere around one percent of knowledge
if for a specific person then ninety-nine or one hundred
depending on where he is still a specialist ^{yes}
this person

if from the point of view of Macrodevelopment
every person has knowledge of Macrosalvation

the concept of "look"
I mean to pass on knowledge
that's how you can look at a person ^{anyway}
at that level of management

it means to take and pass on knowledge to him

For example there according to Eternal development

and then if he considers it possible for himself

take this knowledge at the moment

then it immediately becomes clear to you what is happening in the World

so as a rule people immediately take knowledge

and begin to spread

here is my "Management Practice"

who begins to possess technology

even just starting to do some first elements

it instantly spreads so much

that as if he himself becomes even more present in the information

Well, it's not very visible

Well how can one figuratively call this situation

which is sort of "buried" in the distribution system

very powerful of these spheres of knowledge

i.e. maybe he himself does not always perceive this information

exactly the same way the person who starts doing it

but as a rule, almost all the time

I haven't even come across any exceptions

if a person has achieved through management

elementary primary action

even the smallest one

there in a second in a millisecond

is being overgrown with a system of information dissemination

and later he starts to approach

to your own frequently thought tasks

and sometimes perceives them as new knowledge

although in reality due to the fact that he passed it on to others he

they just grow there

elements of additional structures

additional stability

because Thinking is like that let's say a feeling yes

Thinking is alive and developing

it has properties even for this optics

may mean Well, somehow they are connected

some other systems

which is already more analytics

or some specific events
these systems practically transfer knowledge to a person

then he may not differentiate
your own thought definitely

and consider that this is some new knowledge

that is why the task is precisely differentiation
own thoughts
the task of accuracy of information transmission
from one's own Thinking
this is quite an important task
it allows you to not do unnecessary work
it is enough to differentiate that you already know it
and additional thoughts

Well, in general, you can accept them, for example Yes
so you can somehow use it for analysis in the future

i.e. the principle of free will here lies in this
that own Thinking
own sphere of Thinking
it is believed that it is largely determined by you personally

i.e. you first perceived something at the level of complete freedom
then they restructured it into management
and then got their own idea

i.e. it should be more under control , yes
and so it is that a person trusts his own thoughts

and therefore when he, let's say, has this trust
at least one can say that often
so he analyzes of course some of his own thoughts
but when he is clearly convinced
that the thought he reproduced is accurate
and it is in this control system

For example there through Macro access Macro regulation
gets precise concentration on target
and he knows what to do and his path is completely clear

after all, a person's own Thinking is closer to him, yes
here on a certain aspect

so that the Thinking of all people at the Macro level
was equally close to everyone
i.e. it turns out to be a general idea yes

general idea of Eternal development
it is necessary to differentiate your thought
in the system of general knowledge as its own
but at the same time as a thought constantly transmitting something
or at least a thought
which means it has the properties of fixing your confidence
For example there about Eternal development

well, some creative systems of further actions

i.e. here you can identify the structure
where thoughts generally interact

here are all the information systems if you break them down into classes yes
there is just information
information of the action of the Soul information of the Spirit etc. Consciousness
Well, people do meet, yes
physical implementation level

then in the system of Thinking
there is a space where it is mainly realized
it is the interaction of thoughts

and it turns out that here
well, a certain one, if I may say so
telepathic channel exists
by the possibilities of information transfer
and due to this it is enough to think of something
how another person's thought will immediately react
and he understands at any distance

and that's when you start
Well, this system needs to be brought to the management level.
then here it is very simple, it becomes very harmonious
level of the external world
i.e. external Reality acquires for you
more harmonious sometimes
often it is a truly harmonious shade
and often this is the harmony of the World
when due to Thinking, and collective Thinking at that
when you are in a system where there is Thinking of all people
it is free

p here you get that system of knowledge
that the World becomes more understandable or understandable at all
so from the point of view of controllability yes in Infinite development

to every person

that's when you start seeing it in the future
that means you clearly see that although you ^{yes}
have your own system of Thinking
you can have your own knowledge transfer system

nevertheless convey the creative aspect of thought
you can always

i.e. there are always people
who can do the management correctly
and then this is where the real system comes in
well, some kind of creative peace ^{or something}

i.e. when a person believes that
and sees that the thought is completely under his control
that the entire external world interacts
and the future is under control
because people understand what to do
i.e. all people understand what to do
at the level of Thinking at the level of management
maybe they are not specifically thinking about some technologies ^{there}
but they are at the level of the heart, ^{for example}
perceive accurate information about the future
what does the World ^{mean} exactly Eternally developing
that there are systems for their future development ^{there}
in an hour, a day, a hundred years ^{there} , etc.

and it turns out that this is the level
this is essentially a structure that forms
this is the vertical rod

i.e. it turns out that this vertical rod
this is a system of actually collective level of Thinking
and the vertical rod of thought is on this system

logically it is clear
that from the point of view of the general properties of the system
there is a collective system on which ^{yes} it is based
^{as if} a private level or investigative level

private is not an investigative level
and your personal one is just

here a thought cannot be a consequence as a rule
if she ^{well} ^{as if} created by some decision

from the point of view of the external situation

but there may be a consequence if there is some strict science there
like ^{there's} math or something like that
when one thing comes from another, etc.
then it turns out that we are saying that this is a consequence

however, a second passes and the consequence is for you
it is still your own perception

p it turns out that what we see next is
like this design
goes into the structure of personal management levels

in general how do people get knowledge
this is where the task lies

there is a certain system of knowledge, ^{yes}
a theorem or ^{some lemma} for example
and we see that we perceive it, it has been there for a hundred years
this theorem or lemma ^{means} ten years ago ^{yes}

but you perceive it personally now
^{for example, a hundred years ago it was understandable to you}
how she how she was perceived
after one year it turns out ^{further}
or ^{there} for one hundred and one years it is already a different system

i.e. it is possible by varying thoughts in the past
understand the true meaning
from the point of view of Macroreality of Macrosalvation

i.e. any level of information
it is possible due to the fact that you start to vary
structure of the past ^{yes}
this is how it is in the collective Consciousness
what is the point of Perception
^{as if} in the axis of the collective Consciousness of the time axis
matches yours better

then you can comprehend it very quickly
Well, in general, almost any science
to understand it ^{means faster} like this let's say ^{yes} for you personally
which makes more sense
just a fragment of Reality is highlighted
which is more understandable to you, more harmonious

for you and that's all
and you understand
this moment is literally

instead of studying something for hours
it's enough to just work with the time axis
in relation to this already linear and consequential concept

it turns out that you are, as it were, the investigative concept itself
well you're not doing it quite investigatively, you're processing it
and therefore any information can be processed in this way
i.e. the speed can be increased so much
that you will always reach a solution

you can, for example, if you need some areas
science or management
or knowledge of the same technologies of Thinking

interactions of systems of thinking
we can simply consider them according to the same principle
consider where they are located , for example
find some accumulation points
and no longer work with the management level itself
and already with optimization
i.e. practically at the level of optics yes

but understand the same thing
that you could be there for many days there for example, to master
and you just need to take a quick look there
and you understand everything

and it turns out that when you start using
with such a mechanism
you come to the next level of the Thinking device
in general Thinking in general as a system
here in this case as such
from your personality point of view

what are the levels of Perception
where your Thinking has
completely independent of you in nature

i.e. there is a point that is sort of external yes
a neutral point for you, as if neutral
and a process of some kind of generation occurs there
energy so to speak or optics of information
where is this process stable at a certain point

and it exists as if outside of you, yes
so you can define such an area

so this area is there
where your thought gives the maximum amount of knowledge
into the system of collective Consciousness

i.e. there is more transmission going on there
so the point is very stable

so the more knowledge you pass on
the more stable the event structure
which corresponds to your Thinking
it's just a logical conclusion

and it turns out that based on
from this control structure
you can solve some control systems
for example, the most remote ones there are some complex ones
some to keep under control there

bring some to the level of future decisions
but you can always enter
precisely at the level of Macrosalvation
i.e. to see that system of knowledge when you
in any situation for example yes, in any event
always have an event structure
and in this way you already regulate your Thinking
that you always find the optimal path of development

at the same time it is impossible to move you in any way
for example in the direction of their actions
because your Thinking is protected by that
what can you control
as the act of creating a thought
as well as the action that leads to the event
i.e. the realization of thought, for example, in Infinity
there in the future in a second an hour a day there etc.

and it turns out that when you start these values
in fact, yes let's say the characteristics of your personality
see as a simple control system
as some kind of stability yes

then Thinking already moves into the phase of action of the Soul
i.e. this is the structure of Soul management
stable phase some thought of the Soul understanding of the Soul

and understanding by the Soul is management

this is precisely harmonious Thinking and understanding by the Soul
these are comparable control systems

well, that is, it turns out there
that due to the intensive development of Thinking
it is precisely when Thinking actually becomes
essentially simply harmonious for all aspects of Reality
your Thinking
that is the action of the Soul and the action of Thinking
it's the same value

and then it turns out that these are future events by the way
they are absolutely clear
even if they are somehow unfavorable
they don't even arise at this level of your Thinking

i.e. you see that this concentration
it allows some unfavorable events to happen
you can't get close to any level of realizations

so now make such control
i.e. management of Thinking where you do
it is actually the level of harmonious Thinking
through the logical phase as I just explained
on today's seminar

and must see
that when you touch the Soul
with the level of one's own Soul
then we get a uniform optical concentration
and it doesn't come near you anymore
nor any kind
Well, some kind of situation that you don't need
or it is unfavorable

i.e. you must see that the situation is unfavorable
does not come near you

You work and I will work with you

in this technology
when I talk about some unfavorable situations
for example, you know there might be some list

and this also applies to healing
i.e. you do not allow the development of disease structures, etc.

but there are situations that, for example, you don't know
logically they can exist yes
what are they favorable or unfavorable
This can be differentiated by diagnostics

but it is precisely in the event diagnostics system
This technology allows you to immediately
unfavorable as if to take and move
to the level of a completely different management plan

i.e. these situations that all the time seem to not reach yes
your level of management
i.e. they are visible as systems
first in the logical level moved
For example there is a management goal somewhere there
in the form of a focus completely revealed
for example in the form of Soul optics

and some situations that you don't need
they move
in the form of just some optical expressions
sometimes grayish shades, etc.

but at the same time you understand that they will not come near you
because you hold
the necessary concentration of this type
as I explained now

and it turns out if you enter it here
management structure for example well related to that
that here is the documentation where you can write something
that you are engaged in any system
which, for example, is connected with you in exactly this way
that you practically have this concentration
try to keep it all the time
that there is no approach of some negative status yes
possible future events

or even past events
because past events can have an effect
well, something like this
that this is precisely the unfavorable status
which you perceived yes

sometime there, let's say you got a bad grade at school sometime there
and you got it completely in vain

and it turns out that when you start seeing this status
this is also some kind of unfavorable status, yes

so here are the properties let's say unfavorability
what for past events what for future
the same ones

and well, in principle, let's assume that we are talking about that
that some events of the past
which for example are unfavorable
in the information there are yes
or suddenly appear on the control horizon
then we need to work with them in the same way as with future events

i.e. the principle is absolutely the same
if we remove the time vector yes
from the control system
then it turns out that only the status of events exists

if we call an event
unfavorable or negative unnecessary there you
maybe it is not necessary to have this control, as it were ,
Well as if to relate only with some such negative
sharply unfavorable systems

this may apply to systems
which simply need correction

and you just need to adjust
some action
and in the future it will turn out that there is nothing particularly unfavorable
there was no

this is an important system
minimization of predictive negative functions

that's why there is a system of solved problems yes
i.e. yes they were unfavorable but you solved them

so when you work in one mass
and with past and future systems
then the past systems have

the property of transmitting information again
at the level of Thinking
You did them once

then general control mechanisms
affect your future designs

i.e. they help you understand absolutely nothing as if clearly quickly
and understand in almost detail
what can you do instant control then
whenever you want to do it

i.e. you can, for example, gain control practically
either get control there or everywhere
and at the same time, there is precisely a level of some unfavorability
he will already be absent
because you are already using the system of your experience
in management

and when do you start working like that
then it might be like this here
that the constructions of past events, for example, Yes
occur quite often

and it is not necessary that these are constructions
specifically related for example specifically
well, to some very unfavorable events there
or let's assume that maybe these are just some associative connections, yes

and here at the level of associations
when you already achieve control
well, literally at the level of associations

then you start to see
what does your management mean target yes
which you do means in this way
that even associations matter

i.e., as if in fact, a certain optical level of control
well some light yes
which is only reflected light
and even through it you begin to control

then this control is already really quite precise
then you don't have negative information
i.e. you just have some reflected light
which has only the properties of an event

and these properties can always be modified
because any element of control i.e. Thinking
can be changed

any structure of the light that comes to you

Well, not in a rigid form, yes

and it turns out that way thanks to the technology of Thinking
you can through controlled Thinking
you can change these systems before that
how they acquired a negative status

therefore it is clear that you manage creatively
you will have a favorable development

so it's absolutely clear
that there will be no macro-destruction of macro-catastrophe
you just have to work and learn to do it
but this is clear because there is a mechanism for such action
it is implemented but as a specific result

This concludes today's seminar.

Thank you very much for your attention
